The network newsgroups comp.os.386bsd.*, for example. Or any other magazine
that does not make money by pushing Linux, and thus writes blatant untruths
about *bsd.

That's the last one I've got, too! A new one WOULD be nice!

I DID get a postcard from them advertising their removable SyQuest drives for PCs, Macs, and STs, though... Some word is better than no word... And their ads in Current Notes are nice!

They're definitely still alive and still a great place to buy ST stuff, as are D&P computers, Rising Star, and STeve's...

1893. Adding/Replacing HD

Newsgroup: comp.sys.atari.st
Date: 1994-01-26 22:58:14 UTC
From: gregk@nskernel.tandem.com
Message-ID: <CK9EH3.AED@tandem.com>
Source record: 194056
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

I recently posted about disc compression programs - one of the responses suggested looking into a new or extra hard drive and that they can be picked up relatively cheaply, in particular, on misc.forsale.computers.

Okay, now I'm looking into what's involved in adding a HD or replacing my existing HD. I have a Supra 30Mb drive which I think has a Seagate ST138 drive and Seagate 138N controller. It also has a 25-pin port on the back with some instructions on how to make a cable for this port with a 50 pin (SCSI?) connector on the other end.

Is it possible for me to replace the drive in my system with an off-the-shelf SCSI drive? Does this involve getting a new controller as well? When I went to a local store yesterday, I noticed the drives have a 50-pin connector, but the controllers are more specific - like for a PC.

If I can't replace the drive inside my Supra, how do I attach another drive via the SCSI port on the back? Do I just need to buy a drive with power supply, make the cable I talked about above, and plug it in? Or do I also need to add a controller?

If I have other options, please let me know. I must say I'm not clear about what 'pieces' connect to the 50-pin SCSI connector, and where the controller fits in to the picture.

Thanks for your help, Greg.

Yes there is. You can get the index from cdrom.com, or just grab the
"gemcdrom.lzh" now at atari.archive.umich.edu (in /atari/Info), and look
in the file "INDEX.TXT".

For those that might be interested - there are two files at
atari.archive.umich.edu in the atari/New directory you might check out:

GEMCDROM.LZH : this has some information on Walnut Creek's
"Gemini CDROM for the Atari ST" - it includes an
index of files on the disc

LINELNKS.LZH : this text file contains the "S"register settings for
the Linelink 144e modem (which the company apparently
felt wasn't necessary to put in the user's manual) (nice
modem though :-)

I think the picture quality is better on that but it doesn't have stereo
speakers.

1903. DataLite

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 04:44:59 UTC
From: Joseph_Hogan@UQAC.UQuebec.CA
Message-ID: <9401270446.AA22863@infocom>
Source record: 194138

Hello,

I am thinking about getting DataLite, but I have a couple of
questions about it before I buy it.

Are files unsquished when copied from harddrive and put on a floppy?
As some files will be destined for non-DataLite systems.

Is there any problems while working with compression software
such as ARC, LZH, ZIP or ZOO, etc? I ask this because they are
different compression systems. I would think that DataLite would
work directly to the drive in Question, not while the other compression
program does it's thing in memory, but then, this is only a non-guru
computer user talking, so please, straighten me out:)

Do I ever have a way to get the files unsquished off my drives if
I happen to be in a situation where I don't have it working(no I can't
think of a situation)?

If I can get these questions answered, as well as any other comments
about it, I'd be happy to hear them:^)

Thanks in advance,

Joseph Hogan

Yes, files appear as normal to applications adn the desktop. Even most
disk editors don't know that the files are compressed.

There are no problems that I know of.

>Do I ever have a way to get the files unsquished off my drives if
>I happen to be in a situation where I don't have it working(no I can't
>think of a situation)?

I'm not sure what you mean.

The only thing to consider is that DataLite slows down disk access. Other
than that it's a *very* clever program and has a very nice interface.

>compliant.

Hmm... that's the beauty of standards.. there are so many to choose from!
:-) Which particular POSIX standard is it nearest to?

When people talk standards in the Unix world people generally are talking
about how close to de-facto standards something is. In this case Linux is
very non-standard as it is neither fish nor foul.. looking unlike SysVr3,
SysVr4 and BSD4.3, it's somewhere in between.

The spectrum of likeness is something like this:-

BSD 4.3
NetBSD,BSD/386,386BSD
|
SunOS 4.1.x (Solaris 1.x)
|
OSF/1
|
|
Linux
|
SunOS 5.x (Solaris 2.x)

SysVr4
|
|
Various PC Unixes
SysVr3

>These are my opinions only, based on what I have read and observed (no

Because, I can't take the output from a Speedo application and get it professionally printed.

Of course Speedo and PostScript can manage comparable quality on a 300 or 600 dpi laser, but what about high quality output? Which Speedo driver gives me resolution independent colour output that I can take to the bureau? PostScript is a portable industry standard.

Hi!

Has anybody seen a list of (older) games running on the Falcon 030?
Where can I get this list?

Does Dynablasters run on the Falcon? Perhaps with Backward etc.?

Ciao, Heiko.

Hi, I'm a Falcon 030 owner, and live in Zwolle. We do not seem to have many Falcon owners in Zwolle. If you own one and want to contact me, please send your adres and I will contact you.

Questions:

Does anybody know wether LamaZap written by Jeff Minter for the Falcon 030 exsists and can be bought?

Does anybody know why my copy of Nethack crashes the second time I play it? Might have something to do with running a mod player as accesoire at the same time. It seemed to corrupt a file of nethack, but I installed a new copy of my back-upand it didn't work anymore. Pleae help a I've almost finished Ishar II.

Does anybody know wether Ishar III will be released on the Falcon?

Does anybody know wether Ishar III will be released on the Falcon 030?

1913. AutoSwitch Overscan and SM124

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 10:43:47 UTC
From: michael@rz.fh-heilbronn.de
Message-ID: <2i85t3$i23@risc1.rz.fh-heilbronn.de>
Source record: 194146

Hi,

I would like to know about peoples' experiences with Overscan on an ST.
My main question is, does it slow down the machine at all?
If not it sounds too good to be true, to get all that extra screen for
that price. Also, any other major advantages or problems would be
appreciated.

Thanks,

Michael

1914. WordProcessor with Scalable Fonts

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 10:53:43 UTC
From: michael@rz.fh-heilbronn.de
Message-ID: <2i86fn$i23@risc1.rz.fh-heilbronn.de>
Source record: 194053

I'm looking to upgrade from 1st Wordplus to a wordprocessor with scalable fonts.
The choice to me seems to be between Calligrapher using its own system and buying
Speedo GDOS and a compatible WP.

Does anyone have any experience of both or either of these systems?

If using Speedo GDOS, which WPs are available? Does Speedo GDOS slow the machine down at all? (I have a Mega 2 ST with a hard drive, and find that the old GDOS slows down the whole machine). Does Speedo GDOS provide other graphic capabilities as well as font scaling?

Finally, what file formats can Calligrapher read/write.

Replies to any of the above would be appreciated (by email or posted here)

Thank you,

Michael

There is a program called STOSFX11 which can fix an already compiled
program to make it run on STs with TOS versions higher than 1.62
(I've even heard of it running on the FALCON and TT). BASICMJH
makes the editor and interpreter run on those newer TOSses.

Both programs are in atari.archive.umich.edu in
/atari/Languages/stosers.zip

1916. postscript gdos-driver

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 11:18:17 UTC
From: paralax7@unixen.hrz.uni-oldenburg.de
Message-ID: <2i87tp$ccm@aix11.hrz.uni-oldenburg.de>
Source record: 194147

The Word-Prozessor Calligrapher-Professional has a postscript gdos-driver, which is able to print on disk. The only problem (except the realy great postscript-files) is that the UNIX-machines at our university are not able to print them. And I do not know it is a error of the PS-File or the UNIX-Server.

Llamasoft are still around - address and phone number in any of the
docs for their shareware games.
-Hardcore is still unfinished I think.
-Andes Attack is ex-commercial and is available when you register
Llamatron. It's pretty slick but nothing special. -Better is
Defender II which was sold briefly by Arc (Atari). Llamasoft had a few
copies of these available for 10 pounds (?) a while back.
-Grid Runner is also available in return for registering another
product. See the Colourspace docs.

Well, the AV Macs are just Apple doing right what Atari managed to
fumble with the Falcon, and the PowerPC Macs are just fast Macs. No
memory protection and no real multitasking yet on the PowerPC version of
System 7; hardly innovative, just getting on a hot trend at the
beginning.

It probably slows the machine down by 1-2% which is not noticeable. It is
great to use, especially with DTP, WP and Cubase. The switching software
is briliant, any program that is not compatible can be set up so that
overscan is switched off when you load that program.

NS>come to the University for a week. I sent a message out on Monday, 24th
NS>Jan, but perhaps you didn't get it.
NS>I am definitely interested, send me more details: how old it is, what
NS>sort of use it's had, etc.
NS>How will we mail it? Which company is the best to use?
I replied but just found out it bounced. Put your address in all UPPER,
I'm hoping all small will work. The monitor is still for sale. It's
probably
4 years old (guess). I bought it from a guy that had a color monitor,
bought the
mono for doing CAD, then did CAD for about 8 hours and quit. So, it's seen
very little use. I used it about 20 hours before I decided to sell my ST.
I used it for MIDI in my house. We can mail UPS. It will cost about $5.00
to
send, maybe $7.50. If we do COD, then about $10. I"d like to accept the
$50 offer
and tack on $5 for shipping (regardless of method), I'll cover any
difference.
I'd really like to finalize the deal by voice. Either call me or reply with

your voice number. Here's the scoop on me:

> well, these two declarations are exactly equivalent. Read
^^^^^^^^^^^^^^^^^^
NOT.

>'the C programming language' by Kernighan and Ritchie, Chapter 5.3.
>It is all in there!

This still has nothing to do with c.s.a.s., but... if you indeed read K&R,
Ch 5.3, you would read that 'char p[]' and 'char *p' are equivalent **as formal
parameters in a function definition**, which is not the same as 'they are
equivalent'.
In a definition-context, the first declares a pointer to a char-array of
unknown size. The second declares a pointer to a char.

Take for example this simple program:

```
int main( void )
{
char p1[], *p2;
char s[] = "test";

p1 = s;
p2 = s;

return 0;
}
```

This will generate a compiler-error on the line 'p1 = s' -- something like
"Lvalue required in function main". In other words: p1 cannot be assigned to.

Please check what you're saying before posting wrong information that only
confuses other people.

>to display them. It is as if theyare all being displayed transparently ...

Easydraw, being an old GDOS program, will not know about any scaleable
fonts. It only knows about the font sizes listed in EXTEND.SYS, and
when it draws in Full Page scale, it just tries to set a bigger point
size. The solution then, is to add more point sizes to the EXTEND.SYS
file.

What does Geneva need to know about fonts? Will it let you change the
AES system font or something?

: There didn't seem to be an immediate goal either. Docking killed me
: the other half of the time, it was just too lame...why would the docking
: bay rotate?!?

: does Frontier have a goal? a plot?

: Please tell me all about this game, thanks.

There are two control methods. The first is the original method where left and right rotated the ship and up and down moved the ship up and down. The new optional methon is for the joystick to move the ship in the particular direction you move the joystics.

Frontier is inertia based rather than vecocity based and by this I mean the ships are rated in maximum accceleration rather in top speed. This is how it should be.

In the game you can choose what role you wish to play. In the original you can be either a pirate or trader. In the new one you can also join the millitary and there are many many more missions you can get involved in.

Oh yes if you do prefer to move the gun without moving the whole ship you can install turret guns which will point in all directions compared to the ship.

If you have any more questions then mail me.

1932. CVG (Calamus Vector Graphics) Format?

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 15:07:53 UTC
From: djs@jet.uk
Message-ID: <1994Jan27.150753.5561@jet.uk>
Source record: 194060

Is the CVG file format documented and publicly available?
The main reason that I ask is that I am having trouble with
compatibility between DA's Vektor and PageStream, and I am
currently unsure which to blame. It's usually PageStream's
fault in such cases, but DA's Vektor has it's share of
bugs and foibles too...

Message-ID: <94027.121129STIRRE31@MAINE.MAINE.EDU>
Source record: 194022

There's been quite a bit of talk about Jeff Minter's games.
The one game that I am looking forward to is Llamazap.
Has it been released? I thought that Atari was going to
to the marketing of it, but I haven't heard a thing about
it. Come to think of it, did Atari ever release any of their
promised STe-only games? There were also Falcon games promised,
but I haven't seen them. Was Humans ever released (was that
an Atari title?)? One more question: what games does the
Jaguar controller work with on the Falcon. On the box it
says that it works with certain games. Which ones? It would
be a nice second joystick, especially since it doesn't need
to be hooked up underneath the keyboard.
thanks,

Source record: 194097

I am very disappointed with Calligrapher - and I have really tried
to like. You _can_ produce excellent docs, but it is hard work. It
is still not 100% stable (but to be fair nor does it crash all that
often - but once is too much).
The font format is "private" - good luck getting a collection. You
can no longer even use GDOS fonts - and I bought the beast partly
because of that (the manual announced proudly "that the use of bit-
mapped fonts is no longer necessary nor supported :-( ).
The interface is clumsy, and not all the functions work. In addition,
Working Title no longer support it. Do you want a second-hand copy?
All my writing is done with Redacteur 4 - fabulous for creating
documents, and unbelievably fast, but the printing is not as elegant
as I would like - you can make things look good without much effort,
but not _great_. The perfect prog. would edit like Red4, and lay out
like Calamus SL.
Anybody have any comments about Papyrus (is it only in German?), or
AtariWorks?

>
>Does anyone have any experience of both or either of these systems?

There is a third choice: That's Write 2 plus C-Font 2. C-Font is an accessory that renders Calamus fonts and produces GDOS bitmaps. That's Write can use both GDOS fonts (without having GDOS installed) and the fonts installed in your printer.

By using the two together, you can have every font you need at the appropriate size. Most documents only use a few different point sizes (and if they don't you need to ask yourself why!)

I have tried to use Calligrapher but found it agonisingly slow on an 8MHz ST. The output is good, but the fonts are, well, "odd". And you're stuck with the ones you get with the package -- Working Title refused to release the font format details.

IMHO, That's Write's page and paragraph tagging facilities make it far, far better for medium to long documents requiring consistent layout. Calligrapher is OK for a flyer or leaflet, but I'd hate to have to use it for anything more.

I must disagree about Calligrapher. I have never had it crash on me, and I think it is a fantastic program. Which functions don't work for you? I think I've used almost everything it has to offer without any trouble whatsoever. I AM upset about the font situation though. I'd really like to see it use Speedo.

>The binding is a bind. The functions reference are in a strange order, so I
>have to look in the index first. The functions aren't started on a new page
>like they were in the old manuals,
These and others points I raised in the hisoft conference on CIX and it didn't receive a reply although several others agreed with my views. Take that how you like...

When the Addendum manuals for v5.5 came out I pointed out to Alex K that a rule or something to separate the functions would be in order and they are hard to find on a page in lower case with upper case subheadings (weird). He said he would think about that. Obviously, he didn't. The index also has many functions missing so we can't even rely on that to find them now they are split up into header file order...

Some functions are also missing from the main body - the '_*' Lattice functions like _toupper.

I also find the fact that we are charged extra for the MASS book which is nothing but program documentation IMHO hard to swallow.

Header files are still out of date. Take COOKIE.H. It needs the following added

```
/*
* added by MSB 29/12/93
*/

#define _OOL0x5f4f4f4c
#define MiNT0x4d694e54
#define _SLM0x5f534c4d
#define _INF0x5f494e46
#define _AKP0x5f414b50
#define _IDT0x5f494454
#define FSMC0x46534d43
#define PMMU 0x504d4d55
```

Some of these are mentioned in MASS but aren't in the header file!!

In the GDOS detection functions in VDI.H
#define GDOS_SPD0x5f535044/* _SPD */

needs to be added for SpeedoGDOS detection.

I'm sure there are other things, and I can't help feeling disappointed for my 60UKP!

Regards
Mark

If you're talking about my column, I don't think that's what I said. The
relevant text follows:

------------------------------cut here-----------------------------------

I was debating this very issue while writing GEMBench. Rightly or
otherwise, my conclusion was that a benchmark program should limit itself
to purely performing tasks. The memory tests in GEMBench simply reads the
computer's memory, the text and graphics test do just that. Any attempt to
immitate a 'real-life' situation as some benchmark utilities for the PC
do, is totally subjective and open to scrutiny. The downside of my
approach is that one has to read the figures with caution.

This seems like a simple enough question, but all my tinkering has produced no results so far. In the 1280x960 monochrome mode, is there any way to invert the screen so you get white foreground/black background instead of the current black on white? I *hate* looking at a white screen... Just flipping the bit in palette 0 has no effect.

1948. Lattice or Pure C?

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 20:11:22 UTC
From: dud@u.washington.edu
Message-ID: <2i975a$jrr@news.u.washington.edu>
Source record: 194005

I'm looking to get a new C compiler. Currently I have GCC set up on my TT, but I'm always having problems with it. Make doesn't work right, Man doesn't work right, I can't compile a lot of the things I want to, and I really like graphics interfaces much better. I have TCSH working under MTOS, which is nice, but it seems crash-prone...

So I've heard tha Lattice C and Pure C are good packages. Which is better? How do they work with graphics cards like the Nova that I have? How about Geneva, which I run nearly all the time? I know I'd be shelling out a few $$$...

Does anyone have one or the other that they'd be willing to sell? Or better yet trade for Caligrapher Professional 3.0 (the CodeHead version) + some $$$? Calligrapher is great, but it has some problems on the Nova, which I got just after buying it. :(

Let me know if any of you have any suggestions or ideas...

I'll be able to answer this question with figures soon (my MegaSTE is on the
way), but as a guess I would say that PC-Ditto would close to double in
speed at 16mHz w/cache, as alternate architecture emulation is very CPU
bound.

1950. Re: AutoSwitch Overscan and SM124

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 20:31:10 UTC
From: brobson@cix.compulink.co.uk
Message-ID: <CKB2Bz.564@cix.compulink.co.uk>
Source record: 194015

>I would like to know about peoples' experiences with Overscan on an ST.

I have had AutoSwitch Overscan installed for quite some time, and I
can thoroughly recommend it. I haven't noticed any speed decrease,
and if any program incompatibility is detected, the name of the program
can be entered in a file which Overscan interogates and automatically
switches back to 'normal' mode for the prescribed program.

I fitted an optional hardware switch to enable switching off the hardware,
but I think the only time I have had to disable it by this means was
in running Protar hard disk formatting utilities, the 'Protar Manager'
program I believe, which does not seem to like it being present.
I also found that the 'Turbo Mono ST' screen accelerator did not run with
Overscan (it gives a 'Turbo ST Does Not Support This Resolution' message)
but I am now using NVDI which runs with it with no problems at all.

My machine is a 1040STFM 4MB TOS2.06 and ICD 16MHz Accelerator, and I
find Overscan is compatible with this configuration.

Best Regards,
Brian

Before I got my aging Atari 520 ST repaired, it destroyed some of my favorite games, and I'm now trying to track these down. The ones I'm currently after are Phantasie I and II by SSI. Both disks for each of these games copy readily, and all I'm really after are working copies, though I'd certainly take originals as well. Just respond with a price in mind and I'll get right back to you. Thanks.

1953. Help! M68K Sprite Routine needed!!

Newsgroup: comp.sys.atari.st
Date: 1994-01-27 20:45:41 UTC
From: de500@cleveland.Freenet.Edu
Message-ID: <2i995l$6dt@usenet.INS.CWRU.Edu>
Source record: 194079

I am in need of some assistance. I have been generating sprites with
the Line-a opcodes, but they are just too slow. I am working in
M68K assembly code. I am tring to track down some assembly
source code that I could study to incorporate into my game.
I am woking on a Falcon in a four bit place mode (16 colors).
I have never programmed any sprite routines, so I am stuck.
If there is any source code that someone could E-mail me that
would be great!

I will also need to create a mask for the sprite images. The sprites
are 15 colors and very in size.

If anyone could point me in the right direction, I would be very
thankful!

If anyone is needing a detailed hardware map of the ST, TT, Falcon, and
misc machine, drop me a line.

Not to mention that the TRAP routine is somewhat weird!
C compilers put a RTS command at the end of a subroutine.
A TRAP routine is left with RTE!
Also dont put code into your TRAP handler that call
the operating system. TOS is not reentrant!
DON'T use printf, getchar and the like!

> Anybody have any comments about Papyrus (is it only in German?), or
>AtariWorks?

Well, since you asked...

I briefly got to play around with AtariWorks on a Falcon last year at a local
Atari-fest show. My opinion:

It reminded me of a very scaled down version of MS Word. About the same
functionality as those "all-in-one" integrated software packages that you
get if you buy a PC or a Mac (i.e. ClarisWorks, WindowWorks, et.al.)

Too bad. I was expecting great things, but once again, a computer can only
be as good as the software that is written for it...

>TT. I'm mainly into programming, and want to develop ATARI software. I think
>the best machine would be the TT. It has good speed/graphics boards
>upgradibility, the power needed.

You're 100% correct. My TT with NOVA card leaves the Falcon for dead
in every area except for DSP/sound applications.

>Although I'd like to make programs only for the TT and its graphics
>card, making these programs compete with the ones on say MAC and IBM
>platforms.

This really isn't necessary. Programs can be written to follow the GEM
standard, and hence work on any machine. And if you have a graphics card,
you don't really have a lot of choice: there's not much point writing
a program that only a tiny fraction of users can benefit from.

Take GEM NetHack for example. It is written using GEM and VDI calls, and
so will run on any machine. Sure, it doesn't really work usefully on an
ST [this may change someday], because the screenarea is just too small.
However, it works in any other resolution, the more the better. In TTmedium,
you see half the map at once. On a CyReL sunrise card and a 20" monitor,
you could see the whole map at once, and have a few desk accessories open
at the same time!

So by all means, program to take advantage of your current machine, but
remember that there are always Even Better machines out there.

The same actually applies when you consider different makes of computer.
If you program well, you can move your program fairly easily to a new
computer system if the need ever arises.

Geneva is really nice, and I have to agree with you on the crashproof.

Geneva is the only viable multitasking environment for non 030 machines,
MTOS may be more comprehensive in some ways, but I have both MTOS and
Geneva on my TT030 and I still like Geneva better for the ease of use.

From: Lexicor@world.std.com
Message-ID: <CKBzD6.141@world.std.com>
Source record: 194001

Well...if you're going to ask :)

I got a copy of Atariworks with my Falcon, and must admit, other than the fact that it is a little buggy still, and it lacks some useful functions it is useable, has SPEEDO Support and is a regular Word Processor. The whole concept looked like a copy of Works for Windows or something like that, Spreadsheet, Databse, Work-all format and Word Processor.

It is also painstakingly slow, especially when handling and editing large word files eg. if I make a global change then a 30 page text could take me about 1 to 2 minutes or longer (depending on what and how I change it of course), and that sometimes KILLS ME, on a TT too.

I dislike the printer handling, I still can't figure out how to print a database file the way I want it, the graphics display (displayed in a box) is downright disturbing as I cannot judge anything if I put in a graphic, but other than that I can live with it ;), truth was I only grew attached to it because when MultiTOS first came out, it was the only WP that would properly work withou crashing at the given time (not that I like Mtos too much).

Much has changed since, and I am still an avid Script 3.0 User (upgraded). It's only in German though, but it's fast, a dream, oh just wonderful! It doesn't support Speedo though only Signum! Fonts...and these are NOT a standard in the US but popoular in Germany.

What I suggest is use maybe a text editor for text writing and then import into pagestream or so (at least it has proper .ps output, Calligrapher too I heard?), i think pagestream very comfortable to use as a DTP system, great for Layout work etc.

Cheers

Yat

Your column started quite admirably, saying what a waste of time that
benchmark programs are. Then, as you quoted above, GemBench does exactly
what you criticise the others for.

Such benchmarks can always be used to mislead people (See Systems Solutions
misuse of your own program in their T28/T36 ads, for example; they do not
compare 8MHz with 28/36MHz, but compare 8 w/o NVDI to 28/36 with).

STOSFX11 can only fix the problems with STOS itself. On programs which use certain extensions, there are still problems because the extensions use illegal routines.

On my TOS 2.06 machine, BASICMJH gets STOS running but I get no response from the joystick ports, which makes it a bit difficult to test the games before compiling them.

I'd like to use STOS on the Mega STE, since it has 4Mb and a hard drive compared to the 1Mb single-floppy system which I have to use for STOS (STOS and Spectrum 512 are the only reasons I still have that machine!)

1984. Frontier (Elite II) on ST

Newsgroup: comp.sys.atari.st
Date: 1994-01-28 13:00:08 UTC
From: cabp09@ccsun.strath.ac.uk
Message-ID: <2ib28o$9e8@loch2.cc.strath.ac.uk>
Source record: 194018

I have just bought Frontier for the ST, and I was wondering if there was any mailing list or something for comments and hints. I have discovered (to my dismay) that I can't actually destroy any pirates, as the laser shots have to be very accurate. In the days of Elite, there were several `tactics' you could use to ensure a quick kill, and it seems obvious that there are some (different) tactics for Frontier.

Any ideas ?

Dave.

Not sure if this will help but... I don't know whether the CVG format is
publically available but I know that I've had no problems what so ever when
using CVGs created by Da's Vektor in my Calamus documents... I think that hints
that it's PageStream's fault...

1988. STE analog joystick ports as sound samplers?

Newsgroup: comp.sys.atari.st
Date: 1994-01-28 14:59:28 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <LANCER.94Jan28095928@wpi.WPI.EDU>
Source record: 194037
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

This may sound like a wacky idea to some...

I was thinking this morning that it's too bad the STE doesn't have audio sampling built in... Then I got thinking about ADCs and something snapped! It DOES have a pair of ADCs! In the never-used analog controller ports! Could these somehow be rigged up for audio sampling? I wonder...

They're probably pretty cheap/cheesy ADCs, but they'd probably work...

Can anyone with more programming/hardware knowledge than I enlighten me on this matter?

danke!

>page appears. After exiting more you then get all the 'missed' spaces echoed.
>I suppose this is a generic problem when running any TOS/TTP program in
>Gemini's console window.
>Has anybody else noticed this

Oh yes!

The reason for this behaviour may be that programs that are started
in the Console window don't become extra processes, but the run under
the process id of Gemini. (Even Mupfel in the Console is no extra process).

But, the programs you run in the Mupfel window are TOS-Programs with
receive their keyboard inputs from Gemdos- or Bios calls. Gemini itself
(including the Console windos) is a GEM Program that uses AES Calls for
Keyboard handling. It looks like this both methodes within the same
process conflict under MultiTOS.

? Any explanation and/or fixes or workarounds known

The only fix with is know to me is: Don't use the Console Window under
MultiTOS.

The Mupfel Shell is also a standalone program (MUPFEL.TTP) which is
startable in TOSWIN or MINIWIN. Then, Mupfel is a TOS process and
the problems with running TOS programs disappear.

By the way, if the Mupfel shell runs under TOSWIN/MINIWIN, your mouse
arrow won't disappear while more-ing a file or anything like it does
in the Console.

This method has also a few disadvantages, e.g. the cd $TOPWIND command
whith is defaulted to function key F1 by profile.mup won't work anymore
because Gemini and TOSWIN/Mupfel have different environment variables.
But this things don't mind very much.

Bye, Harald

Calligrapher is an excellent program. I use it to write my articles. One
point to remember is that it is very slow, I wouldn't use it on an 8MHz
machine myself.

I don't see what you mean. All I wanted to tell people is that benchmarking is useful, but the results should be read with caution. Are you suggesting that there is no need for benchmarking at all? I didn't imply that benchmarking was useless, at least I didn't mean to. I just wanted to let readers know that it shouldn't be taken too seriously.

I wrote GEMBench for my private use, but gave copies of the early versions to friends, and before I knew it, everyone was using it. I think that as far as benchmarks go it's quite good. If you have any relevant criticism, I would be glad to hear it. Many suggestions from users have been incorporated along the way.

>
>What is the status of the Falcon these days?

Still alive and still shipping, although certainly not in the numbers that we or Atari would prefer. Atari has admittedly concentrated most of their development dollars and efforts on the Jaguar game console.

>Is there an 040 option in the works? Is there a 486 emulator (onboard 486 >processor) available or in the works? Is there a tower case with external >keyboard available or in the works? Any word on the software based modem?

None of these are available or 'in the works' from Atari, to the best of my knowledge. I'll let others address your questions in regards to possible third party availablity of these upgrades, primarily via UK sources.

> ... if Atari doesn't get its act together soon, I may be forced to get a >486 machine. That would really be tragic.

Tragic? It would be a downright shame! :(

The Falcon still has a lot to offer, IMHO, although that edge has slipped quite a bit this last year. If you eventually decide against an Atari, might I suggest you consider one of the new Apple PowerPC's? At the risk of being branded another 'Peter Sinclair' (a wildly fanatic Apple fan who used to regularly harass this newsgroup), these new machines really are amazing and certainly worth a look after the March 14th intro date. I mean, $2000 for a system complete with monitor and keyboard which will run rings around most Pentium machines is a revelation, indeed. Now if Darek Mihocka could just develop a Gemulator board for the PPC... :)

But don't give up on Atari just yet...

>UNIX-machines at our university are not able to print them. And I do not know it is
>a error of the PS-File or the UNIX-Server.

Ghostscript is useful for debugging problems like this. It is an
interactive PostScript interpreter, so you can debug PS like you
might debug a basic program.

If GS works OK, but the PS printers still crash, you can use GS to
convert the image to another format and then print on another type
of printer.

> find Overscan is compatible with this configuration.

Just a quicky; how did you get TOS2.06 _and_ AdSpeed ST into the ST's case? I was of the opinion that the TOS2.06 expansion for the STFM required a small board to be bolted onto the CPU. I have AdSpeed ST and there is not a cat in h*ll's chance of bolting anything else onto the CPU and still have enough clearance for keyboard to fit properly. In fact I had to get the tin-snips out & cut the shielding to fit AdSpeed!

Cheers, Steve

2002. Falcon oddity

Newsgroup: comp.sys.atari.st

Hi,
I've noticed something odd when I assign keys to menu options on my Falcon. When I first boot up, the keyboard equivilants work fine. As soon as I run a program (any program), the last menu repeats the keys from the first. If I reload the newdesk.inf file, they get reset correctly, until I run another program. Also, they *never* save correctly. When I look in the .inf file, the fifth or so line has #k followed by codes for the equivilant letter for each menu entry (or 00 for none), but about halfway through the line, there is another #k, and then the full line as I saved it. The only way to fix this, it seems, is to go in with an editor and delete the first #k entry. Then, if the .inf will load correctly, but gets messed up as before. Has anyone else experienced this? Is there a patch program that will fix it? Any help would be appreciated.

Yes there is: write your own VDI screen driver.

2005. Is portable 16-bit color possible?

Newsgroup: comp.sys.atari.st
Date: 1994-01-28 18:48:07 UTC
From: timg@ccwf.cc.utexas.edu
Message-ID: <2ibml7$ac2@geraldo.cc.utexas.edu>
Source record: 194039
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

As some of you are aware, I am having some trouble getting Ghostscript to properly display 16-bit color on some graphics hardware. I seem to be quite misinformed. Some authoritative answers to the following questions would be helpful:

1.) Does all 16-bit graphics hardware represent a pixel as a single word (i.e. 16 consecutive bits) of rgb information (rrrrrgggggbbbbb) and use no lookup table. It seems that the 32K mode of the Crazy Dots board does something different, but WHAT? Does it use some interleaved format? The Crazy Dots vdi reports that there is a lookup table in this mode. Is there some way to find out from the vdi what format is used?

2.) Does vr_trnfm() work properly on the Falcon in 16-bit mode. I have heard rumors that it does not.

My third question requires a little background. Ghostscript creates a bitmap in memory, which I must then transform to the proper format and display on the screen. GS asks the screen driver code to tell it what bit sequence to use for a given color, so I cannot draw directly to the screen with the vdi. I have to somehow find out (using portable GEM calls) what bit sequence corresponds to what color.

3.) Is there a problem (an any hardware) with the following procedure to find which bit sequence corresponds to which color?

a.) Use vs_color() to set one pen (say pen 1) to the desired color.
b.) Use the vdi to draw one pixel to the upper left corner of the screen.
c.) Copy the first 16 bits of screen memory to find the bit sequence which corresponds to the desired color.
d.) Tell Ghostscript to use this word to represent a pixel of this color.

Clearly this won't work if an interleaved format is used, but how do I find out (with function calls) whether the bits for one pixel are interleaved or consecutive in memory?

I know I have been asking questions similar to these for a long time, but I still don't seem to have enough correct information to get working 16-bit color on all hardware.

Thanks for any help.

Hi,

My ST has a heat-related problem that causes the machine to hang when accessing the hard disk for just about anything nontrivial. Does anyone have any suggestions for pinpointing the problem (dma chip, ICD card, drive itself)? I know it is a heat problem, because it goes away if I open the case (it is in an IBM PC case with the usual fan in the power supply) and blow on the board and drive with a big room fan.

>>>>>>> Sequence of events during failure: <<<<<<<

Machine accesses hard disk,
Disk access light comes on,
Dialog stating "data on disk may be corrupted ..." appears (sometimes bombs instead). The ICD board reports no sense errors or other errors of any kind. The data is really fine, since everything works fine with the big fan.
Disk access light remains on, even if the dma cable to ICD card is unplugged or power to icd board is removed,
Machine must be rebooted, first reboot always fails -- won't reboot from hard disk,
Further attempts to reboot may fail depending on whether the drive hangs during the boot.
The floppy drives seem to be unaffected -- they still work OK.

>>>>>>> Failed attempts to fix the problem: <<<<<<<

Reseat chip ritual -- reseated ROMS, DMA, MFP, floppy controller, and MMU. Tried this may times.
Reseated SCSI, dma cable, and memory board connections.
Felt all chips to see if any seemed abnormally warm. All seem quite cool.

>>>>>>> Hardware information <<<<<<<

I have an old 520stf (TOS 1.0), from around 1984 I guess. It has 4M of ram on an Aerco board, an ICD SCSI board (85M Quantum drive), and a midi port modification (slowed the baud rate) which allows the use of a DEC keyboard.

Any suggestions for how to pinpoint the problem? Can I take the drive to a local PC store to be tested? Can I eliminate the ICD card as the source of the trouble? Is it time to get a Unix box? Any help would be appreciated.

Thanks,

-Tim Gallivan

: Result: The Dhrystone benchmarks aren't Cache-friendly (they don't seem to
: fit in the F030-Caches). As the F030 only has a 16 bit data-path to the
: memory, the results of the benchmarks turn out bad.

What's this about a 16 bit data path? The manual clearly gives the data bus
width as 32 bits and recent Net arcticles on memory upgrading have stated that
four 8/9bit SIMMs are needed in parallel to provide the required data width.
Anyway, if the Dhrystone benchmarks are oriented towards memory access speed
a 20MHz machine is likely to be faster than a 16MHz. (Of course, accessing
screen memory over the expansion bus on the 386 would be slower, and a 386
can't decompress JPEGs quickly like my Falcon can with its DSP etc. etc.)

2013. Mod program for megaST

Newsgroup: comp.sys.atari.st

Source record: 193927

I have been searching for awhile for a mod program for my Mega2ST. I have been suffering through non-working petra's for paula, and finally to the coup de grace audio12...

I have gotten the file off the archive, which first has to be unlzh'ed then unmsa'd. This last step with MSA has been a nightmare. Any disk created from the file crashes, I believe it is because my archiver tries to format the disk 82 tracks with 9 sectors for a file about 755 K. I have tried everything, from turning off the auto-format and using disks formatted beyond the 755 K, to heavy coaxing and pleading.

Since I can't use this program (audio_12), though highly recommended, are there any others of note that don't have to use MSA? I hate using MSA, I think it is the most horrible compression utility (I have dubbed it a Futility) I have ever come across.

Also, what is the current version of MSA, I am using the 1.xx 1990 version. This may be the root of my problems.

|> Falcon030 1500 - 2500 dhrystones/sec
```

Strange. My ST with a 25 MHz 68030 board has roughly 4300 d/sec when compiled for 32 bit ints. I've used gcc 1.37, gcc 1.40, and gcc 2.3.3 pl 1. I can reach over 5000 d/sec with -mshort. The Falcon should have roughly the same speed since its slower CPU is compensated by its faster memory bandwidth. Are You sure not to have forgotten to optimise (although You said You did)?

You have either edited your NEWDESK.INF file or exceeded the 4096 byte
limit. Your best bet is to delete it and start again.
SHBUF and WINX will solve this problem.

Well an alternative is to allow the redistribution of a scrambled binary
which makes use of one of the distribution (i.e. the one they sell) disk
files to unscramble itself. In other words if you haven't got MultiTOS
you can't unscramble the later versions.
Steve.
PS I'm always open to offers if someone wants me to write such a thing :-)
(or anything else for that matter).

I have the 'BiTZ' TOS 2.06 upgrade, which makes use of the unoccupied
ROM sockets in my machine, while retaining the original TOS 1.02 ROMS
in two of the six sockets available. This allows switching between
the two TOS versions by means of either a hardware or a software switch,
and in addition to the ROMS the upgrade includes a TOS Decoder chip, on
which the pins are flattened out and soldered directly to the CPU
(AdSpeed ST) on the underside of the mother board, so that no additional
space on the upper side of the board is required.
I too found space very tight when installing AdSpeed and, like Steve,
had to cut away part of the shielding - that shielding is really tough :-)

I use ProtrackerST on my Mega2, with excellent results. Be sure to check it
out (pt20s.lzh on atari.archive.umich.edu). It is the best tracker for the ST
that I have located. It comes with versions for the ST, STe, and TT.

Perhaps your floppy disk cannot handle more than 80 tracks. You can check
this with DC Maxtracks (available from atari.archive.umich.edu).

> Since I can't use this program (audio_12), though highly recommended, are there
> any others of note that don't have to use MSA? I hate using MSA, I think it is

Well, I've never heard of this program, but I am a mod file fanatic and will
have to check it out. If I can get it to unmsa, I can attempt to put it
in a format that you should be able to handle. Email me in a couple of days.

> Also, what is the current version of MSA, I am using the 1.xx 1990 version.
> This may be the root of my problems.

You want to get msa_2_3+.prg from atari.archive. It is installable as an
application, and is much nicer than the original MSA programs.

Hope this helps.

Hello Greg,

There are a minimum of four pieces in any Atari ST hard disk system (not
counting the Falcon030). These are:
1. Host Adapter
2. SCSI Hard Disk Drive
3. Case
4. Power supply.

The host adapter is what you're calling the controller; I think yours is
a Supra(?). As you've noticed, Supra used a nonstandard 25 pin SCSI connection
on some of their host adapters. The common 50 Pin connector has every signal
pin intereaved with a ground pin to minimize noise interference in the wide
ribbon cable. Later Supra adapters had both the 25 pin and the 50 pin
connections.

A host adapter is what allows you to plug a SCSI device into a non-SCSI host computer; in this case, through the Atari DMA connector. Although you can still use the Supra if you choose your SCSI drive carefully and cable it properly, you're limited in your choices of drives to connect. Check your formatting software, SUPFMT.PRG, and see what drives it lists. If you choose a newer SCSI drive it may not work, since you may not be able to format it (or even *find* it) with the Supra formatting software.

A single host adapter should be able to connect up to eight SCSI hard disks to your Atari. Once you have a 50 pin SCSI ribbon cable, you can put several connectors on it and chain multiple drives (I have four right now). However, each drive needs to have a unique ID set, via jumpers, so that the computer can tell them apart. For each unique ID you can also have multiple Logical Unit Numbers (or LUNs), but this is not significant unless you're using an unusual controller. You just need to check the IDs of each drive and make sure they're different.

There's usually three jumpers somewhere on the drive's circuit-board, labeled A2 A1 A0, with a jumper or two on the pins above them. These jumpers can be read as binary "1", so that, for instance, if the first two are empty and the third (A0) has a jumper, the ID is 001. If you have only one hard disk, most likely all three sets of pins are un-jumpered, giving you SCSI ID 0. If so, when you add more drives, make sure their IDs are higher numbers.

If you have the money, I'd recommend that you get a newer host adapter, such as ICD's "The Link". This adapter should work with any current SCSI or SCSI-II drive, or even a CD ROM drive. The software is up to date, and will let you format nearly any popular unit.

Another consideration, when you expand your system, is what the power supply can handle. If you can read the output current in Amperes for your supply, you can calculate its capacity using volts * current = watts. Add the draw of the present drive plus the one you want to use, and see if it's below the limit.

Hope this information helps your efforts. Best of luck!

Two things:

1. I forgot to mention that pt20s.lzh does not contain an MSA file :-).
2. I cannot seem to find audio_12 anywhere. Email me and let's figure out
a way to get me the file, if you don't mind.

2025. 14400 baud modems

Newsgroup: comp.sys.atari.st
Date: 1994-01-29 03:15:18 UTC
From: Joseph_Hogan@UQAC.UQuebec.CA
Message-ID: <9401290316.AA29870@infocom>
Source record: 194048

Hello,

I have received some helpful mail on different modems, and I want to
thank those who have sent mail to me. I have a couple more
questions to ask:

While looking at adds, and various write ups on
the performance of modems, I have been seeing the different modems
having different qualities. For example, .32, .42, .42bis, mnp1-5
and I have seen the different fax qualities class 1,2 and 3.
Could anyone explain them to me. I know that the .32, .42, etc are types
of compression or error detection, or something like that, and the
different class of faxes, are just different types. I was hoping
some one could explain to me, in a basic way, the differences.

That about says it.

Thanks again in advance,

Joseph Hogan

ps. who would I talk to to find out which modems work for the
faxing software available in the USA? Thanks:)

2026. Re: 14400 baud modems

Newsgroup: comp.sys.atari.st
Date: 1994-01-29 04:06:53 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <LANCER.94Jan28230653@wpi.WPI.EDU>
Source record: 193916

Quick guide to modem terminology:

MNP 2-4 == error correction protocols
MNP 5 == compression protocol (2:1 at best)
v.32 == 9600 bps
v.32bis == 14,400 bps
v.42 == error correction protocol
v.42bis == compression protocol (4:1 at best)

You want one which can do ALL of these things! No kidding! v.42 is compatible with MNP2-4, so you don't have to look for that... Also, v.42bis doesn't work without v.42 so it may not mention that... It'll say something like "v.32bis, v.42bis with MNP!" or some such...

You can get any IBM compatible external modem. I would reccomment the Supra v.32bis or the US Robotics Sportster. They are readily available at most major electronics and home/office stores. They'll be in the $150-$180 range.

As for fax, you need a ZyXel modem to use HackFax, the only PD fax program I know of... (You'll also have to read German!)

Both of those modems are compatible with Toad Computers' excellent Straight FAX 2.0 software. Toad also offers good deals on the Supra modem...

For a modem program... PD suggestions: UniTerm, STorm, Kermit

Also, your ST will probably need (or LIKE) a serial port patch program. Look for HSMODA02 or SERIALFIX20 and put it in your auto folder. I use HSMODA02 right now, but STorm seems to like SF20...

When you GET your modem, set your terminal to 19200, RTS/CTS and have fun!

Toad Computers sell STraight FAX which is quite good and can run as a desk
acc. They should be able to tell you which modems it supports.

Paul,

Like a few of the others have already mentioned, yes there is a termina
program that will give you 80 columns & 16 colors (or colours if you prefer)..
.. and it is ANSITerm. The latest shareware release version is v1.90. I
think the version posted on archive.umich.edu (or mirrors of same) are v1.50.
Quite a bit of changes and bug fixes have happened since v1.50. I'm a
registered owner of v1.91 and it has a few features not included in the
publically available shareware release, including autologin macros, faster
screen scrolling for highspeed modems, and a few bug fixes. ANSITerm is
-THE BEST- bar none, 16-color ANSI program and it'll run on the lowly ST, ie
not TT or Falcon needed for those extra colors. Basically, ANSITerm switches
to low resolution but uses a custom font for full 80-columns. It is is a
tenny, tiny bit harder to read, but it is very readable. I actually like
the font provided with it... and since it comes with a font editor, some
folks have made up alternative fonts. So far as supporting ANSI goes,it
does it all including blink, bold, etc. I've tried just about every terminal
program included CoNnect, STalker, STorm, etc... but for ANSI work, ANSITerm
is the best... and it is in fact that fastest for those with highspeed modems
and I should know.

this is the big question. I've seen different Frontier versions on other systems (I've played PC Frontier Version 1.00) but I don't know if there are other frontier versions for the ST. Quick question to all Frontier players out there:

Is there anybody playing Frontier who doesn't have that "include headings" message within the copyright question? If your version does not mention this, check if you can gain money by trying to sell your ship with a passenger inside.

Or just use strings.ttp (with options -a -A) or frontier.prg and look for version. My frontier.prg says something like release 4, version 1.05

About three or four years ago, Atari declared distribution of all RAM-based TOS versions illegal, including beta and 1.00 versions.

So, there is no legally available RAM-based TOS version. Except MultiTOS, but this one isn't for free either.

Old non-Speedo-aware applications are not aware of the scalability of fonts.
They just see the fixed point sizes you assigned in OUTLINE.APP.
To have more font sizes in old applications, just assign them using
OUTLINE.APP. You can do so globally for all fonts, or fontwise.

You get Andes Attack when you register either Llamatron or RotMC - can't
remember, just look at the title screen.

>
>Richard.

The missing link is the premier extension for Stos by Top Notch software , the writers of the misty extension . It adds about 50 new commands the most important of which are replacement sprite commands of the form
bob SCREEN,ADDRESS OF BOB GRAPHICS,IMAGE NUMBER,X,Y

All graphics are preshifted which results in huge files but also huge speed increase , about 2-3 times quicker than Stos sprites . You can lot the bob's in bulk and also plot 1 bitplane versions called joes <sick>.You can get it from atari archive I think its under link1.lzh link2.lzh etc.Well worth a look.

>and Spectrum 512 are the only reason....

Older version of BASICMJH are BUGGED , there is a newer version which
allows Stos to run PERFECTLY on Mega STEs and TT but unfortunately it
isn't Pd.You can get it from Goodman International.

On the other hand there is a brand new stos fix program called stsfx27a.lzh
from a different author which you can download from atari archive , its
in either the langauges or Programming directories . This claims to patch Stos
and its compiled programs to run on every atari including mega ste , TT and all
Falcon toses.Try it out...

>ps. who would I talk to to find out which modems work for the
>faxing software available in the USA? Thanks:)

According to the STraight Fax manual (STFax being an American programme), it's compatable with: Supra Fax modems; Zoom Telephonics (FX9624 Class 2); Smart One Class 2 - Best Data Products; Practical Peripherals (2400 FX96SA Class 2; GVC Technologies (Fax Modem 9696 Class 2) and ZyXEL (U-1496 Fax Modem. Class 2).

STraight Fax is available from Toad Computers (see earlier messages).

The possible advantage of using a Supra Modem is that it supports "Silent Answer" so that you can use one line for a phone and fax modem to receive faxes automatically.

AFAIK there are only three fax programs for the Atari - the above, TeleOffice (a German programme but available in English - it's very good for sending faxes but I had a lot of problems with receiving them) and another German programme - this time shareware - called Communications Manager. This last, used with a ZyXel modem also supposedly supports digital messages! I'm trying to get a copy from Germany at the moment, so if you are intereseted, email me.

That would do for ST-HIGH. Try not just flipping the lowest bit, but
exchange the color values for the two colors (either 0/1 or 0/255, can't
remember), maybe this one helps. I remember having heard the term
`duochrome' instead of `monochrome', so I think there's a software
solution like this.

If you continue to dislike the white screen, give me the monitor! :-)

this is an easy one to solve, you are trying to install too many
applications, icons, or whatever and are overflowing the cache for the
NEWDWESK.INF file.

the best way around this is to install ROMSPEED.PRG in the auto folder
and use SH_BUFxx.PRG to extend the size of your cache. I have a lot of
installed appications and have my cache set to 16k!

Well, you've installed it right, AFAIK, but you can't make C library
calls from a trap handler! I'm _pretty_ sure you can make other TRAP
calls, but I don't take my word for it... who knows what would happen if
you called another TRAP that called your TRAP handler, which called that
TRAP, which called your TRAP handler, etc, etc... (probably a whole line
of bombs.. ;-))

Last I heard, the Amiga version would come up and idle, and that's about
all it would do... I doubt the TT version would be anywhere near 3
weeks behind, due to the fact that you'd have to completely re-write
most of the device drivers (like keyboard, and screen output and disk
i/o, etc).

> (I hope they mean 030/PMMU with "TT", I want it on my Falcon!)

I doubt they do... the Falcon does lots of things very differently than
the TT (like having an IDE drive for example!).

And I _think_ you'd be _really_ disappointed with the performance of
even a tiny UNIX like Linux on such a slow machine, especially if you
used X (assuming a port of XFree86 was developed as well). The X server
on my OS/2 box at work ('386/33 w/8M of RAM) is barely acceptable, and
that's only because I don't have access to a faster machine (ie, I have
no choice).

I have to run it now and then thanks to the brain-dead GFA-BASIC uucico
in the UUCP software that I use. I haven't been able to beg a complete
MiNT uucp setup out of nox yet... ;-)

> And am I suspecting rightly that most of those opposing a TT group don't
> have one?

I oppose it because I don't want someone to go through the proposal, the
RFD and then the CFVs just to find out that they don't have enough votes
to put the new groups through. A lot of work for a lot of embarassment.
And it seems rather pointless... the comp.sys.atari.st and
comp.sys.atari.st.tech newsgroups aren't exactly swamped with TT and
Falcon messages. Lots of work for someone to go through just so you can
feel a bit better about your machine.

If you're looking for a 14400bps FaxModem you might want to try the LineLink 144e from MicroWarehouse (although it's really a Prometheus using a Sierra chipset). It has the standard array of features:
- 14400 bps transmission
- V.42bis (plus MNP2-5, plus all of the other standard V.s) for 57.6kpbs potential throughput.
- 14400 Fax Send and Receive (you don't need to buy the software from them to use it--it works great with STraight Fax)--Class II.
- Voice mail support (although I don't know of ST software that supports it).

It isn't a great modem, but it works fine for me, and I'm connecting to my schools screwy modem pool (which doesn't support RTS/CTS!). PLUS, you can have it shipped next day for $106--not bad.

It's available from MicroWarehouse (MacWarehouse if you want it with a Mac Cable and Mac Comm software)...

From: boyd@gauss.math.fsu.edu
Message-ID: <2iemuu$qoc@mailer.fsu.edu>
Source record: 193989

selick@acs.bu.edu wrote:

> Is there a floptical drive available for the Atari STe line of computers?

Yes.

> I've already got a Supra SCSI host adaptor.

Unfortunately, I don't think it will work with the Supra software. I know
it will work with an ICD Link host adaptor and ICD software. It is possible
that you would only need to get the software (the Pro level ICD stuff).

> Is the floptical format compatible with
> SCSI? Can the Atari read/write/format the flopticals OK?

With ICD stuff, yes. Toad computers sells turn-key floptical drives for the
ST. Give them a call and ask what you need (1-800-448-TOAD).

> Will they work for
> hard drive backup with Diamond Back 2.42? 3.0?

This I don't know, though I suspect that the answer is "yes" (since the
flopticals are mounted just like hard drive partitions, to my knowledge).
Toad should know.

Hope this helps.

2064. Re: Making GIFS

Newsgroup: comp.sys.atari.st
Date: 1994-01-29 22:27:53 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <2ient9$cvv@golem.wcc.govt.nz>
Source record: 193945

] If you want to convert neo/degas pics to gifs just use ViewGif at
] atari@atari.archive.umich.edu

Doing this isn't a lot of use on an ST however. There is a conversion utility that will convert SPC to GIF, and several that go GIF to SPC (The best probably being Photochrome).

16-color GIF's, yecch! :)

Well, certainly everybody who has a bitstream font editor (very rare!) can
produce his own fonts and can define them as PD. But the 'real' fonts from
bitstream (swiss, dutch, future, times, garamond....) are not pd.

Message-ID: <19940129.20303093.etat@delphi.com>
Source record: 193958

I just picked up a USR Sportster 14.4 faxmodem...does anyone have the proper NVRAM settings? I am using Serial fix 2x and do alright with PC BBS.s but the speed really drops when I logon an Atari ST BBS...surely someone out there owns one of thes things too...any input would be appreciated.

2070. Kennedy Approach--strange bug?

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 02:01:24 UTC
From: ua887@freenet.Victoria.BC.CA
Message-ID: <CKF6yD.HDG@suncad.camosun.bc.ca>
Source record: 193962

Yes, I just picked up that ancient game today, and the strangest thing happens (well, not THAT strange, but you get the idea)...

The speech synthesis doesn't run at all on my system (it ran fine on the systme I tried it on)...mine is a 520ST (ext. drive), TOS1.0, and 2.5Megs. This isn't really a serious problem, but if anyone has encountered this in the past, and knows why it does what it does, please e-mail me, I am tres curious!

2071. Yow! 1110 cps at 9600 bps?!?

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 03:38:30 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <2ifa3m$7kn@bigboote.WPI.EDU>
Source record: 193969
Cross-posted to: wpi.ccc,comp.sys.atari.st

Any ideas how this could be happening? I just downloaded a ZIPped file with zmodem over a 9600bps MNP reliable (though not MNP 5 compressed) connection and got 1110 cps! My calculator tells me that the maximum possible transfer rate at 9600 with 8 databits and one stop bit should be 1067cps. 1110 is 105% efficiency!

Does this have something to do with the MNP4 (well, v.42 really) reliable connection? Does that strip out the stop bit from the modem to modem data stream? That would give me the more realistic 96% efficiency...

No matter... 1110 cps is a whole lot better than the 230 I always got with my 2400 baud modem!

Cheers to high speed modems!

.s.
(I just wish I could get a 14.4 connection here!)

From: selick@acs.bu.edu
Message-ID: <2iff3i$hc6@news.bu.edu>
Source record: 193972

I'm thinking about getting a CD-ROM drive for my 1040STe and was wondering which drives are known to work with a Supra SCSI host adaptor, and how much it should cost for just a scsi drive without any PC interface garbage, etc. Also, what could a CD-ROM be used for on the Atari other than the new disk specifically for Atari? I mean, maybe clipart, or fonts, but would an encyclopedia cd be easily read on the Atari? How much would it cost to have a cd made of my hard drive so I could boot up on the CD and have my hard drive be at the end of the chain somewhere? Would this increase my drive speed? Will it necessarily be compatible with the Falcon 486 emulators that are hopefully being worked on now? How abouut Spectre?

There are 8 data bits, one stop bit, and one start bit = 10 bits. At
9,600bps, that is 960 cps max.

>Does this have something to do with the MNP4 (well, v.42 really)
>reliable connection? Does that strip out the stop bit from the modem
>to modem data stream? That would give me the more realistic 96%

According to my modem operating manual, MNP5 and v.42bis are both
compression protocols -- v.42bis has a theoretical capability of 4:1
compression and MNP5 2:1. In addition v.42bis can detect pre-compressed
files and shut itself off. Therefore many modems try to negotiate
v.42bis first as the preferred protocol.

This compression stuff assumes, of course, that you have a 19,200baud
serial connection to your 'puter from the modem.

In my valiant attempt to build a gcc cross compiler on the DEC alpha axp 4000/384 MB here at school, I don't know if I've done anything right yet, but so far:

I got all the sources.

Got cgcc/gcc-cc1/gcc-cpp to compile with no errors.

got gcc-as to compile with no errors.

obtained the libraries in binary.

However, nothing in utlsrc37.zoo compiles for me, and when I run cgcc, I get
cgcc: Internal compiler error: program as got fatal signal 6

What do I need to do to get utlsrc37.zoo to compile? All it says is warning: redefining 'free' and then exits some time later but gives no explanation.

and what is the problem with cgcc?? Do I need to give it a command line option to look in my gcc-cross directory instead of the default dir?

thanks very much for your help.

david

I was afraid that would be the answer... But, I suppose I can patch my copy of
NVDI and let it go.

It seems, from various TT docs, that there is no palette change that will
invert the TT-hi video, the inverters are only present for the lower rez's.
Oh well.

There are flopticals' that are SCSI (I think most if not all are) and it works with an Atari just fine, I had one back then from PMC.

Seriously though....I would NOT recommend a floptical for ANYTHING but backup and easy transfer via Postal Mail. It is slow, overheats extremely easily and I always have problems with autobooting it from an ST (i.e. I had to use a startup disk). Might have been an old model, but the speed will more than likely NOT be faster.

I recommend a Syquest...more capacity and faster, they are also getting really cheap.

Cheers

What the heck, give it a try. You've got a wide variety of options; each
port has an 8 bit X and Y (paddle) input, so you could easily have 4 8-bit
inputs. Port 0 also has a light-pen input, which gives 10-bit values for X
and Y, which you could try to use for higher resolution. But, I've never
seen any docs describing how fast these ports can be sampled, or what voltage
levels they expect... The button inputs seem to be 5 volt TTL level, dunno
about the analogs...

There is also 3 otheres that I can think of but all German,
Script III, Signum III and Tempus Word..

Its posible that there is a English version of Signum III, but its a shame
as these are all excellent Word Processors or Document Processors..

There is a working demo of Script III, and I do have a demo
of Tempus Word, there could even be a demo of Signum III..

I do wish some one would convert all of these as I think these are the best you
can get..!!!!

They leave all others for dead....

I would not recommend the LINK at all, as its not intended for this
type of contruction, its intended for Mac/PC type external hard drive boxes
with 50 way connectors on them, its a external host adapter not a internal one.

> Scott R. Chilcote
> scotty@verdix.com - or -
> scotty%verdix.com@uunet.uu.net

All you need to do is to remove the hard drive in the box and fit a Quatum
LPS type drive, but you will have to get ICD's Pro software to make this drive
work, Supra does not support these drives..

Note: the 25 way 'D' type connector is wired the same way as Mac type drives
use, so a Mac type hard drive can connect to this 25 way connector...

Neither, I'd say. Why part with cash for immature compilers (Pure-C's assembler is one pass and the linker can't resolve forward references; Lattice will not compile modules >32K) when GNU-C is for free and produces superior code? The latter's optimizer is a pleasure to see at work, and lot's of the resulting assembler code I couldn't have done more efficient manually.

Unfortunately I spent money on both of the above mentioned C compilers, which is what some would describe as paying for one's education...

Uhhh ... one _must not_ use the STe/Falcon-analog-ports for sound-sampling
or anything else like this !!! The analog-inputs are the same than in every
old home-computer (VC-20, C-64, Atari 400/800/600XL/800XL ...) !!

That means you can only connect a paddle or a variable resistor of 500kOhm
This resistor is used to unload an internal condensator ! During the
unloading a 8-bit-counter is running, so you get a value between
0 and 255 - thats all.

You see - there are _no_ "real" ADCs in the STe ! For sound-sampling, the
Falcon has audio inputs wich are connected to "real" ADCs.

BTW: The light-pen-input is a _digital_ input. It does not produce
x/y-values ... only the video-chip writes its current row/coloumn
into the light-pen-registers, if this input becomes low (0V).

I recommend to use "real" ADCs like AD-7569 from Analog Devices. This chip
produces up to 100000 8-bit-samples per second and is very cheap.

TOS stands for "The Operating System" - wich means the whole operating
system of Atari.

GEM stands for "Graphic Environment Manager" - this is a part of TOS
to handle the GUI (windows, dialogs etc.)

TOS is the operating system which is why it stands for The Operating System
(not Tramiel Operating System as I've seen it quoted...). GEM is the windowing
front end for TOS and was originally written by Digital Research (possibly when
they were Intergalactic Digital Research!) and stands for Graphic Enviroment
Manager.

writes:
[...]
> Thats how i got my UNIXMODE settings as well, but is there
> someone who knows the meaning of

> cu/rUx ?

From the documentation of the UNIXMODE enviroment (the complete doc is
available from ftp.tu-clausthal.de (139.174.2.10) in the file
/pub/atari/programming/docs/unixmode.lzh [5880 bytes] - access via FTP,
FSP (port 21) or Email ("mail-server@ftptu-clausthal.de")):

c -- Pretend case is significant in file names. If this flag is
present, then UNIXMODE programs will not translate the case
of file names in any way, and will assume that case is significant
to the underlying operating system.
The "c" flag should *not* be used in present versions of GEMDOS,
since these are case insensitive. It is provided so that programs
will work correctly under GEMDOS extenders or future versions of
the OS.

u -- Assume file name length is unlimited. Like the "c" option, this
should not normally be used under GEMDOS. If "u" is not present,
it is assumed that the operating system recognizes only the first
8 characters of the filename, and 3 characters of the extension
(if any). If "u" is present, then it is assumed that files may
be of any length, and may contain any number of '.' characters. If
the second assumption is false (e.g. a GEMDOS emulator running on
VAX/VMS) then the "." option must be used to translate extra
occurrences of periods.

/ -- Allow the use of '/' as well as '\' to separate the directories
in a path name. If the "/" option is given, then the name
"foo/bar" refers to the file "BAR" in the directory "FOO".
Otherwise (the default) it refers to the file "FOO/BAR" in the
current directory.

r<c> -- Provide a default root drive. If the "r" option is present, then
the search for a file whose name begins with a directory separator
(e.g. '\') and which have no explicit drive letter present will
begin on drive <c>. If the "r" option is not present, then
the search will begin on the current drive (the default). Note
that the actual drive on which the file is found may differ,
if one of the components of the file name is a symbolic link.

Example: if "rC" is set in UNIXMODE, and the current directory
is "D:\FOO\BAR", then the filename "\bin\sh" refers to the file
"C:\BIN\SH", not the file "D:\BIN\SH" as it would normally.

x -- The stat-functions recognizes executable files by looking at the
first two bytes. If these are 0x601A or "#!", the file has the
executable bit set.

Bye,
Wolfgang.

2102. Atari ST Emulator (Amiga, again)

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 15:53:06 UTC
From: titan@sys6626.bison.mb.ca
Message-ID: <8a4ygc1w165w@sys6626.bison.mb.ca>
Source record: 193867

Hi again,

Well, I was looking through the November 1993 issue of Amiga Format and lo and behold I came across the Atari ST Emulator in a PD catalog. It must be the same one I have/had (now), because it said that it requires 2 drives to run. So, I'm now assuming this emulator is PD. I would like to have this verified by giving it to another Amiga user on the net, but it would be too large to send in e-mail (atleast 160K uuencoded, and my editor only allows 250 lines each message). So, I could upload it to a local BBS and allow someone to FREQ (File REQuest) the archive, and then if the emulator turns out to be legal, you could pass it on to everybody else by sending it to an FTP site. How's that? Leave me mail if you don't mind FREQ'ing 115K packed archive in Canada. V.32bis speeds, so it won't take long at all.

Leave me mail and I'll give you the Fido address.

Titan

PS: I also wrote out some docs for the program.

2103. STE Joystick Port Problems

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 15:56:53 UTC
From: men@us.dynix.com
Message-ID: <Pine.3.05.9401300843.B71920-a100000@cpu.us.dynix.com>
Source record: 194000

I have an STE which works fine in every respect except that joystick port 1 recognizes only left, up and the button, no down or right. Down and right produce bizzare results, such as rapidly sending left, left, left pulses. What's really strange about this to me, is that I took it to be repaired, and the shop replaced the keyboard ($105 for this :(labor and parts?) After that, the joystick port worked fine for about 2 months, then it broke again, in EXACTLY the same way as before. Does anyone know what's REALLy wrong with this thing. I mean, I don't want to pay a lot of money just to have a joystick for 2 months. But I do want my joystick!

Of course, this could be just a really amazing coincidence.

I would be ever so grateful for any ideas.

Mark E. Nelson, men@us.dynix.com

>with my 2400 baud modem!
>
>Cheers to high speed modems!
[cut]

Ok... when you are working with a high speed modem, and you have a
v.42 or a MNP4 connection, you will not be using any stop bits. The
connection between your modem and the computer (the serial prot
itself) will be sending a start and a stop bit. the connection
between the modems, however, do not send the stop bits. This is
becuase MNP or v.42 handle the stop bits themselves, and therefore,
the you are only sending 8 bits instead of 9 or 10 over the phone
line. this makes your maximum thruput equal 9600 / 8, or 1200 cps.

Hope this helps.

Date: 1994-01-30 17:16:52 UTC
From: Joseph_Hogan@UQAC.UQuebec.CA
Message-ID: <9401301718.AA03082@infocom>
Source record: 193857

Hello,

I was wondering about the different classes of faxes that are available.

I have read something about class I, II, & III. What are the differences, and why would you need any of the them?

Next question.

I would like to know if STraight FAX works with a BOCA modem. I have seen them for a good price, but I have not heard anyone mention them on the net. Also, what are peoples experience with US Robotics Sportser modem and STraight Fax.

Thanks again for the help,

Joseph Hogan

2108. Snapshot Program

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 17:50:11 UTC
From: Lexicor@world.std.com
Message-ID: <CKGEvn.L5p@world.std.com>
Source record: 193858

Can anyone recommend me a really good Snapshot Program? I've been using MultiSNAP, Snapper, J-Snap, they are ok, except I have one problem with most snappers out there.

I'd like a program that can snap via a keyboard command, or time frame like MultiSNAP (except IT only goes to 640x400 max., everything else is garbled even as IMG). Now many great Snappers let you carve out what you want to Snap....that's neat...however when I am in a modal dialog they won't let me do that....of COURSE as I can't access the Snapshot program.

So! If anyone can help me out :) I'm looking for a snapshot program that is resolution independent AND can snap Modal Dialogs :) eg. via a keyboard command.

It need not support lot's a colors ;)

Cheers

Yat

2109. img -> text

Newsgroup: comp.sys.atari.st
Date: 1994-01-30 19:11:02 UTC
From: miff@apanix.apana.org.au
Message-ID: <2ih0o6$a78@olivaw.apanix.apana.org.au>
Source record: 193959

Greetings... This will serve me right not to keep the interesting snippets that go past 8(

I have a need to translate a small .img file into a 'best look' ascii representation. Thinking to take advantage of our wonderful resources, I grabbed several ports of the PBM utils (namely those from uni-paderborn, and atari.archive) and proceeded to work img ->pbm (limited success) and pbm->text (no success at all).

Needless to say, I'm not hugely impressed - does anyone have a reasonably recent version of these tools - preferably built with the Mintlibs...

The reason I kick myself, however, is that I'm sure I saw a number of tiny programs go past for just this thing - if anyone has some source to do the trick, I'd be very grateful 8)

Ta!

don't know specificly about the STE but there is one program called
Procalc, it is not very advanced but okay for everyday normal use. (and
it's either PD or Sharewre) that is quite good. Also there is a very
basic calcualtor included in Harlekin..

marshall@cs.uq.oz.au (Marshall (G.M) Harris)

>Is there any hope that Linux will eventually run on a MegaSte (Pppplease!)?

Hey, I will say it _yet_again_ : NO! IT CANNOT BE DONE!

It's hard enough trying to take that abominable mess they dare to call
a kernel, and get it to work on a motorola processor at _all_.

It is totally, utterly, impossible to make the linux kernel run on a
system that does not have the ability to execute from virtual address 0.

This means that a 68000-based system _CAN_NEVER_RUN_LINUX_

No amount of please, grovel, whatever can do it - it is a techincal
impossibility. If you want a unixlike system, and can't get MiNT to
look like you want, then look to Minix, or OS/9.

I'm sorry, I feel like I'm taking candy from a baby, but that's the way
it is. Finis. End Of Story.

I have read in the latest ST format that FALCOS is no longer being
developped, and that Atari have pulled out of negotiations
with the company.

Back in 1990, I heard rumours about STOS-PRO. This was supposed to be
STOS with no line numbers, and more structure in the programming.
This also never materialised.

AE.

DOOOOOOOONT......

The ADC isn't of the kind for audio sampling... it is only four timer chips (NE555)
wich gives specifik frequences for diffrent values over a resistor (the joypad)...

I'll guess you could make some kind of audio sampler with it, but I think it's
cheaper to buy a new ADC and use some other port on the computer....

>FTP sites.

If you are interested in the 4-player aspect of MEGALINE, rather than
the sound effects, may I reccomend that you get LINECRASH instead.
This can be played by up to eight players (four if you don't have
an STE) using both the normal, paralell, and STE joysticks.

It is available in atari.archive.umich.edu in
/atari/Games/linecras.lzh

Instructions on how to build the adaptors for the extra joysticks
are included, and also how to read them from your own programs.

However, if your ST has a TOS version greater than 1.62, you
should wait until linecras.zip has been moved to
/atari/Games, as the lzh version does not work on the newer TOSses.

Cross-posted to: comp.sys.atari.st,local.atari

that
Atari shelved it and turned its financial resources on the Jaguar. While
it may be true that the 040 is not "in the works", I think it's also true
that very little would be required at this point to get it into produc-
tion.

]> ... if Atari doesn't get its act together soon, I may be forced to get a
]>486 machine. That would really be tragic.
]
]Tragic? It would be a downright shame! :(

And likely a mistake, IMHO. But then I'm rather biased, as you're about
to see.

]The Falcon still has a lot to offer, IMHO, although that edge has slipped
]quite a bit this last year. If you eventually decide against an Atari, might
]I suggest you consider one of the new Apple PowerPC's? At the risk of being
]branded another 'Peter Sinclair' (a wildly fanatic Apple fan who used to
]regularly harass this newsgroup), these new machines really are amazing and
]certainly worth a look after the March 14th intro date. I mean, $2000 for a
]system complete with monitor and keyboard which will run rings around most
]Pentium machines is a revelation, indeed. Now if Darek Mihocka could just
]develop a Gemulator board for the PPC... :)

IMHO (again), the major forces in the desktop world can be devided into
four groups:

Mac
PC
Unix workstations
Other

Atari and Commodore fall into the "other" category and should be only of
interest to a small minority for which they have advantages. In Atari's
case, I'm in that group by virture of already having a significant in-
vestment in Atari equipment, software, and knowhow. Someone new just
getting into an Atari would fit into that minority only if they were in-
to MIDI music, getting into computers with the help of someone who was
an Atarian, getting into Ataris because of a particularly good deal, or
needing to run an Atari-specific piece of software. This really is quite
a small group, and I suspect a similar case could be made for Amigoids.

As for the other groups, a great deal of blurring is about to commence.
The Unix workstations are really RISC workstations, and we are about to
see them capable of running other operating systems with greater and

greater ease, either native or as "guest" operating systems on top of Unix. In addition, PCs are capable of running (though not necessarily well) forms of Unix, and Apple is about to spring RISC versions of the Mac upon the world. So much for nice, neat categories. In spite of that, I'm willing to make the following sweeping generalizations (I never claimed to have any sense).

If you are looking for a fairly powerful computer that is easy to use, get a Mac. If you are a power user and want the maximum performance at a penalty in ease of use, get a Unix/RISC workstation. If you are too poor (like me) to buy either of those new, patience and some effort will reward you with a decent older model of either. I do NOT recommend a PC because it offers no more "power" than an equivalent Mac with ease of use not significantly better than Unix. If you want to pick nits regarding small differences in performance or ease of use, you're missing the point.

Having said that, I DO recognize that there are valid reasons for buying PCs, such as needing to run a particular piece of software or needing compatibility with the machine on your desk at the office, but I still believe that PCs come out on the short end of the ease/power equation.

As for me, I intend to stick to the Atari world for several years yet, with the hope that I can jump directly to a RISC machine when used ones finally arrive in my price range. My Atari is doing nearly everything I have current need of doing.

From: lancer@wpi.WPI.EDU
Message-ID: <LANCER.94Jan30152742@wpi.WPI.EDU>
Source record: 193873

OK, so the STE's analog ports can't be used for audio sampling...

Now, I know that it should be pretty easy to build an audio sampling cart for the ST. I just don't know exactly how...

Does anyone have a text file or know of the location of plans for such a beast?

It would be really cool if a program like SoundLab came with plans and supported a homebuild sampler!

From: avocado@u.washington.edu
Message-ID: <2ihe7b$nvc@news.u.washington.edu>
Source record: 193869

I'm posting this for my father; replies via email would be appreciated.

In running AtariWorks on the Falcon 030, he is having problems with charts--it will not allow him to copy the chart to a document or to save it. He receives an error message saying, "GDOS cannot load the metafile driver. There may not be enough memory to load it."

He is not running MultiTOS, and has 3.2 Megs free before he loads Atari Works. He's tried deactivating some fonts and running the program only in two-color mode, all to no avail.

He only has 22K in the sound cache and 100K in the "other" cache.

Anyone have any idea what the problem might be?

-Also, could you give me the specifics (maybe even the page number) of
-where you saw the ad?

-Thanks.

Okay, I picked up the ST Magazine No 79, and on page 25 there
is an add from CYBER design.

It says it works on all Atari's after TOS 1.02, works under MTOS,
Mint,GDOS/FSMGDOS. It says something about recognizing various
graphical formats. Send and receive fax. A special protocol if both
parties are using TOSfax.

That's all the ad says.

Thanks.

Joseph

Hi Stephen,

SJ>I then emailed Steffen Engel and asked how I could get a current
SJ>version (I may not have been entirely clear. I'm offering to pay
SJ>money for disks and registration). He answered that he didn't know.
I'm sorry, the answer was for availability on any ftp-server.

I don't know if the 2.01 is on any ftp-server.

I will talk to a user with access to ftp to put it to a server.

SJ>I'd like to be able to use the tape again, and tar format would be
SJ>nice.
In Version 2.01 there is a bug with the tar-headers. The checksumm is
incorrect, so the archivers can't be read by a tar.

You have to use the Device-Driver for tar-archives until the next version
is released.

Bye, Steffen

>anymore. Why does that mean they must be willing to give away
>their property?

This argument is not valid, even if we agree to assume the
concept of "intellectual property" to be valid. It is not true
that owning property allows you to do anything you like with it.
If, for instance, you own a tenement hall, you can choose the
tenants you accept, and the rates you demand (within very wide
and reasonable limits, at least), but if you choose not to rent
the flats to anybody and not to make any use of them at all,
squatters will move into your property and the authorities may
refuse to take any action against them, ruling that the public
interest of making shelters available to people outweighs your
freedom to do what you wish with your property.
By the same token, infringing copyrights that are not used by the
owner(s), or used to prevent everyone from using the copyrighted
stuff, should be considered to be "software squatting" (rather
than "piracy"). IMHO, it would make a lot of sense if the
copyright legislation explicitly stated that copyright holders
must make their stuff available to the public if they want the
public authorities to help them enforce their copyrights.

>Or, suppose there was a serious problem with the product,
>resulting in a large potential liability. Should they allow
>themselves greater liability exposure by turning a blind eye
>to piracy?

Huh?? If you squat a program which then trashes your hard disk,
or falsely diagnoses your pet cat to be terminally ill, you still
can't hold the author(s) liable for anything. By the analogy I
outlined above, if you squat a house which is uninhabited because

it may collapse, nobody will refund you if the building collapses
and buries your hard disk and all your other possessions.

>I'm thinking about getting a CD-ROM drive for my 1040STe and was wondering
>which drives are known to work with a Supra SCSI host adaptor, and how much

Connecting a CD-ROM to an Atari based host adaptor should be no problem.
I have a NEC CDR-37 connected to an ICD one.

The big problem is the drivers. ICD sell some .XFS (MiNT based) ones which
work perfectly for some people and not at all for others.

The only ones ones are the Atari Metados drivers which apparently work some
of the time for most people, and all of the time for none ;-)

Roland.

>The writer then went on to say how wonderful GEM Bench is!

Here's an interesting point about GEM Bench:

The test for "blitting" appears to be done using a blit from RAM to the
screen. However, many (most?) of the real-world uses for blitting are
screen-to-screen.

So, while the "blitting" speed of the NOVAplus card is shown as "33%",
moving a window on the screen is practically instantaneous.

Message-ID: <quinlan.760001512@sfu.ca>
Source record: 193817

Hi, I was just wondering why you all seem to like Ataries? I have
an Atari (in my closet) an I just can't see the appeal. I have a Mac and
I consider it far superior to my atari

Some points to address:

Falcon Quadra 650 Quadra 840 AV
030-25? 040-33 040-40
Sound Chip (type?) Sony Sound Chip Sony Sound Chip
16-bit sound 16-bit sound 16-bit sound
80 khz Sampling 78 khz Sampling 78 khz Sampling
Polygon accelerator -None- -None-
DSP? -None- 66Mhz AT&T
RAM? 8Mb (Up to 64) 16Mb (Up to 128)
VRAM? 1 Mb (w/o card) 2 Mb (w/o card)
HD? 230 Mb/500Mb 230/500/1.1
SCSI-II SCSI-II SCSI-II
Future? PowerMAC PowerMAC
Multi-TOS System 7 System 7
Awsum Midi Crap Crap

We'll probably fight about the OS but hardware wise it seems that except for
the MIDI the mac hardware is far superior. I wonder why Atari beets Mac in
Europe and Mac beets Atari in N.A. (and overall). I'd like to point out that
while Premption and Protection are cool they don't really mean much to me.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Howdy!

I just purchased a used copy of Ultrascript ST-1. It came with the Times, Helvetica, Courier font disk as well.

The purpose of this message is two-fold. First, I was wondering if somebody out there might have the remaining font disks to complete the PS35 set. And if so, would they be willing to sell me those disks?

Second, and more importantly, I am looking for any hints and tips for using Ultrascript with PageStream 2.2b. I already have the PS35 screen fonts, so unless I can use the Ultrascript PS fonts (which I don't know if I can), I just need to know how to get Ultrascript and PageStream to work together to print PS documents on my Okidata OL400.

Thanks in advance,

Dom

P.S. E-mail responses would be best as they are easier to collect.

Correct. For screen to screen blitting look at the VDI scroll test
instead.
The blitting test stores the image in the computer RAM and then blits it
back to screen so you are measuring both system and VRAM access.
The VDI Scroll test uses vro_cpyfm to scroll and then draws the bottom line
using v_gtext. This test is probably more representative of a real world
situation. However, I believe that icons and images in a RSC file are
blitted to screen using RAM-to-screen method. Same applies to some progdef
that are used in modern flydials, etc.

Don't buy a VGA for your Falcon. Get at least SVGA or better yet a multisync. The basic Falcon res is too low and you'll soon want to add Blowup030 or Screenblaster and unless you have a more able monitor, you won't get much extra res. I have a Taxan 795 Multisync and get 928x700x16(can't remember exact y at the moment) at a good refresh rate.

Hi there!

Is anybody out there who knows the E-Mail adress of SSI(Strategic Simulation Inc.)?
I have some of games from SSI for my old Atari 800XL and they are really great! So I want to know if these games had ever been evaluated on the ST.

Thank you

Karsten

Whats wrong with the existing one? I haven't used the blitter on my falcon directly but the STe blitter takes any even 16bit x-increment and should be able to deal with upto 8192 bit planes! (2bytes * 8192planes = 16384x-inc).

2159. Problems with Pure C 1.1and MALLOC

Newsgroup: comp.sys.atari.st
Date: 1994-01-31 12:07:53 UTC
From: Patrice.Lacouture@aedi.insa-lyon.fr
Message-ID: <2iisap$iks@cismsun.univ-lyon1.fr>
Source record: 193874
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi everybody...

I'm trying to compile a Compiler Compiler on my Atari Mega STE 4/100 with
or without MultiTos. I tried both using PureC and Gnu GCC. With Pure C,
it compiles and links very well.
When I execute it and I try to compile a grammar, It parses and analyses the
text, then gives 2 bombs.
I traced it using Pure Debugger, and it happens that after performing (viva
Cobol ;-) about 200 mallocs (building trees) one malloc returns NULL, the
programm prints an error, continues, redirect on this pointer and hangs...
I didn't calculate the amount of memory allocated, but friends of mine
compiled it and had it running on a PC using less than 600 Kb (plain DOS).
I tried running it with 3.5 Meg available, but no avail...

=> My question:
What is the blocking factor of the malloc function provided in the PCSTDLIB.LIB
library ? Is it possible to change it ?
(I know that this programm do a LOT of SMALL mallocs (tens of bytes, or less)..
It's possible that because of the malloc blocking factor, each time I allocate
a few bytes, it allocates much more, and the program fills the memory...)

Is it a maximum number of mallocs allowed by the library routines, or a maximum
of Malloc allowed by the TOS (i.e, the Other, low level malloc) ?

Thank you for your help...

I KNEW this would come up. As far as I know the name ST stands for:
Sixteen Thirtytwo. This refers to the the 68000 data paths i.e it is 32 bit
internal and 16 bit external.

The TT stands for Thirtytwo Thirtytwo, as it has a 68030 which is 32
bit external and internal to the chip.

I'm pretty sure it's Llamatron.

When you register Revenge of the Mutant Camels, you get a souped up version
of your choice (i.e. STE version, 1 Meg version, 1 Meg STE version, TT version
and so on)
Wasn't so keen on RotMC myself, I much preferred Llamatron. Still have to
register it though. I'll probably do it in the next few weeks. Promise!

I've heard a lot about TOS 5 and faster versions multitos (are they the same thing?) in the pipeline. Why don't Atari start actively supporting their new beast? Don't they realise that in order to sell it they have to convince people that it is the best? Also, how about a modular design for future machines.

>sampling? I wonder...
>
>They're probably pretty cheap/cheesy ADCs, but they'd probably work...

Disclaimer: I don't know for sure that this is correct. However, if the STE is like every other micro with paddle inputs, then...

I don't think there are any ADCs on the paddle ports. Most paddle inputs are actually constructed out of an 8-bit counter, a latch and a capacitor.

To read the input value, the counter is initialised to zero and the capacitor charged [or discharged]. The resistor in the paddle is then used to discharge [or charge] the capacitor, while the counter runs. When the charge in the capacitor reaches some preset value, the output of the counter is latched -- this is the value that appears in the paddle register.

Paddles were originally done this way because ADCs were expensive, whereas counters and latches are cheap. With more, cheaper ADCs on the market, I wonder if that's still true.

Hope this helps,

Mat

Source record: 193686

I was looking back through some copies of St Format magazine (to find the level codes for Lemmings actually) and I saw an article about "inside the mega ste". Since I have recently acquired a used mste I started reading. One interesting point was that they claim ALL megas have 1.44 floppies, and if you use the standard system format it will give you 1.44!!! Can this be right? They also state that the manual says nothing about the 1.44 capacity of the computer. This was when the mste first came about, so this would apply to the earliest mste's. Is anyone sure of any of these 'facts'?

The registered version of Kandinsky (Drawing Prog) features a
postscript driver. I've not tested it much, but it seems to work OK.
Kandinsky can also handle .BGI fonts, which are scalable. A pretty
good selection is included in the package.

One often prepends a 0 to single digit version, instead of reading it as a decimal. Thus, 1.03 == 1.3. For an example of this, see the TOS version listings!

Of course, I'm not sure that DE does this. I did out of habit. Thus, you can read this as "upgrade to 1.3 ASAP".

Hello I am an Atari Falcon user, I have the following equipment;

Yamaha sy77
Casio ct640
Atari Falcon 4/80
misc stereo & dj equipment.

I bought cubase light at The Computer Network in Glendale;
<thier phone is 818 500 3900>, they told me it would work on my Falcon030,
so I shelled out $130.00 for it. Of course I made them demo it on a Falcon
first. I saw it work on a 14/150 falcon.
Fine I thought, I made all my midi connections at home, copied th disk
to the harddisk folder I created, and tried to run it 3 bombs, I then did the
following <btw I have Tos 4.04> configs <mixing and matching>
1> disabled all acc's
2> made sure I was in st hi-res <mono>
3> killed the auto folder <disabled it then later enabled it, still futile>
4> uninstalled magi-boot <st emulator>
5> tried running from floppy

I kept on getting 2 or 3 bombs every time the Cubase screen came up.
Bombs and bombs no matter what I did. I called TCN and they told me to make
sure I had no background programs running. I did. Nothing was running.
I also found out that The Cubase Light I had was a version 1.0. Is this bad ?

I don't know what to do, I shelled out 160.00 total on this program and midi
cables. I don't know what to do next.

Any advice anyone please help me.

Please mail me at the following addresses.

aoyake@inst-sun1.jpl.nasa.gov

I've got to jump ship from the Mac world to the IBM world, so I no longer need my Spectre GCR. I would like to sell the following as a package. If you are interested in exploring the Mac world, here is an excellent starter kit for you.

Spectre GCR (w/ Mac ROMs) and complete documentation
latest version (3.0) of Spectre software
Mac System disks (latest 6.0.x version)
"The Macintosh Bible" reference book
fair amount of PD and other Mac software

All for only $210 ppd.

I don't get it - you can use postscript fonts in pagestream itself (I know,
I've got loads. And they work fine for display & printing on anything you like.

So why does this guy want to use Ultrascript to print when he can do it direct ?

>P.S. E-mail responses would be best as they are easier to collect.

: Where and how much?

I don't know too much about Smalltalk, but I understand it is availble by
FTP from atari.archive. I think it's in the Gnustuff directory, so if
it's not the latest version, you can always compile the newest one.

>be at the end of the chain somewhere? Would this increase my drive speed?

A CD-ROM on the atari can also be used for reading photo-CD's, source from the GNU CD-ROM, source from C Users group CD-ROM, texts from many of the electronic book CD-ROMs, Audio CD's, Clip Art CD-ROMS (might need convertorprogram) Creating a CD from your harddrive will cost you about $100, but I am not sure you can boot of it, I think not. Reading from CD is faster then from floppy but a lot slower then from harddisk. Of course if your harddisk is empty after this operation, access to it will be a bit faster.

Erlend.

2185. POVRay 2.1

Date: 1994-01-31 18:54:07 UTC
From: thopman@uoguelph.ca
Message-ID: <2ijk4f$ah3@nermal.cs.uoguelph.ca>
Source record: 193812

I recently obtained for myself POVRay 2.1, and after much struggle I got it to work. I'm not very happy with it, because it won't run with my T25 turned on. Is there a reason for this? CoNNect seems to have the same problem. Especially for the raytracer, which is only doing calculations, it seems to me that it should run just fine at 25 MHz. If there's no way I can get it to work at 25 MHz, is there any way I can get it to use my math coprocessor? Or would I have to compile the sources myself for that? And, while I'm on the subject, why, out of curiousity, is the executable a .GTP file? It doesn't use a menu, so I can't multitask it under Geneva, and it's not a TOS program, so I can't multitask it under MiNT.

Jan T. did willfully write on 31 Jan 94 (to All), and I quote...
>> Why must the original authors be obliged to sell it to you?
>> [...]
JT> This argument is not valid, even if we agree to assume the
JT> concept of "intellectual property" to be valid. It is not true
JT> that owning property allows you to do anything you like with it.

That much legislation and practical enforcements of property laws vary is not really the issue here, nor that "ownership" rights may often be restricted in certain areas. The point must be that, in this case, international agreements about intellectual property do not allow people to make copies just because the item is not being sold.

JT> [...]
JT> interest of making shelters available to people outweighs your
JT> freedom to do what you wish with your property.
JT> By the same token, infringing copyrights that are not used by the
JT> owner(s), or used to prevent everyone from using the copyrighted
JT> stuff, should be considered to be "software squatting" (rather
JT> than "piracy").

I suggest reading up on just what "copyright" means. It's not something that has to be "used" by the owner in any way. It is by convention a statement of intellectual property, and which the holder may in fact do anything at all with -- withhold completely, sell, allow limited copying, or place in the public domain. I

n the stronger legal realm of patents, which are also intellectual property with a slightly different history, the only thing you can do about valid patent rights which are not "used", is to apply for a license. If in fact the patent rights are not being used, then the patent holder is obliged to give you a reasonable license to manufacture. This does not however in any way invalididate the patent ownership, nor condone "patent squatting", nor exempt you from infringement lawsuits should you copy without license.

Perhaps software should have been put in the realm of patents? This would be slightly closer to what you clearly expect, allowing licensed copying of fully published and archived, and thus always available code.

JT> IMHO, it would make a lot of sense if the
JT> copyright legislation explicitly stated that copyright holders
JT> must make their stuff available to the public if they want the
JT> public authorities to help them enforce their copyrights.

You labor under a slight misconception there: public authorities do not by themselves enforce copyright. This is a matter of private lawsuit between the

holder of the copyright, or his/her agent, and whoever is infringing. This is only one of several reasons why software companies rarely rely only on "copyright", but also include trademarks, tradenames, user license agreements, and so on, which as yet allow a stronger legal case against infringement.

Anyway, having once made "the stuff" available to the public by having it sold in the first place, surely you cannot seriously expect the copyright holder to be forced to ensure that it will always be available? There are any number of good reasons why this might not be a good thing for you, the user of software.

You seem to be looking for an active copyright regulation. This is not the way the free market functions. If there is a demand, either the original product gets made and sold, or competitors sell their versions instead.

>the maximum possible transfer rate at 9600 with 8 databits and one
>stop bit should be 1067cps. 1110 is 105% efficiency!

That's normal speed.... MNP4 uses synchronous datatransfer and
doesn't use start/stop bits from one modem to the other....

Asynchronous: 9600 / 10 (8 + start and stop bit) = 960 cps
Synchronous: 9600 / 8 = 1200 cps (see - you can get more)

On a 14400 modem you can get up to 14400 / 8 = 1800 cps

Source record: 193752

Hello world !

I've read that some of you were searching a Stacker-like prog
to increase their storage capacity ! I do own the demo-version
of Disk Optimizer a very brand new product (and still very
confidential one) which will become a full commercial product in
about 1 month. The first version will be a french one, other
will follow ! If you are interested with this demo-version feel
free to contact, I will be allowed to dispatch this demo as
soon as the commercial release reaches the stores ...
I heard it will be about 290 FF (29 pounds) but demo will be
free !! (I will of course repost this offer when time will be
elapsed.)

I'd be interessed in contacting DataLite user to compare the
two products compress ratio and time (by example AEO_0220.txt
is packed to 100324 bytes in about 15s). Your mails are
welcome to:

da-cun_e@epita.fr

P.s: To reply HWL0978@TNTECH.EDU answer with this one you don't
bother your TOS version or disk partitionning (it can even pack
floppy-disks.....)

Hello there,

I'm an MS-DOS PC user so I don't know the first thing about ATARI computers.
A friend of mine recently got an ATARI 1004 ST. He want to use it for mailing,
news, gopher and other internet related activities.

I would like advice on what communications packages to use to run his modem and
to emulate terminals. (He will be getting a unix/internet account shortly)
Also I would like to know where I can FTP these programs from or where I can
buy them. I almost forgot, do ATARI computers need special modems? (like Apple
does) Or will any external modem connecte to the serial port do? Any advice on
choice of modem also very welcome.

Thanks a lot for your time and effort. Any advice will be greatly apreciated!

Regards, Jan

PS: incidentally, my friend is also a kee GO player and plans to use the
Eagle server in Pensylvania regularly. Any sugestions on programs to
use for playing GO by internet? Thanks!

2200. gcc2.5.3 under MiNT on 4Meg ST

Newsgroup: comp.sys.atari.st
Date: 1994-01-31 23:45:02 UTC
From: woodford@esca.com
Message-ID: <1994Jan31.234502.21641@esca.com>
Source record: 193829

I've finally upgraded my stock MultiTOS v1.04 for the Mint v1.08/9
on a.a.u.e. While I was at it, I grabbed the gcc & g++ 2.5.3 binaries
and associated libraries/include files (for both) which claim to
be Mint friendly.

The vanilla C compiler works fine, although gcc-cc1 is half as big
again as my old v1.39! However, the g++ compiler doesn't want to
know. It bombs out very quickly with 'internal compiler error' plus
a reminder to report the bug.

Is this a known problem with this version? Or is it just that g++
is too memory hungry for a 4 meg ST?

If it comes down to system configuration, I have 4Meg, Mint 1.09, TOS1.4
and a 64Mb minixfs partition.

Any ideas?

Cheers, Steve.

>I've got loads. And they work fine for display & printing on anything you like.
>
>So why does this guy want to use Ultrascript to print when he can do it direct ?

The problem is you cannot easily use Ultrascript fonts in PageStream.
You can tell Pagestream where the AFM are, but Ultrascript does not
have PFB files. You have to save to PostScript in PageStream if using
UltraScript fonts, than print using UltraScript (plus you cannot see
what the font looks like in PageStream due to no PFB file).

Why would one want to do this? Well ... the UltraScript fonts print-out
better than some of the corresponding public domain Postscript fonts.
Plus it is nice to printout a document w/o loading PageStream. I like
to save a doc to Postscript, and use UltraScript when I need a printout.

The only thing I hate is that UltraScript does not handle downloadable
fonts. If I mix PageStream fonts with UltraScript fonts, save to
Postscript, and then print with UltraScript, the PageStream fonts do
not come out. Does anybody know how to fix this? Is there a program
to convert PFB files to UltraScript metric files?

>That flash was shields... if you have the space, get a radar scanner,
^^^^^^^^^^^^^^^^^^^^^^

Ahah!
^^^^^^^^^^^^^^

Its on the shopping list. I can afford it, but haven't really got the room (only running a Cobra Mk1, and I like *lots* of cargo space ;-)

>when you have the opponent on screen, hit the ESC key, this will freeze
>the game, you can then click on the baddie.

Good trick this isn't it!

>You can also collect bounties for your kills this way too.

The *very* reason *why* the scanner is on my list!

>I hope this helps.

Sure does :-)

Roland.

@CiX

BTW I actually won against 2 pirates today and delivered my cargo. Its a pity my autopilot kept crashing me on landing (would a dodgy left thruster cause this), but luckily I saved the game and eventually convinced it to land.

Combat is *very* hard, don't you think?

:-)

2203. Re: Mega STE already HAS 1.44 floppy?????

>This was when the mste first came about, so this would apply to the earliest
>mste's. Is anyone sure of any of these 'facts'?

Fact - late model MSTEs had 1.44Mb drives. Mine does anyway ;-)

Earlier ones were pretty debatable. I think its a case of Atari telling
the magazines that the machines would ship with 1.44, whereas they actaully
started shipping with 720k. AFAIK the same was true for the TT.

The manual doesn't say anything about 1.44 drives. Some of the promotional
glossies I had from Atari even got the number of serial ports wrong!

BTW Atari aren't the only culprits. At work we have a large number of
Olivetti 486 PCs. Some come with 1.44 drives and some with 2.88. No logic
as to which will be which.

Roland.

> Thanks,

> Amalaye Oyake

I too purchased Cubase Light with my Falcon, only to discover it wouldn't work. I contacted Steinberg Jones, and they told me that they hadn't tried it on the Falcon yet. While I waited, their service rep. plugged in the disk and tried -- and it crashed.

He told me that it wouldn't work on a TT030 either. It runs on 68000 based STs only. I mailed the program back to Toad, and got a refund.

The question is, how did they get Cubase Light to run on a Falcon? My guess is that what they ran was Cubase Professional, thinking that the "Light" version was equivalent. It is not -- they are very different.

I wound up buying Cubase Pro when they had the "competitive discount" last year. It's excellent, but has so many features that I may never understand, much less use them all. Excellent product, though.

I strongly recommend you get in touch with your dealer and tell them to take back the program. If they don't believe you, tell them to verify it with SJ at 818-993-4161, or write 17700 Raymer St. 1001, Northridge, CA 91325.

Good luck.

Well, I got my Falcon today :) :) . All I can say is, it is
a fabulous machine. Try moving from a hard drive-less, 1 meg
STe to a 4/84 Falcon! It doesn't bother me one bit! Only
encountered one problem so far.... Civ would not work. I
installed it on the hard drive and ran it from ST low to no avail.
Any suggestions? Also, (oooops, I have more than one problem)
I can't seem to turn the volume of the Falcon speaker down when
I play the game, Breakout. Every time I select new game, the
volume goes back to 15! These two things can't take away from
the Falcon, though. It truly is a wonderful machine.
sincerely,
scott tirrell

Sounds like a pretty good plan.. Just a thought.. Why not compile a list of NEW Falcon030 games? I for one really hate to dwell on these old old games from the "old" ST series computers. Who cares if Pac Man works on the Falcon030? :)

If the Falcon030 is the "base model", for the new series, maybe its time to move ahead a little more? Just a couple of thoughts, hopefully will help both ATARI and its users move into the new era of computing.

Hey the old games are cool, and some are still really addictive, but where are these NEW games, with DSP sound and lots of colors all in higher rez?

L8rs,

alberto@terapin.com

P.S. by the way, I have an old 1040 ste.. hoping to get rid of it.

If you are looking only for a removable hard disk, I couldn't agree more.
get the syquest.

flopticals are reasonable for a backup medium, and work ok as an *occasional*
hard disk wanabe. The major problem with flopticals is that they take 20
min to format and there is no backup utility support for them yet. I'm
still waiting for my copy of diamond back 3 and I'll report to the net
on its suitability. However, I have a sneeking suspision that gtar is
the better backup tool. some day I'll find the time to confirm it.

Ohh, of course it would have to be 68030 code, high res color Falcon compatible
if anything.. I did not mean make software that ONLY runs on a TT, but more
like 030 processors and above.. I have actually decided against a TT for now.
I think ATARI has made alot of really gross mistakes in their marketing and
platform development.. Where does the TT fit in? What ATARI should have
offered for TT users is an upgrade to the new TOS 4.x.

I figure that ATARI's plans are to make the Falcon030 the new base to build
from, so soon the STE's/Megas/TT's will be faded out.. Yes, the ST is already
dead.. Not in the sence that theres nothing you can do with it, but that it
won't be developed for.. ST users, don't get defensive, because people out
there are still using 8086's and Apple II's or Commodore 64's and even ATARI
8-bits because they do what the owners want. But if you look at the future of

computing, ATARI has actually made somewhat of a smart move by making the Falcon030 the new base model.. We have major competitors it must try to catch up with.. The Amiga 4000, using a 68040. The IBM Pentium. Macintosh 68040. And soon to be released PowerPC. The ATARI is still at the 030 level, and you cannot hope for ATARI to make such a foolish move as to still consider the 6800's important.

I will wait until the next ATARI computer comes out, hopefully a 68040, running at least 30mzh if not higher, desktop case, seperate keyboard, and the MOST important, Upgrade SLOTS! Yes, that would really make it a hit.. Give it at least 5 slots! Then there could be 24 bit graphics, improved dsp sound cards, anything else that would give it an edge, and allow software developers to work with it.. Not to mention accellerators.. :)

Well just a couple of cents into the piggy bank.

Has nothing to do with Pirating games at all, many people use it to archive disks that don't have a file stucture or they don't wish you to get at there files, one of the STE Sound programs used MSA and a few of the Demos do..

MSA does not let you Pirate games at all, its people that pirate games....

The only thing wrong with MSA is that you can't specify your own number of tracks unless the boot sector supports that number of tracts...

It can only use the boot sector info....

>I've got loads. And they work fine for display & printing on anything you like.
>
>So why does this guy want to use Ultrascript to print when he can do it direct ?

Because my dear friend, UltraScript is a PostScript interpreter/emulation.
That means that I can use the output from UltraScript to do proofing
before I actually send my PS files to the print shop. If I had the money, I
would just buy a PS printer. The output from PageStream direct is NOT a
good representation of what a higher resolution PS printer will output. I
believe that UltraScript on the other had is.

Does that make my request clearer? :-)

ST: Status. "PD" - Public Domain, Freeware, Postcardware etc.
"SH" - Shareware, Dongleware, Poolware etc.
"C1" - Commercial, newer games (full-prize).
"C2" - Commercial, older games (some of them reappeared in
Compilations, others are available as low-budget games,
many of them aren't available any more).

C: Compatiblity. "-" - The game does never run on F030.
"+" - The game runs with ST-Emulators like Backward etc.
"!" - The games runs without modifications (in ST-Low)!

MHZ: Mhz-rate of 68030 (and Blitter). "8" - 68030 with 8 MHz.
"16" - 68030 with 16 MHz.
This row (and the following) aren't important for games with
Compatibility = "!". These are the switches for the ST-Emulators.

DC: Data cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.

AC: Adress cache. "-" - Data cache OFF.
"+" - You can leave the Data cache switched ON.

STE: STE-Bus-Mode. "-" - STE-Bus-Mode is not needed.
"+" - STE-Bus-Mode must be switched ON.

SND: Sound. "-" - The game has no sound on F030.
"+" - The game has slightly distorted sound with ST-Emulation.
"!" - No problems with sound on F030.

HD?: Harddisk installation?. "+" - The game can be installed on HD.
"-" - HD-Installation is not possible.

A "?" means: unknown.

Some hints for ST-Emulators:

1.) If you get 2 Bombs, try the STE-Bus-Emulation-Mode.
2.) If you don't get correct sound, try to switch between "Timer A" and "MFP"-Interrupt. Try "ST-Sound corrected".
3.) If your game is protected and doesn't load properly try to switch off both caches and switch the CPU to 8 MHz.
4.) In Backward always use "TOS patched" and "STE-Bus-Mode". You have no disadvantages when using them.
5.) Set the Bootup-resolution to ST-Low. There are some programs which allow you to alter the Non-Volatile-RAM of the Falcon.
6.) If you have TOS 4.01 try to get TOS 4.02 from Atari! Backward has problems with some (!) TOS 4.01 versions and so are the games.
7.) Known ST-Emulators:
Backward - Lots of switches, nice GEM-Interface, the best!
Magi-Boot - The first ST-Emulator.
Gamefix - German STE-Emulator (TOS-Disk), nice.
VCB - Writes Bootsectors. Switches can be made while playing!
FBoot - Writes Bootsectors. Only Caches ON/OFF, CPU 8/16 MHz.

You have informations about another game? You have some corrections for the list? -> EMail me! This list should be as big as possible and therefore I need your help!

Please EMail me the following:
NAME: The name of the game.
STATUS: Is it PD, Shareware or Commercial?
COMPATIBILITY: Does it run on the F030? Perhaps with a ST-Emulator?
If a ST-Emulator is needed:
MHZ: Do you have to switch the CPU to 8 MHz?
CACHES: Do you have to switch the caches off?
STE-MODE: Do you have to switch to STE-Bus-Mode?
SOUND: Does the game have the proper sound on F030?
HD: Is it possible to install the game on harddisk?

Remember: All informations are subject to error! No warranty that the given information is correct! I'm unable to test all the games in the list!

You can always get the latest copy of this list from:
ftp.uni-kl.de in /pub/atari/doc, name: f_games_list.zip

Thanks to: Michael Papadopoulos, Thomas Binder and Dan Ackerman!

If you have more informations about ST-games or corrections for the list, please EMail me:

That's interesting - how do you make the Falcon faster than a TT with
FastRAM? The benchmarks for the Eagle Sonic board only gives ~10%
speed increase. Now increase your screen res to something useable,
and watch your performance hit the floor.

It probably won't work. However, Gadgets are building Spectre for the
Falcon, which will include System 7 and colour support (allegedly).

> 2. Does anyone have info on K-Spread 4, at least previously from

Hisoft have taken over many of the Kuma products, including Kspread.
Last time I heard, Kspread 4 was being ported to Lattice. Knowing
Hisoft, the new version will work on the Falcon, and with MTOS and
Speedo.

>God this has become a SAD thread hasn't it?

Yes !
I think the conversation should be turned to why it was called TOS in the first place and not Atari OS or something. I mean TOS, it gets you into trouble when you try talking about to non-Atari users!

(Still it's not as bad as 'finger' on Unix :-))

Hey what's that all about ?
It's new for mw that there should be a Eagle '060. Would be a litle hard to
built a machine with an 68060 without any of these chip avaiable...

Some guys in Germany already posted stuff like this and I dont't think
that it's of use to talk about things that are not out officialy.

But I'd buy one... ;-)

It's quit easy: You just use the Mighty Sonic a 32 MHz 68030 Board for
the Falcon. You can put up to 32 MB Fast-RAM on it and with it you are a little
bit faster than a TT. And you got the sound system with the DSP.
No reason to buy the TT.

Aother thing:
Here in Germany OverScan seams to be building a 040 board for the Falcon,
I'll get more information in a few days. But I think _that_ would be really
interesting. But we'll have to see.

SW>>the MFP and a switch ... that's all !
SW>>The only problem: You have to use the switch to choose manually between
SW>>fixed 38400 and "normal" baud rates :-|

You might want to look for 'RSVE' - the docs should be somewhere on the berlin
ftp server. RSVE is a bit more hardware (1 GAL, 1 4040, 1 Crystal Oscillator),
but it enables you to run 38400, 57600 and 115200 bps on your serial line,
and: it's selectable via software, because RSVE replaces the 110, 134.5 and
150 bps rates with the three new, higher ones.

2232. Even more cross compiling with GCC

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 10:39:28 UTC
From: steve@earth.ox.ac.uk
Message-ID: <1994Feb1.103928.10274@zaphod.ox.ac.uk>
Source record: 193669

I've been asked on the Linux 680x0 channel whether the latest versions of GCC for the Atari (compiled with MiNT libs) use the standard GCC frontend. I'm now passing this question on.

The reason this was asked was that the person involved wanted to be able to cross-compile for Linux 680x0 on the Atari TT, and because of this needed to be able to use multiple GCC's using a command line switch. This, he tells me, is one of the reasons he's not started porting Linux to the TT, that and brain-damaged utils which can only handle 8+3 TOS filenames.

I've put him straight about how to get good utils, now it's only GCC.

David White (dwhite@rd.eng.bbc.co.uk) wrote:

DW>I've had my STFM for two years (bought second hand), but pointing out a
DW>typing error doesn't help much. What I really need to know is how many address
DW>bits the ROM uses, not what the badge says.

If you've got the TOS in 2 ROMs, then you need 2* 27C010 or 2* 27C1001 (these
are the same) EPROMS. However, these are not pin-compatible, you need an
adaptor (ROM 28 pins, EPROM 32 pins, not complete 1:1). If there are 6 ROMs,
you need 6 27(C)256 EPROMS. If you have only 2 TOS ROMs, but there are 6
sockets, you can use the 6*27(C)256 (as these don't require an adaptor) by
changing 3 solder bridges on the board - these are labeled '256K/1M' and have
to be set to '256k' for 6 (EP)ROMs and to 1M for 2 (EP)ROMs.

If you have further questions, please *email* me.

1 Technical Info

My email-address will change more than once nexttime. Due to this reason I have an alias, pointing to my actual location - and if it's in the MAUS-Net: G.Castan@physik.uni-stuttgart.de

For easy location of this document at servers and mailboxes, I ask for using the following name(s) and saving the ascii AND TeX versions:
FILENAME=
gdosinfe (english version)
gdosinf18e (when using UNIX) CR+LF should be used when saving at UNIX-Fileservers too, not just LF

2 Introduction

Actually I'm writing a program, that makes his print-out via GDOS. Looking for printer-drivers I faced the problem, that many times no documentation is included to the drivers.

Otherwise it may happen that there are different drivers with the same name.

Here I have briefly collected my experiences with printer-drivers.

This collection doesn't generally want to describe coders how to use printer-drivers (except to problems not mentioned in literature). And you wont find information about the concept or how to install printer drivers. To get this refer to the list at the end of this FAQ.

What I want to exclaim here is more information about the several drivers:

o Where are the drivers available?
o How to distinguish them?
o What are the problems with them?
o Which drivers can be used for certain printers?

If anybody has more experience or questions, please write me. I will face the work to update this FAQ.

Gerd Castan.

3 Motivation

With GDOS it took me 2 hours of coding, to get the screen-output to the printer in maximum quality. And (almost) with no extra work I get output to printers I even don't know.

If there's anybody who wants to write a program with printing options, he should better care of the main job of the programm.

Nobody wants to pay for printer drivers if there's another program that didn't take the coder extra work with such stuff making this program less expensive (and surely better).

The User has - besides the lower price - another advantage. If he uses several programs he needs place for the driver and the fonts only one time on the disc.

SpeedoGDOS is available from Atari-Shops (Atari Competence Center in Germany) now.

The (qualified) feedback to my FAQ has - compared to last autumn - raised remarkable. Due to Speedo the interest in GDOS coming from the coders seems to be bigger.

4 Changes

New chapters/infos are marked with '+', changed ones with '*'. Smaller changes aren't marked.

* Fontsize & Pixelsize
* Some 'Postleitzahlen' (Remember: City codes in Germany changed on July 1st 1993)
+ Offscreen-Bitmaps with NVDI 2.5
+ CLA
+ CoMa
+ Atari Works
+ SpeedoGDOS 4.2

2238. GCC on a 2MB STE??

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 11:32:37 UTC
From: jpb3@ukc.ac.uk
Message-ID: <6691@merlin.ukc.ac.uk>
Source record: 193675

I own a 2mb STE, and was wondering if GCC would run properly on it.

I have heard that it needs a 2.5mb machine, so I'm not sure it will run on my setup.

Also roughly how many MB's of Hard disk space will it take up, as my HDD ALWAYS seems to be full. :-)

ONE more question .. I have seen the GCC archives in atari.archive, but, which archives are necessary to download to start with GCC?

Any help will be appreciated, email me, or post to this group, whichever, it doesn't bother me :-)

John Beranek
Computer Systems Engineer
University of Kent
England.

Well, my rating went from competent to dangerous after a long winded dogfight with between 10 and 20 vipers, high in the atmosphere of Earth. Thank god for turret weapons! I was in the middle of an assassination attempt for the Imperial Navy (I'm a Squire now), when all these vipers started launching...

What's really annoying is they didn't count the kill because the target died by crashing into the ground rather than by my missile...

2242. Falcon Monitors.

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 12:08:05 UTC
From: se1ap@dmu.ac.uk
Message-ID: <1994Feb1.120805.17773@dmu.ac.uk>
Source record: 193679

Hi, I've recently seen a Falcon030 running at a shop. I took some downloaded software to try. Well, it was very embarrasing as most of the programs didn't work on the SVGA monitor that they where using.

The question is, would a MultiSync monitor be able to support ALL Falcon screen modes????

One more point about the Falcon, the internal speaker sounded shite, but I'd love to hear it rigged up to a stereo.

Also, multi-tos was a bit slow, but that's no secret is it?

Thanx....

Alan.

Yes, I'm Dangerous. (finally!)
It takes about 4 times an many kills to go from 'competent' to 'dangerous' as it does to go from 'above average' to 'competent'.

2245. Astrology program available for ftp?

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 12:27:10 UTC
From: sanders@sci.kun.nl
Message-ID: <CKJp9B.4ow@sci.kun.nl>
Source record: 193682

Hello,

Does anybody know of an astrology program for the ST? I browsed through an a.a.u.e index I downloaded some time ago (couldn't get in now) but couldn't find anything except some star plotters. I know there must exist at least one of this kind, since the Atari Club Nederland carries it in their PD library.

Anyone?

And oh yes, it is *not* for me; I'm a Capricorn and we don't believe in astrology.

Thanks in advance,
Sander STOks

2247. Music Score Printing ?

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 13:10:42 UTC
From: rgibson@cs.strath.ac.uk
Message-ID: <2ilkci$253@hunter-10.cs.strath.ac.uk>
Source record: 193687

I've got a 1040STE and a Cannon BJ10sx printer and I'm wondering whether there are any 'cheapish' programs to print out music score.

It doesn't have to be anything fancy - basic functions like transposing are all I really need. (And the ability to print them out ;-)

Ideally, I could do with a PD program but as long as it's not too expensive then I'd like to know more.

Any replies are welcome (even the usual sarcastic jokes we usually get around here ;-)

Ta much!

Ronnie

|> standard system format it will give you 1.44!!! Can this be right?

Well mine certainly doesn't. The first Mega STe's came with DD drives like the normal STe's did. At some point Atari first revamped the circuit board to allow easier fitting of a HD drive (ie added a track for the 16 MHz clock signal needed, then re-worked the floppy controller chip to allow it to function at the required 16 MHz, and then finally went the whole hog and supplied them with HD drives.

Later,

2249. Falcon JPEG Viewer Update

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 13:47:34 UTC
From: oldcornd@cs.man.ac.uk
Message-ID: <1994Feb1.134734@cs.man.ac.uk>
Source record: 193690

I've recently uploaded the latest version (well more or less the latest) of my fast JPEG viewer to Umich and thence to its mirrors. The new one is 'jpegv218a.zip' (version 2.18 was errr... a bit crackered) and has lots of new features, including new file formats, ability to read and write JPEGs and Targas, and is a bit faster. It's also much less extreme in its use of memory, and reports errors on a much more regular basis.

Upload it and have a look, and remember if you want you can get the DSP version which is now even faster and averages about 6 seconds for a 640x480 JPEG - it's faster than GIF, and compares very favourably with Targa!

Dave Oldcorn (Volume 11 Software Development).

From: mkite@lincoln.gpsemi.com
Message-ID: <CKJt3J.51E@lincoln.gpsemi.com>
Source record: 193692

Hi,

I've got a Mega STe 2Mb machine with an SM124 monochrome monitor and as I can't manage to find a colour monitor at the moment I have been trying to use mgif to view some gifs I've got. Unfortunately, when I start it from the desktop, it displays a screen of text and says "press any key to continue" and when I press any key it just dumps me back to the desktop :-(

Anyone had any success with this program / am I doing something wrong/dim ?

Any ideas ?

Theodore L Hopman (thopman@uoguelph.ca) wrote:

: I recently obtained for myself POVRay 2.1, and after much struggle I got
: it to work. I'm not very happy with it, because it won't run with my T25
: turned on. Is there a reason for this? CoNNect seems to have the same
: problem. Especially for the raytracer, which is only doing calculations,
: it seems to me that it should run just fine at 25 MHz. If there's no way
: I can get it to work at 25 MHz, is there any way I can get it to use my
: math coprocessor? Or would I have to compile the sources myself for that?
: And, while I'm on the subject, why, out of curiousity, is the executable a
: .GTP file? It doesn't use a menu, so I can't multitask it under Geneva,

POVRay 2.1 gives a menu (just the Desk bit) and displays the output in a window as it it generated if the +d option is used. It works fine with desk accessories, so should work with Geneva.

: and it's not a TOS program, so I can't multitask it under MiNT.

It might run as a TOS program if you rename it and don't use +d. (Of course it might not. I haven't tried it like that.)

>the fifth or so line has #k followed by codes for the equivilant letter for
>each menu entry (or 00 for none), but about halfway through the line, there is
.....

hello
i know your problem.
the solution: the "newdesk.inf" has to have 45 spaces (varies in different tos-
versions) behind the "#d" (4th line)!!
they probably dissapeared, since you edited the "newdesk.inf"-file with an
editor that deletes the spaces at the end of a line automatically (7up...).
you should use an editor that doesn't do this. (qed, tempus, everest?)

took me long time to check that out :-)
good luck.

|> I have been trying to contact him for a couple of months as some of the
|> features in FS are better then BlowUp Hard II in my opinion. So far though
|> no response to my mails at all.
I don't know if the manual in the UK states our e-mail adresses but you and all others interested in BlowUP030 may get into contact with us over the internet: Georg Acher (acher@...), Michael Eberl (eberl@...) and me, with the adress as stated below.
We will always try to include things that make BlowUP030 better.
Look for the new version (1.7) coming to the UK next week (immediate resolution switch - without leaving the running application; 76Hz in Compatibility modes and noconfigured resolutions [on multiscans] improved PAL compatibility for TV)

|> Not as far as I know, as he did have his own design of hardware unit up
|> and running for FS, which I know from messages from him did out perform
|> BlowUp.
There is no real way to get better from the point of HW.
There are three classes:

1) FS (+), HighVidelity (+), [the thing from H&S],
Screen-BlowUp(ddd) and BlowUP030 Soft-only
25 & 32 MHz
1.5) ScreenWonder (H&S) 40MHz (their first try of a copy)
2) ScreenWonder pro (H&S), BlowUP030 Hard I
25 & 32 & 50 MHz

3) ScreenBlaster II???, BlowUP030 Hard II
25 & 32 & 33-51MHz

1) Is the first step and no F030 should be sould without at least this.
2) Is very good for multiscans and gets the maximum the F030 can in 2,4 & 16 colors.
3) Is necessary for old fixed-freq-VGA and SM124. And improves 256 and TC about 5% over 2).

Hope this makes it clear

The version I have is .TTP and multitasks perfectly under MTOS (as most other
programs!)... Try changing the extension to TTP and run it as a TTP program
under MTOS or MiNT!

2257. Re: Falcon Monitors.

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 14:53:13 UTC
From: Iain.Laskey@barclays.co.uk
Message-ID: <CKJw0p.M4n@barclays.co.uk>
Source record: 193699

A multisync looks just like an SVGA/VGA monitor to a Falcon so it wont let you run stuff that wants an RGB monitor. There is so much PD software for the Falcon that only runs under RGB, it's ridiculous. It can't be that hard making it monitor independant. The depressing thing is that some multisyncs can handle the RGB output rates if the Falcon would letthem. There is a prog called rez fooler that may help here. It may be possible to make a custom lead that lets you flick a switch to make the falcon think an RGB monitor is attached.
If you had fun when having a mono and a colour monitor on your ST, the fun is just starting now :-)

2258. JAGUAR got one, WHY not TT ?

Newsgroup: comp.sys.atari.st

hello,
I'm mot that familiar with the News systems, but I realized that
there's a new atari group called alt.atari.jaguar or something like
it... (definately something beginning with alt... ;-))

BUT how come there's none for atari- TT !

It would be so nice to know that all the topics one is browsing are for
"real computer" not for a games machine... (daylight saving time
-remember ?)

WHY ?

Hi,
I'm lookig for certain items for TT

software:
virtual memory expansion for normal TOS. I think it is called
VRAM and I remember hearing that from version 2.0 onward it
doesn't require any TT-(fast)-RAM in order to work...so fits
in to any TT....

any info on this one or a similar sollution ? (where&how_much)

hardware:
what are my choices in graphick cards for TT
-which have the most drivers ie. which works with most programs

what are my choices for TT-FAST-RAM expansion (got currently 4mb
of TT-ram on ATARI varsion 1 mem.board with 1mb _simms_ and
three jumpers)... prices ?

is there a single monitor that could display all TT-resolutions
(and st-resolutions in TT where their frequenzy has been altered
from original ST hz...)

and I just hate to go through all that ST-crap in thsi group to get the
answers so, please reply by e-mail... or answer through a
comp.sys.atari.tt if they finally make one !!!

chiao ! Markku

Hi,
I'd like some comments on PD C packages out there. Or, if you'd like to suggest a low-priced C, comments on that too! I'd like to get it to brush up on my C programming and need it ASAP.

Thanx,
Bernard

2261. Contributors needed for non-profit zine

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 15:29:06 UTC

Message-ID: <1994Feb1.152906.13124@unix.brighton.ac.uk>
Source record: 193754

PDP Magazine is a paper-based magazine for all serious computer users who have an interrest in PD/Shareware. At the moment it caters for Atari and Amiga owners. A typical issue may include:

Full page and mini reviews of PD/Shareware software (inc. screen shots)

"How To Use" guide - a step by step guide to a program

Programming in STOS, AMOS, C, GFA etc...

PD libraries reviewed

Diskzines reviewed

+ news, general interest, chit-chat etc...

PDP has been going since July 1991 and has come along way since it's start as a games and demo fanzine.

HELP!!!!!!! - PDP needs more people to send in contributions. No age limit, anywhere all over the world, any subject. We need people to review software, people to write about MiNT and UNIX, we need Falcon owners.

Even if you don't think you have much to write about, think again! Have your own page where each issue you can have what ever you want on it - just talk about the computing world in general!

We desperatly need Amiga owners to contribute, but we also need many more Atari owners.

Offers of help can be sent via email to st39@unix.bton.ac.uk or by snail mail to: PDP Magazine
22 The Birches
South Wootton
Kings Lynn
Norfolk
England

For more info about PDP - finger st39@unix.bton.ac.uk (it should work now!)

PDP is run by a group of computer students and is non-profit making.

I didn't read Ofir's article, but I do think the distinction between the
different types of benchmark ought to be considered.

There are basically three types of benchmark: Test, Synthesis and
Application. Test benchmarks are where you exercise well defined features
of a system. They have the disadvantage that you assume the tests are
relevant, and you can't measure the performance change when the features
interact with each other. GemBench is a test benchmark.

Synthetic benchmarks are programs synthesised somehow from data collected on
actual programs. Whetstone, Dhrystone, Hartstone etc. etc. are examples of
synthetic benchmarks. Synthetic benchmarks have the disadvantage in that
they are only as good as the original data and the skill of the benchmark
constructor.

Application benchmarks measure performance of a "real world" application
that is considered to be representative of some class of applications that
you're interested in. The problem with application benchmarks is that you
assume the program is relevant, and you often don't know what it's doing.

From what I've seen, GemBench seems to be performing the right sort of
tests. It is therefore a good way of comparing Atari systems (you keep the
program the same and vary the system only).

>>Such benchmarks can always be used to mislead people (See Systems Solutions
>>misuse of your own program in their T28/T36 ads, for example; they do not
>>compare 8MHz with 28/36MHz, but compare 8 w/o NVDI to 28/36 with).
>
>True, but you can't blame me for that.

All benchmarks can be misused, and some forms of benchmark are more useful
than others (e.g. Dhrystone is a poor synthetic benchmark, we've known it
for years, the author even wrote a paper on its defects).

>A multisync looks just like an SVGA/VGA monitor to a Falcon so it wont let you
>run stuff that wants an RGB monitor. There is so much PD software for the Falcon
>that only runs under RGB, it's ridiculous. It can't be that hard making it
>monitor independant.

Its not that hard to make programs that are monitor independent, the worst offenders for running only on RGB/TV are demos and games. BUT there are good reasons for this:

1. VGA has a 60hz refresh rate which means there is less time per screen refresh to do all the screen redraws and calculations.

2. VGA steals more memory bandwidth since the display is has a higher horizontal scan rate, which basically means redrawing a screen or doing any memory access is slower on a VGA.

3. You need two sets of values for the video mode setup, this may seem trivial, but its agro from a programming point of view. The XBIOS calls provided for video mode setup are generally a bit quirky, programs like NVDI don't help since it actually changes the way these calls work, so *many* programs which change video mode will not work correctly with NVDI installed esp. demos.

4. Most people with VGA/SVGA monitors tend to use display enhancers like blowup /screenblaster hardware or software enhancers. This is more *agro* for applications going through the XBIOS , since a request for a 640*480 screen may result in an 800*608 screen being displayed etc.

Personally I don't intend to use the XBIOS calls anymore because of such problems,IMHO hitting the h/ware is more compatible then going through the XBIOS, at least you are GUARANTEED of the getting the res you ask for ;-)

Hmm, there *are* a growing number of Falcon messages. Despite that, I
wouldn't split the groups as suggested. Instead, make a
comp.sys.atari.st.games group. I don't want to read about games, but
there is stuff in the st and st.tech groups I want to read.

Just a thought...

Any benchmarks? Does running higher resolution screens reduce the
performance of the Falcon?

I asked System Solutions (one of the better UK companies in Atari
hardware and software), and they were not impressed with *either* of
the Sonic boards, even with buckets of RAM. They were going to drop it
in preference of another board (sorry, Karl didn't give me the name)

Does anyone use this new operating system. I am sure any details would be appreciated by the board. How does it compare with MultiTOS, Geneva, the cartridge thing for the ST, etc. Can any of the multi-tasking operating systems for the ST apart from MTOS be used with GEM. What is the replacement "GEM" that Mag!X uses like? How much memory does it require? How many programs can you realistically attempt to run at one time and still get a reasonable response time? How compatible is it with ST programs?

2268. WANTED: ST/TT/FALCON030 Leader, Music, Programmer SIGOps for FN

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 17:21:25 UTC
From: xx004@cleveland.Freenet.Edu
Message-ID: <2im32m$qdd@usenet.INS.CWRU.Edu>
Source record: 193762

The Cleveland Free-Net Atari SIG is looking for enthusiastic and committed Atari ST/TT/FALCON030 SIGOps.

We, at the Cleveland Free-Net Atari SIG, are working hard on a new version of the Atari SIG that will be competitive with Atari SIGs on other pay systems. This Atari SIG will be completely free to use and will give users an opportunity to contribute to its success.

One of the Atari ST/TT/FALCON030 SIGOps that we are looking for would take a leading role in organizing the 16/32-Bit Computers Support Area. This means making sure text-files are updated, useful information is constantly being added, posting news, and making sure the file listings is up-to-date.

The SIGOp taking this leading role should have the enthusiasm and energy to make this support area a success. If you enjoy using your Atari 16/32-bit computer and would like to help others get the most out of their computer, this position might be for you.

The second Atari ST/TT/FALCON030 SIGOp that we are looking for would organize the Music Area. One area which Atari still has a hold on is in the music area and we would like to help people that use Atari computers for this reason. If you know a lot about Atari computers for the purpose of creating music and you would like to see others getting the most music out of their Atari computer, this position might be for you.

The third and final SIGOp that we are looking for is an ST/TT/FALCON030 programming and developing SIGOp. This person will take control of the Programming/Developing Forum and organize it. This person should also be interested in starting programming projects and helping other users with programming problems. Knowlege of hardware aspects of the ST/TT/FALCON030 computers is definitely a plus.

If you are interested, you must be willing and have the capability of being an Atari SIGOp for at least one year. This is the minimum.

Since we are working REALLY hard on making the Cleveland Free-Net Atari SIG just as good as any pay Atari SIG, you will need to be able to put time into making the SIG a success.

The leadership Atari 16/32-bit SIGOp position will require at least 8 hours a week.

The Music and Programming/Developing SIGOp positions will require at least 5 hours a week.

Please be aware that it has been very difficult to "telnet" into the Cleveland Free-Net as of late. This is due to a decrease in the amount of connections until Free-Net gets a new computer. This means that it will take a big effort just to get onto the system from OUTSIDE the Cleveland area.

If you are from the Cleveland area, SIGOps have a private SysOp line that they will be able to use that is open most of the time.

__All__ Atari SIGOps have an unlimited time limit. This is one of the advantages of being a SIGOp.

This is a non-paying position. All the Atari SIGOps are volunteers. We do it because we like to help others get the most out of their Atari product.

If you are interested, please contact the Atari SIG at:

xx004@cleveland.freenet.edu

Please include information about yourself such as where you are from, what you do, and how familiar you are with Atari computers.

Thank you.

Len Stys, SIG Manager
Cleveland Free-Net Atari SIG

>spreadsheet? Can it mix charts and formulas in one sheet (meaning that the
>chart should NOT be in a window of it's own)? How much does it cost? And
>finally: Is there anyone who wants to sell me a used copy of K-Spread 4?

Font and size can be specified, but only for the entire sheet - as far as I can tell, there's no way to apply a font/size combination to only part of a sheet. You can specify bold/italic attributes for individual text regions within a worksheet.

Charts appear in a separate window; though there is a choice of "solid" or "line" charts, the results are pretty poor IMHO. Charts are printed separately to worksheets, though the print dialog does allow the positioning of the chart/sheet on the page, so it should be possible to make sure that the sheet leaves room for a chart to be printed later. Unfortunately, there's no page preview mode to let you know how many pages your sheet will spread across.

Having said all that, K-Spread 4 is a very nicely done GUI spreadsheet, and it supports the WKS and WK1 formats, so it's possible to work with files from PCs - I spent last weekend working on some WK1 worksheets that originated in Excel 4 on a PC: if only more ST software houses realised that some of us need to work with files produced on other platforms ... but that's another story.

I don't know about Falcon/MTOS/SpeedoGDOS compatibility. If it isn't already, I suspect it will be once Hisoft have revamped the product and released it under their name.

2270. Who's Who in the Atari Community (e-mail list)

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 17:44:38 UTC
From: xx004@cleveland.Freenet.Edu
Message-ID: <2im4e6$rn7@usenet.INS.CWRU.Edu>
Source record: 193765
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit,comp.sys.atari.advocacy

Who's Who in the Atari Community

The Cleveland Free-Net Atari SIG is compiling a list of people that are members of the Atari Community that do things that help Atari users and the Atari Community in some way on a continous basis. They are Atari BBS sysops, dealers, developers, publishers, user group presidents, writers, FAQ maintainers, etc. They are even Atari employees.

Unless you send us your name, e-mail address(es), and information on what you do in the Atari Community, you will not be included on this list.

We will not say that "John Smith" should be on the list and then find his e-mail address and then put him on the list. ONLY people that have given us permission by sending us this information will be on the list.
If they do not, we will assume that they do not want to be on the list because of privacy reasons.

If you contribute some way to help others in the Atari Community on a continuous basis and would like to be made more available through e-mail incase someone wishes to contact you, please send e-mail to the Cleveland Free-Net Atari SIG at: xx004@cleveland.Freenet.edu

Everyone included on this list will be arranged in alphabetical order.

Again, the only thing you need to do to be on this list is to contribute in some way on a continuous basis to the Atari Community.

This is a serious list which should help everyone in the Atari Community communicate better with one another.

Please remember to send us your name, e-mail address, and what you do in the Atari Community. Any additional information that you include is for the benefit of the users of this list.

Thank you.

Len Stys, SIG Manager
Cleveland Free-Net Atari SIG

All Falcon modes apart from 'True Colour' use Bitplanes, in true colour each pixel is the actual RGB colour value. 5bits RED/ BLUE and 6 bits GREEN. (5 bits of GREEN if in OVERLAY mode , where the last bit is used to oveerlay gfx from an external source i.e. genlocking)

All ST modes use Bitplanes.

There are no 'special' modes as such. (although the ST can do overscan with some hardware tricks).

>--
>--
>- Raist
> Department of Electrical and Computer Engineering

I managed 69k in 1/50th of a second using the blitter in TRUE Colour mode,
BUT since you get more contention in this mode due the high bandwidth needed
to display 16 bit colour I would imagine a figure of 80k per 1/50th of a second
would be about right in a 256 colour mode.
A point to note is that the blitter performance is the same for all logical
operations, for example you can EOR a block of memory and Shift it at the same
time and it will take exactly the same time as a straight move, this was not
the case for the STE blitter and is not the case for the Amiga blitter.

From: saj@chinet.chinet.com
Message-ID: <CKK52F.Ju@chinet.chinet.com>
Source record: 193747

I have to stick up for Lattice C. I've been pushing 5.6 fairly hard for the last 2 weeks, and it works fine. The install program didn't copy over everything it should have, and I'm still not quite happy with the make utility (possibly because I got used to the somewhat idiosyncratic make that came with MWC). The project mechanism in the integrated environment handles a decent fraction of what make would have done. The debugger hits the level of 'hard-core-ness' that I usually need (I'd like to have several debuggers to choose from, though). The crashes I've had have been due to the code I'm working on failing to clean up after itself (and in particular to some places where I assumed WORD=int, which it does in MWC, but not by default in LC).

2274. FOR SALE: 1040STf, XtraRAM 3D

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 18:11:33 UTC
From: lancer@bigwpi.WPI.EDU
Message-ID: <2im60l$lcr@bigboote.WPI.EDU>
Source record: 193768

I have a 1040STf with an installed XtraRAM 3D board for sale.

The computer is a standard, used but still functional 1040, though the board RAM seems to have some problems.

Therefore I have installed a ram upgrade board. The board takes 32 1MBIT DIPP DRAMs. I have installed 16, so the ST has 2.5 megs of RAM right now. With the board the ST seems to work fine.

I'll sell the computer and board for $150 or just the RAM board with 2 megs on it for $90.

The ST comes with original disks and documentation and mouse.

please email any questions.

.s.

Source record: 193769

Hi to the group:

I am looking for information regarding the ATARI Falcon and
ST graphics.

In particular I would like to know the modes that the Falcon
and the ST support a 'bitplane' architecture (if any) , and 'chunky modes'
and any other 'special mode.'

Thanks in advance,

Raist

2276. Falcon's BLiTTER perf.

Newsgroup: comp.sys.atari.st
Date: 1994-02-01 18:20:01 UTC
From: raist@rmece02.upr.clu.edu
Message-ID: <1994Feb1.182001.39717@rmece02.upr.clu.edu>
Source record: 193770

Does anybody knows what's the maximum Falcon's
BLiTTER performance for moving memory?

I heard something like 80k in 1/50th of a second, but
sounds a little too big for me. Anyone?

Thanks in advance,

Raist

How are the bitplanes on the ST configured... I mean, are they bitplanes
as in a contiguous-rectangular area or are they mixed in.

Just to clear this up, I can tell you for a fact that Hisoft use a fully
decimal numbering system for their products... therefore 1.03 is a lower
number than 1.10 and 1.10 is therefore a later version. As far as I know,
this is true of all Hisoft products. Devpac 3.10, for instance, is a much
improved beast than 3.01.

>choice of modem also very welcome.

No, any modem will do... I use a TKR1496 and it works just fine. Comms
software? My favourite is Connect... which is shareware and is available
in pub/atari/Telecomm on the atari.archive.umich.edu... version 2.44 is
the latest I know of - look for an 'E' in the filename to denote the
English version. You should find info in the archive which describes how
to register in your country of origin.

Apart from that - and this is a personal preference thing, so let's not
have too many flames - everything else apart from STalker is crap.

It's amazing - check out the tubular bells demo that's going around,
they've a bass sound that wouldn't sound bad coming from a K2000.

>Also, multi-tos was a bit slow, but that's no secret is it?

I've seen the MTOS that's available to developers and it's much faster -
but it looks like Mag!x is likely to blow it away in terms of speed and
(probably) compatibility.

No it's not, you have MUCH more CPU time to play with in RGB modes, and you can
do a few tricks not possible on VGA. Also, you can use a much wider TrueColour
screen ..

There's a reason why demos/games will use RGB, trust me!

r.e. Bitstream editors rare?

If you purchased Timeworks2 for the IBM in the U.S., Bitstream had an offer last year to purchase their editor for only $10. As far as the atari editor goes it's not that hard to make, just not legal to distribute unless you want to pay the licensing fees. I know of a couple of dev houses that have prototypes running, but what to do with them ?

Everyone see Atari mentioned in the gossip column of the Jan 31 InfoWorld? 'Cringely' says the Jaguar isn't selling so well, and speculates that either IBM or <someone else....Sega, maybe?> might want to buy the company and basically use it as a game trademark. He also speculates on an enhanced Jag from the present crowd, though.

I personally think that if the Tramiels didn't get a kick out of owning a computer company, Atari would have folded long ago--like about when the size of the Federated fiasco came out. So I don't think Atari is for sale, and I think we'll see a Falcon+ before a Jaguar II. But I know even less than Cringely.

Heiko Hartmann writes:
: Hi!

: I want to compile a "List of Games for F030". This list should contain the most ST-games with some notes about their Falcon-compatibility.

Oh please, not another one. I happen to think this is a very good idea (and a necessary one) but you are at least the fourth person who has tried to do this, among them Kevin Grubb (who has just replied), Falcon Owners Group (UK), and someone else who has just posted his list here.

Why not pool resources, so to speak, and just one person keep a list. This should not be too much to ask. I do not have a Falcon but I hope to get one when they start being common in the second-hand market. I cannot even nearly afford one at the new price.

Steve Taylor.

Martin Kite writes:
: Hi,

: I've got a Mega STe 2Mb machine with an SM124 monochrome monitor and as I can't
: manage to find a colour monitor at the moment I have been trying to use mgif to
: view some gifs I've got. Unfortunately, when I start it from the desktop, it
: displays a screen of text and says "press any key to continue" and when I press
: any key it just dumps me back to the desktop :-(

: Anyone had any success with this program / am I doing something wrong/dim ?

: Any ideas ?

I have had a program for just over a month, called GIFFER which may have been in an archive called 'mgif' - I didn't keep that. It is 15275 bytes long, which should help identify it. It displays gifs on a mono screen, using dithering if necessary (3 types).

Anyway, the point I am trying to make is that it is a TTP - i.e. it needs to be given the name of the GIF to display on its command line, unless it is installed as an application with the .GIF extender, which is how I use it.

If your 'mgif' is similar, this may be the solution.

Alternatively, the gifs you are trying to view may not quite be in a standard format - a surprising number are not. GIFFER just reject these, but if I load them into 'xv' on a Sun workstation, it says 'GIF file is truncated - winging it.'. Then if I save it, it will load into GIFFER without problems.

Steve Taylor.

PS - Martin, how about that STE you were going to sell me?

>
>Not that I support this... but it is useful for one thing.... pirating
> games.
>The amiga has a similar program.

Hmm. Just how do you copy protected disks with MSA!? It just does not work. Sure it does a sector copy, but if it has any decent protection on it, a disk will not be copied with MSA successfully.

All MSA does is allow you to transfer a sector-loading (unprotected) disk to a file so that you can transfer it over electronic networks. The primary use for this is for Demos which are sector loaders to stop 'lamers' from hacking into the programs and text-editing things ...

Sure the Amiga has a similar thing, called DMS or something like that, but so does the PC, the MAC, whatever. So MSA isn't a pirating tool, just merely another backup tool.

Just my 5 cents worth ....

Karl.

P.S. Only use MSA 2.3+ ... or above! Older versions (1.4 for example) were a real dog ... and don't use TOS 1.0 - there is a strange bug that makes MSA crash when you select the second MSA file!

I do remember seeing some packet radio software several years ago (in answer to a similar question). You might try the index file for atari.archive.umich.edu.

The mirrors at wuarchive got screwed due to a system crash apparently.

2304. NVDI questions

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 00:45:29 UTC
From: boyd@gauss.math.fsu.edu
Message-ID: <2imt39$9gh@mailer.fsu.edu>
Source record: 193701

I just got NDVI 2.11. It appears to be dated 1/10/92 (!). I am running it on a Mega2ST, and soon a MegaSTE. Here are the questions:

1. Is 2.5 the latest version?

2. How many versions were there between 2.11 and 2.5? I was under the impression that it was only one version behind, but that sounds like a big jump to me.

3. Other than Falcon compatibility, what else changed in 2.5?

4. What is Bela Computer's upgrade policy? I presume there aren't any patch programs out there to update my version 2.11.

5. I now need to replace the Warp9 screen saver. Any suggestions?

FYI, NVDI "feels" significantly faster than Warp9 while using Connect. Using Qindex22.prg (the benchmark program that comes with Warp9) indicates that NDVI is actually a bit slower than Warp9, but the test is mostly of TOS string stuff and probably misleading. My understanding is that NVDI is better for GEM graphics, and Connect seems to bear this out. I intend to grab GEMBench and see what the results are.

>Is this a known problem with this version? Or is it just that g++
>is too memory hungry for a 4 meg ST?

I think your setup may have other problesm. However I've found even GCC
under MTOS pretty tight in 4MB. I've not had much success with 2.4.5 as
I get lots of errors which seem to be memory related. For day to day I use
GCC 2.3.3, and even with this I have to revert to plain straight MiNT
occasionally.

The last G++ I ran was 1.40. In terms of relative size to the GCC 1.40,
I would have thought that G++ 2.XX would be very tight in 4MB

Hints from Emily Postnews
==========

(Thanks to John Henders (jhenders@jonh.wimsey.bc.ca) for this bit of _humor_.)

Emily Postnews Visits comp.sys.atari.st

(Due to popular demand, (well at least one persone asked anyways), Emily has taken time out of her busy schedule to answer a few commonly asked questions specific to c.s.a.st.)

Dear Emily.
Some Amiga user is raving on c.s.a.st about how wonderful
his computer is, and how awful mine is. What should I do?
signed My Computer is NOT a Toy.

Dear My Computer, etc,etc.
Many people's egos are so tied to their possessions, they
have to affirm their existance by raving about the superiority
of their machine to anyone who will listen. You should immediately
flame these people into cinders, using every rumour or misconception
you've ever heard about their brand of computer, as this will cause
lots of posts, and develop into a massive flame war, which is one
of the main reasons most people read c.s.a.st. If this didn't happen
every six months, everybody would unsubscibe to this newsgroups from
boredom.
Or, you could put comp.sys.amiga.advocacy in the Followup to:
line, and any article replying to yours would go to the newsgroup
designed for this discussion.
Or, if your newsreader supports it, you could build a KILL FILE,
which eliminates any post that has the word Amiga in it.

Kill files can be created in rn and trn by hitting the 'K' key.
This will make a kill file based on the article you were reading
at the time. Then control K will put that file in the editor for you
to play with. You use the same regexp commands here that are in rn.
For example. /[Ff]oo/h:j would search all headers of unread articles
for both Foo and foo, and junk them. Check the docs for your newsreader
for further details.

Dear Emily.
I like flame wars, and want to start one of my own, so my name
will be as famous as Richard Covert's.
Signed, Too much Time on My Hands.

Dear Too much time.
Sorry it took so long to reply, but Richard's in my kill file
and someone had to forward your post to me, or I'd never have seen it.

Flame wars are fun. They're the main reason people creted Usenet,
and should be encouraged at every opertunity.
Some of the most common tricks for starting flame wars are as
follows.
1: Post a note in another newsgroup telling all the users there that
they own a piece of junk, and if they had a half a brain, they'd have the
same computer you do, as it's obviously the best.
2: Toss a bit of slander against another computer in a totally
unrelated post. This guarantees a follow up, even if your original
post wasn't of any interest.
3: Create a signature file that has a put down of another computer
in it. This will get flame wars going in threads that have completely
unrelated Subject: lines, thus slipping through all but he most exacting
kill files.
I hope you find these tips handy in creating your next flame war.
And just remember, your computer MUST be the best, after all, it's yours.

How do I become a developer for the Atari ST?
==========

Contact Bill Rehbok, (408)745-2022

[UNITED STATES ONLY. IF YOU LIVE OUTSIDE THE UNITED STATES, CONTACT
YOUR COUNTRY'S ATARI HEADQUARTERS FOR MORE INFORMATION.]

Bill can explain the program to you, and send an information packet if you
desire.

Atari has gone to a 2-tier developer membership. The 'higher quality'
developer support goes to commercial developers, and costs $250. The
'no-hand-holding, no announcement of company future products, no access
to discounted hardware' goes to noncommercial developers, at an initial cost
of $125, plus $50 renewal fee each year.

Both tiers receive the ST/TT Developer Kit and all developers have to fill
in an application form and a non-disclosure agreement. Contact Bill for

more information.

Atari is now selling the developer's kit (or parts of it) seperately. No project-in-development or non-disclosure agreement is necessary.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on GEnie in January (of ????) by John Townsend. The original also appeared in the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA 22170). It has since found its way to me, and is being posted to comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but that it cannot be dubbed "official" unless it originates, on paper, from Atari. This makes sense, as electronic communications are easily modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and GEM return codes which appears to be correct. The tables have been modified to reflect his information.

The following is an unofficial list of the errors that can appear while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0

What is Free-Net and how can I get access?
==========

A "Remodeled" Atari S.I.G. Opens

By now many of you have heard of the Cleveland Freenet, or more specifically the Atari S.I.G. on the Cleveland Freenet. For those who haven't, the Cleveland Freenet is an experimental computer system providing free public community telecomputing. Basically, it's a lot like a public library of the future. Many of these systems are popping up all over the country. Don't be surprised if one pops up in your neighborhood in the future.

Recently the Atari SIG has undergone a significant face-lift. All the regular areas are intact including its news sections, user group newsletter, online magazine sections, general as well as specific computer discussion boards (8 bit, 16/32 bit, Lynx, Portfolio), and our weekly Sunday night multi-chat conference.

The conference starts at 8pm EST sharp and is on channel "+Ataricon". What the staff at the Atari SIG has added, has given the Atari SIG the potential to cover all grounds of Atari and its related products.

The most noticeable addition to the Atari SIG is the Programming and Development Forum. This forum is intended to be used by developers, professional programmers, and Atari hackers (the old definition of "hacker") as a means to share ideas, help each other out, and find out the latest technical information on Atari's products. This board is ran by newly acquired SIG Operator, Peter Haller, a professional programmer who is running developer sections on hardware and software development, programming, MIDI applications development, Graphics Design, plus many other sections that can definitely become a programmer and developer's dream come true!

Last, but definitely not least, the Atari SIG has a restructured Product Info and Support Board and a new Special Applications Board. The Support Board includes a vast library of support lists. These lists range anywhere from phone numbers of Atari dealers and producers, to software reviews for 8 bit, 16/32 bit, Lynx, and Portfolio software. To sum it all up this area covers what's out there, who makes it, and how to get it for all Atari products. The Special Applications Board is just starting out. Currently there is an area for users of MIDI on the ST. MIDI users are encouraged to use this as a means to discuss MIDI related topics. This section is expected to expand in the future.

Accessing the Atari SIG has never been easier. One can access it via Internet by telenet'ing to 129.22.8.75 or "Freenet-in-b.cwru.edu" or by calling (216) 368-3888 300/1200/2400 bps. Once on the system, a user can apply for an account application and logon as a visitor. Once here, simply type "Go Atari" to get to the Atari SIG. A visitor can go anywhere on the Freenet and can read anything. They can't

post messages until they get their permanent accounts, however.

For additional information on obtaining access to Freenet write to
myself via the e-mail addresses above or by writing the SIG at its US
mail address:
The Atari SIG
P.O. Box 21815
Cleveland, OH 44121 USA

Lastly, a freenet application is available in the mail by writing a
request to the above address if you rather not download it from Freenet.

The Atari SIG is ready to serve the thousands of Atarians throughout
the world. We look forward to seeing you all real soon! Remember the
staff of the Atari SIG are volunteering their time for no pay and the
Cleveland Freenet, as well as the Atari S.I.G., is a non-profit organization
existing for the free exchange of information.

Cover Price: US $1.00 Canada $1.45 UK 1.50 (AtariUser is available for free
[$6.00/50 magazine shipping charge] from participating computer dealers,
bookstores & user groups!)

Subcription Rate: $21.30 US Bulkrate, $41.30 US First Class.
Address: AtariUser, 113 W. College Street, Covina, CA 91723 USA

Current Notes, published by Current Notes Inc.

Cover Price: US $3.95

Subscription Rate: $27.00/year (Atari clubs registered with Current Notes may
subscribe at $23.00/year) US, $35.00/year (Canadian club members at $31/year)
Canadian, Foreign rate $44/year.

Address: Current Notes Inc., 122 N. Johnson Rd., Sterling, VA 22170 USA

Atari Interface:

Write for a free sample copy of the Atari Interface magazine
(Unicorn Publications, 3487 Braeburn Circle, Ann Arbor, MI 48108)

AIM is soon to be available in Canada, Europe and Mexico, and should be in all local WaldenSoftware stores and many bookstores. If your "local" Atari dealer doesn't have it, he should be able to get it for you...

UK Mags:
(Thanks to Sam Marshall <samm@castle.edinburgh.ac.uk> and Kevin Busby <kevinb@syma.sussex.ac.uk> for some of the info here.)

ST Applications:
---

formerly the ST Club Newsletter, this is now the only non-games mag in the UK (although see ST World below). Approx. 4,500 copies per issue sold. News, reviews, interviews, tech tips, general forum, programmers' forum, PD catalogue. DTP'd on an ST. Retains a 'user-driven' feel. Recommended. The associated ST Club runs a PD distribution service and distributes a couple of commercial programs too (Fontkit Plus, UIS III, Molgraph, CRL Virus Killer, etc.).

12 issue Subscription now:
With Disk 6 Mags Without Disk Mags

UK: #26.50 #18.00
Europe (air) #30.50 #21.00
World (air) #38.50 #31.00

Address: ST Club, 2 Broadway, Nottingham, NG7 1PS, UK.

ST World:
---

formerly the leading UK non-games mag. Became a quarterly 'buyer's guide' in Autumn 90.

ST Format:
---

all-purpose 150-page monthly, mainly aimed at young people. Lively, but of uneven quality. Big leisure section, but other areas covered too. Includes cover disk - mix of games demos and (usually out of date) PD utilities. Probably the biggest-selling UK ST mag. Has had several public rows with Atari UK.

Future Publishing, Somerton, Somerset, TA11 6TB Tel. 0458 74011
Fax 0458 74378

Atari ST User:
---

like ST Format. Generally (amongst online users) thought
to be not quite as good.

ST Action:
---

games, games and more games. And games.

Atari ST Review:

Lots of info, more mature editorial style than Format, but not so
polished. 1 cover disk per issue.

Subscriptions: PO Box 500, Leicester, LE99 0AA. Tel: 0858 410510.

There are also, I think, some MIDI mags with strong ST content. I don't
have their names.

German Mags:

ST-Magazin, TOS, and ST-Computer united in August 1993 to the
"ST Computer", which is the only remaining magazine in Germany.
(I don't know if the following info still holds, then. --Steven)

ST Computer:
---
11 issues/year, typical around 180 pages
Subscription: DM 80 (domestic), DM 100 (normal mail), DM 130 (air mail)
Address: Heim Verlag, Heidelberger Landstr. 194, D-6100 Darmstadt 13 GERMANY

French Mags:

ST Magazine

Monthly in French. Oriented towards developers, professional users. Comes
with a disk each month.
ST Magazine - 10, rue Hegesippe Moreau - 75018 Paris - France
(French Teletel users: 3615 Teletel access, code STMAG)

STart Micro

Monthly, includes a cover disk. 11 issues per year. 64 + 16 (separated) pages.
Price: FF38 per issue, subscription: FF360. Subjects: Desktop publishing,
graphics, initiations to C and GFA Basic, survey of outcoming software, music,
folders. Minitel access: 3615 code ATARI. Address: FC Press, 57 rue Danton,
92300 Levallois-Perret, France.

Dutch Mags

ST, published by Stichting ST , postbus 11129 2301 EC Leiden the Netherlands
---
cover price: fl 6,95
Independent magazine by and for atari ST users.
covers all different topics from applications to games and hardware.

60 pages.

6 times a year. One year subscription fl 35,-
black and white pages.

Atacom, by Atari Club Groningen.

Never seen this one. I suppose you have to be a member of the club or so.
price is fl 4,95.
Adress of the club: Atari Club Groningen, Postbus 9164
9703 LD Groningen, the Netherlands.

Atari Nieuws, by Atari ST computer club Nederland

News paper sized publication. Lots of colour on newspaper pages. Not too many
pages though.
price is fl 3,95 (cheap cheap)
monthly publication.
adress: ACN, Postbus 5011, 2000 CA Haarlem, the Netherlands.

GFA-info, by GFA gg (usergroup)

Publication of the GFA-basic usergroup. This group has a lot of mainly
educational software available.
price is fl 5,00

adress: GFA gg, Frankrijklaan 14, 2034 BA Haarlem, the Netherlands

ST News, by Stichting Computers Eindhoven

This is an electronic magazine. It has been around for about 6 years now
and is completely in English!!! The first issues were in Wordplus format
back in 1986 but from the 6th issue on it included a readerprogram
both for color and monochrome. Even with music.
price is fl 10,00
adress: S.C.E., Kornoeljelaan 22, 5552 RC Valkenswaard

Swiss mags:

Atari ST News Schweiz

Dutch Atari ST Nieuws translated into German for the Swiss :-)

:TIPS: 93.06.11
TIPS AND HINTS from other users
==============================

Any 'multisync' monitor which handles 70 video fields a second can be used
with the ST; the custom cable involves no tricks, or commercial ones are
available. The original NEC multisync does NOT handle 70 fields a sec.

More than 3 bombs often means more than 1 error, so interpretations are
tricky.

An ST-formatted disk which is not readable by a PC can be made readable by putting the 3 bytes EB 34 90 (those were 3 bytes of hex) at the beginning of the boot sector (sector 1 of track 0). This can be done with either an ST or PC absolute sector editor. The Desktop of TOS 1.4 and higher does this automatically.

Some (older) PC-3.5"-drives cannot deal with the short track-header produced by ST formatters. On those drives, ST-formatted disks are not readable, independent of their boot sector contents. The other way, however, does always work: format on the PC.

When using disks formatted on a PC in an ST, make sure to insert and access a disk with a different serial number in between disk changes.

For those with the 'inaccessible' mouse and joystick ports, a joystick extender cable will make life easier. The Y-cable joystick extenders make it extremely easy to keep mouse and joystick connected to port 0, and a joystick extender cable in port 1 makes for easy hookup after you've moved the machine.

BARREL is a program which can redirect printer-data to a file. It comes in handy when your printer is unavailable, and the program does not already have an option to 'print-to-a-file'. (It is available on the atari.archive server.)

DBLEFEAT is a program which can redirect disk access from, say, drive A to drive B. Handy when a program 'hard-codes' the data drive, and you wish to use your hard drive instead. (It is available on the atari.archive server.)

On the Desktop, holding the right mouse button allows you to manipulate files in other windows. This is useful for a number of reasons. An example is this: say D:\BLAH.ARC is a file you would like to extract to D:\, but ARC.TTP is on C:\. Top D:\'s window, then hold the right button while double-clicking ARC.TTP in an inactive window.

:ZNET: ??.??.??
Where can I get copies of ZNET?
==========

ZNET is now Atari Explorer Online. Please see EXPLOR for more info.

:EXPLOR: ??.??.??
Where can I get copies of Atari Explorer Online?
==========
Atari Explorer Online magazine is available on CompuServe and GEnie. You can also get copies mailed to you by sending an e-mail message to

stzmagazine-request@virginia.edu

indicating you wish to subscribe.

They won't get to you on Friday (which is when they're posted), but Greg Lindahl provides an excellent service to the networking community by sending these out.

Atari Explorer Online and some information from the Current Notes user
magazine are also available from the atari.archive server under
/atari/magazines.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st
mail server. You can also try the commercial on-line services such as
GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those
ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in
order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.)
into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st
postings. If you aren't reading these two newsgroups, you should consider
doing so. You may obtain uuencoded files as e-mail. You can obtain a
help file by mailing a message to archive-server@spud.hyperion.com, with
the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains
a multitude of Atari ST PD and shareware programs. If you don't have access
via FTP you can obtain many of the files via e-mail. You should first obtain a
help file by mailing a message to atari@atari.archive.umich.edu, with the main
body of the message being the word 'help.'. If you are from a uucp site,
please enclose this statement also 'path host1!host2!....', where
host1!host2!... is your path. Please read the help file completely before you
ask questions, and then send any you may have to jon@atari.archive.umich.edu.
Any questions about the archive or specific files go to
weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu,
jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or
weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
---

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:COMP: 93.10.02
Atari-related companies
==========

This is a (still under construction) list of companies and addresses that
might be of use to Atari ST users. Please send me addresses for the blank ones
on this list. See also IAAD, it lists many more companies that are not on
this list.

Welcome to comp.sys.atari.st
============================

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At
present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe,
TT, and Falcon. There are also emulators for the Apple Macintosh and IBM
PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented.
The newsgroup serves as a resource for Atari users ... feel free to
contribute to the discussions.
```

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:ARCS: 93.06.11
How do I deal with Archived files (.ZOO, .ARC, .LZH)?
==========

Files ending with suffixes .ZOO, .ARC, .ZIP and .LZH are archive files. They are binary files which may contain one or more other files in a compressed format. Archive files usually take up less disk space, and for this reason have become quite popular for transferring large files via modem.

In order to extract the files from an archive file, one must use an archive program. Here are the correspondences:

ZIP Use UNZIP.TTP or STZIP.PRG
ARC Use ARC.TTP
LZH Use LHARC.TTP
ZOO Use ZOO.TTP

A few hints for first-time users:

* Most archivers will give a short summary of commands if invoked with no arguments.
* If in doubt, to extract a file, copy the archiver to the directory that the file is in, and run the archiver with the arguments 'x [filename]'.
* If you have TOS 1.4 or higher, and/or a CLI, you can avoid copying the archiver by just changing the current directory to where the file is. See TIPS for a tip on how to do this from the desktop on TOS 1.4 or higher.
* Read the documentation for the archivers you use, they will almost certainly answer all your questions. Documentation is usually included in both the source and binary distributions (such as zoo21bin.zoo).

ARCHIVERS
These programs are all available via FTP from the atari.archive server, in the /atari/archivers directory. Recommended files are:

arc602.ttp - version 6.02 of ARC, includes features to archive subdirectories and also include comments with files.

arc602.arc - contains documentation. UnArc using arc602.ttp.

arc521e.arc - older version of ARC. Used mostly by those who want speed, better compression, and don't care about archiving subdirectories. UnArc using arc602.ttp.

lharc.ttp - version 2.0 of LHARC.

lzh201i.lzh - Thomas Questors lzh utility. German documentation. UnArc using lharc.ttp

stzip22.lzh - STZip, with GUI interface

unzip41.lzh - Old version of unzip

zoo21.ttp - version 2.1 of ZOO

zoo21bin.zoo - ZOO archive includes documentation. UnArc using
zoo21.ttp.

:MSA: 93.06.11
Some info on Magic Shadow Archiver
==================================
(This was provided by Chris Herborth)

MSA Archives

The Magic Shadow Archiver (MSA) is a disk archiving program that allows an entire disk to be compressed into one file for transmission. The Magic Shadow Archiver (in shadow.[arc?|lzh?|zoo?] on atari.archive.umich.edu in ~/Archivers) creates .MSA files, which are often compressed using a normal archiver, such as zoo or lharc.

Magic Shadow is notoriously bad when used on a 1/2 meg ST and only one floppy drive. Its disk access and memory use are very badly thought out, and could result in over 160 disk swaps when unpacking an 80 track, double-sided disk.

Due to the fact that it was the _only_ disk image archiver around for quite a long time, Magic Shadow is the de-facto standard for creating disk images of computer demos and other pieces of software that cannot be easily compressed as files.

Because MSA files are disk images, they can only be used to recreate a floppy disk. There is (currently, see below) no way to extract the files from an MSA archive without writing it to a floppy disk.

Magic Shadow works perfectly with any legal TOS floppy format, even high density disks found in modified STs and most MegaSTes and TTs.

Chris Herborth (herborth@pinot.waterloo.ncr.com at work,
cherborth@semprini.tdkcs.waterloo.on.ca at home,
C.HERBORTH on GEnie) is writing a much more efficient MSA extractor, called UnMSA. UnMSA will minimize the number of disk swaps, and speed decompression considerably.

Daryl Richards (no email address, yet) is working on an MSA-Mounter, which will allow someone to unpack an MSA archive to RAM or a file on a hard disk. This uncompressed disk image will then be added to the system as a logical drive (much the same way a RAMdisk adds a drive to the system). MountImage on the Mac is an example of the way MSA-Mounter will eventually work (MountImage is so good, you can install new versions of the Mac OS using floppy disk images stored on your hard drive).

There is yet another MSA archiver now, called MSA II, by Phillip Lang.

:CLI: ??.??.??
What Command Line Interpreters are available?
==========

There are a large number of Command Line Interpreters for the Atari ST.
Some of the more popular ones include:

gulam the 'classic' cli, somewhat UNIX in flavor

BASH GNU Bourne Again Shell

ksh Korn Shell - available under MINT

gemini MUPFEL is the shell used by the gemini environment

master MS-DOS/Unix mixture, shareware.

okami a German shell with many useful utilities built in

pcommand an MS-DOS-like shell

csh C-shell, standard on Unix

tcsh Enchanced C-shell - available under MiNT

Check atari.archive under /atari/cli or /atari/mint, or check one of the
other FTP sites for files.

:ERR: ??.??.??
What does TOS ERROR nn mean?
What do the bombs on my screen mean?
==========

The information below was written, in part, by Darryl May, and posted on
GEnie in January (of ????) by John Townsend. The original also appeared in
the June 1988 issue of _Current Notes_ (122 N. Johnson Rd., Sterling, VA
22170). It has since found its way to me, and is being posted to
comp.sys.atari.st as a service to readers.

Alan Pratt wrote to tell me that the basic information may be correct, but
that it cannot be dubbed "official" unless it originates, on paper, from
Atari. This makes sense, as electronic communications are easily
modified, even accidentally.

Roland Waldi provided information regarding the difference between TOS and
GEM return codes which appears to be correct. The tables have been modified
to reflect his information.

The following is an unofficial list of the errors that can appear
while you are operating your ST computer.

Error description return code alert box #
==========
OK (no error).....0
Fundamental error.....-1
Drive not ready.....-2
Unknown command.....-3

```
CRC error.....................-4
Bad request...................-5
Seek error....................-6
Unknown media.................-7
Sector not found..............-8
No paper......................-9
Write fault..................-10
Read fault...................-11
General error................-12
Write protect................-13
Media change................-14
Unknown device..............-15
Bad sectors on format.......-16
Insert other disk............-17
Invalid function number.....-32.....1
File not found..............-33.....2
Path not found..............-34.....3
No handles left.............-35.....4
Access denied...............-36.....5
Invalid handle..............-37.....6
Insufficient memory.........-39.....8
Invalid memory block address...-40.....9
Invalid drive specified.....-46....15

No more files...............-49....18
Range error.................-64....33
Internal error..............-65....34
Invalid program load format....-66....35

The last code is the infamous "TOS error 35"!

Also, some unofficial information via Alan Pratt:

Notably, you should add -48: ENSAME (not the same drive, occurs when
you call Frename and the two names you give aren't on the same drive),
and -67: EGSBF: you can't use Mshrink to GROW a block of memory.

Those bombs that appear on your screen are error messages from
the 68000 micro-processor.

Number
Description of bombs

User Interrupt Vectors......64-255
```

:GDOS: 93.05.05
What is GDOS, and where can I get it?
==========

GDOS stands for Graphic Device Output System (at least that's what my copy of STart, volume 1 number 1 said...)

There is a newer version, called SpeedoGDOS, which should be available commercially from Atari. It is currently included with AtariWorks, and some Falcon packages. SpeedoGDOS uses scaleable fonts - you do not need to create a font file for every point size. There are desk accessories which allow you to manipulate available fonts, and also CPX programs for the newer Atari Control Panel. For those who only have limited memory, a newer version of GDOS is also included with the distribution. For those with investments in older bit-mapped GDOS fonts, they may be used with the new version of GDOS or used as bit-mapped (ie. non-scaleable) fonts within SpeedoGDOS.

You can get a copy of "Everything You Ever Wanted to Know About GDOS (and more)" by Douglas N. Wheeler from the atari.archive server. The file is /atari/programming/gdos.arc.

There is a German version of GDOS available from the atari.archive server. The file is /atari/utilities/amcgdos.arc.

Currently, there are no truly public domain sources for the GDOS system files or font files (at least those supplied by Atari). You can get these files with many commercial programs, such as Degas Elite, WordFlair, etc. You might also want to check your local user group to see if they received a copy of the WordFlair demo program (also available on GEnie). The demo program appears to have the GDOS system and font files.

In the UK The ST Club (2 Broadway, Nottingham, UK NG1 1PS. Tel 0602 410241, Fax 0602 241515) is a licensed GDOS distrubutor:

Catalogue No's:
GDOS-A Driver + Fonts 9-pin
GDOS-B Driver + Fonts 24-pin
GDOS-C Installed system for Opus (9 pin)
GDOS-D Opus 24-pin
GDOS-E FontGDOS + drivers
GDOS-F 300dpi printer fonts

Disks 2.95 pounds each.

:GNU: 93.06.11
What GNU software is available for the ST?
==========

The Free Software Foundation C compiler, commonly known as GNU C (or gcc) is avaiable for the Atari ST. The minimal memory required to do any useful (i.e. beyond 'hello world') programming is 2 megabytes. A 4 megabyte system is recommended.

There is an extensive archive of the latest GNU C programs via anonymous FTP on atari.archive. GNU C is also available at most European FTP sites. The latest version of GCC available for the ST is 2.4.2, this version includes built-in support for C++.

Note that most GNU documentation comes in TeXinfo format. Documentation in this format can be fed into TeX for printing. It can also be processed by Emacs' texinfo to make an info file, which can be viewed on-screen with Emacs' info mode. These two functions can also be performed by the standalone programs 'texinfo' and 'info' (on atari.archive as /atari/tex/tnxf241b.zoo).

The following can be found in the /atari/gnustuff/tos directory of atari.archive: (Note: all of these have Unixmode and MiNT support)

BASH Bourne-again shell
BISON Yet another YACC (Yet Another Compiler Compiler)
COMPRESS Compatible with Unix compress
DIFF Compares files; PATCH does the inverse
EMACS Extreme editor :-)
Fileutils Unix file utilities
FLEX Lexical analyzer, like Unix lex
GAWK AWK report generation language
GCC 2.4.2 C, C++ compiler
GDB GNU debugger, with source level C support
Ghostscript Postscript clone
GROFF Text formatting system
GREP Regular expression search, like Unix grep
MAKE Like Unix make
MAKEINFO Stand-alone system to process .info files
PATCH Changes files from diffs; DIFF does the inverse
PROF Profiles executable code
RCS Revision Control System

SED Stream editor
Smalltalk Smalltalk; object oriented language
TAR Tape archiver like Unix tar

:HAM: ??.??.??
Where can I find Ham Radio software for the ST?
==========

Plenty of Ham Radio software is available for the Atari ST:

Morse code
Radio Teletype (RTTY)
Packet Radio (W0RLI BBS and K9AQ TCP/IP)
Satellite Tracking
WEFAX
Color Slow Scan TV (SSTV)
etc.

For more information contact the Atari Microcomputer Network:

Newsletter Editor - Gil Frederick, VE4AG
130 Maureen Street
Winnipeg, Manitoba
R3K 1M2 Canada
or
Program Librarian - John Adams, KC5FW
17106 Happy Hollow
San Antonio, TX 78232
U.S.A.
or
Tune into the weekly net Sundays 16:00 UTC on 14.325 MHz.

73,
John Langner, WB2OSZ

:LANG: 93.10.18
Public Domain/Shareware languages...
==========
(This section is getting an overhaul, but I don't have the time to finish
the overhaul right now... Sorry, check back next month.)

There are a large number of programming languages available for use with the
Atari ST. Programmers seem to flock to the Atari ST, and if you know of a
language, you can probably find it, or an equivalent, for the ST.

68000 assembler/disassemblers: a68, turboass,
abc
APL
AWK
BASIC
C
C++
cross assemblers (z80, 6502, 68xx,8031/80xx)

Elan
FORTRAN
FORTH
FP
Hope
ICON
LISP
Little Smalltalk
Modula2
OPS5
perl
PROLOG
SCHEME
SIOD
Smalltalk
XLisp
XProlog
XScheme

Check the atari.archive server under /atari/languages. Most other archive sites will have a language directory which you can also check.

:MINIX: ??.??.??
Is MINIX available on the Atari ST?
==========

MINIX is a UNIX-like operating system for the IBM PC, XT, AT, 386, and PS/2, as well as the Apple Macintosh, Commodore Amiga, Atari ST, and later in 1991, Sun SPARC. It is available with all the source code for the entire operating system, the libraries, and nearly 200 UNIX-like utilities.

Demonstration disks for the IBM PC line and Atari ST are available for free via anonymous FTP for people on the Internet. A Macintosh version will be online soon. (If you can't wait, see below.)

To get a free demo disk and the manual, use ftp to connect to ftp.cs.vu.nl (192.31.231.42) and look in pub/minix/demo. The READ_ME file describes the contents of the directory and how to use it. Be sure to fetch and read this first. It contains important information.

If you don't have FTP access, you can buy the demo disk package from Prentice-Hall for $10 by calling (201) 767-5969 or FAX (201) 767-5625. Please DON'T ask me to send it by email. I have quite enough work already thank you. The ordering numbers for Prentice-Hall are:

- MINIX 1.5 IBM demo disk (0-13-582768-x) (in stock now)
- MINIX 1.5 Atari demo disk (0-13-582792-2) (in stock now)
- MINIX 1.5 Macintosh demo disk (0-13-582784-1) (in stock now)

Please note that although the demo disks are available for free on line, MINIX itself is copyrighted software and is not available on line. The demo disks are also copyrighted, but permission is hereby granted to

upload and use them for evaluation purposes. The READ_ME file tells how
MINIX can be ordered.

AS A COURTESY TO US, PLEASE DO NOT FTP DURING BUSINESS HOURS (EUROPEAN
TIME). PLEASE FTP AFTER 11 A.M. EASTERN STANDARD TIME.
If you want to follow the MINIX discussion, read the comp.os.minix
newsgroup, which is quite active and has almost 50,000 subscribers.

Have fun!

Andy Tanenbaum (ast@cs.vu.nl)

:MINT: ??.??.??
What is MiNT?
=============
MiNT is a free multitasking operating system extension for TOS. It is somewhat
like BSD Unix from the programmer's perspective. MiNT can run up to 1 GEM
program along with a lot of character-based programs simultaneously. MGR
and MW2 can both put multiple terminal windows on screen, and bgacc can
put a number of terminal windows on a GEM screen. MiNT and lots of stuff to go
with it can be found at atari.archive.umich.edu:/atari/mint.

TOSWIN is the new replacement for bgacc: it provides lots of nice features like
variable fonts, menus, selectable window gadgets, etc. GEMTERM is a similar
package (it's not part of the standard MiNT distribution) modelled after TOSWIN
and XTerm.

A somewhat interesting note: MiNT is now the kernel of Atari's multitasking
OS, MultiTOS. Originially MiNT stood for 'MiNT is Not TOS', but it's now
'MiNT is Now TOS'. :-)

:XWIN: 93.03.01
Is there a version of XWindows for the ST?
==

There actually is a port of XWindows to the ST now, although it is pricey.
Here's the (slightly hacked up) announcement for it:

X/TOS/window/server and X/TOS/window/server/color

Vendor:
X/software Michael Gehret
X/TOS division
Marktstrasse 8
W-8944 Groenenbach
Germany
TEL: +49 8334 1411
FAX: +49 8334 6245
email: xtosinfo@xsoft.uucp
CPU:
Atari Mega ST, STE, TT
68000 to 68040
Memory:

2 Mbytes (4 Mbytes recommended)
Operating System:
TOS 1.4 or higher
Mouse:
Atari mouse
Graphics:
X/TOS/window/server:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
X/TOS/window/server/color:
monochrome 640x400x1,
monochrome 1280x960x1 (TT, SM194)
color 320x200x4
color 640x200x2
color 640x480x4
color 320x480x8
Ethernet Card:
Atari Card (Mega or VME bus)
Riebl/Wacker (Mega or VME bus)
Biodata BioNet 100 II (DMA port or VME bus)
Network Software:
Atari/Riebl/Wacker ANS TCP/IP
Biodata TCP/IP
Disk Space:
none (two floppy disks, may load fonts from second disk or font server)
Features:
full X11 Release 5 implementation
Shape, Multi-Buffering, MIT-SUNDRY-NONSTANDARD extensions
PEX extension optional
support of font server protocol
support of X Display Manager Protocol
access control support
compatible to OSF/Motif and OpenLook
high performance (more than 32,000 Xstones on TT)
fast cursor tracking
backing store and save unders support
size of virtual screen limited by memory only, automatic panning
X/TOS/window/server/color supports all video modes at the same time,
including dynamic visuals
loadable key maps (xmodmap format), full support for European keyboard
layouts
3-button mouse emulation with Atari 2-button mouse
may run parallel to GEM (switching with hot key), configurable multi
tasking priorities
about 50 fonts supplied

:DEMOS: ??.??.??
Why won't demo x run on my machine?
==========

90% of the time, if a demo does not run on your American ST, you probably need to be in 50Hz mode to use it. Get a program like 50hzboot.prg from atari.archive to allow this.

:PAINT: ??.??.??
What is the format for [x] paint program data?
==========

There is a periodic posting of ST Picture Formats, edited by David Baggett. The file is on the atari.archive server under /atari/graphics/picfmts.doc.

:PD: 93.06.11
Where can I get Public Domain/Shareware software?
==========

There are FTP sources and a comp.sources.atari.st/comp.binaries.atari.st mail server. You can also try the commercial on-line services such as GEnie, CompuServe, Delphi and Bix.

Using FTP, most files should be retrieved in BINARY format (at least those ending with the suffix of .ZIP, .ARC, .LZH, .ZOO, .PRG, .TTP, .TOS)

Mail servers encode files. You will need a program called 'uudecode' in order to change files ending with the suffix .UUE (or .UAB, .UAC, etc.) into their original form.

:MAIL: ??.??.??
E-Mail file servers

archive-server@spud.hyperion.com:

Spud holds all of the comp.sources.atari.st / comp.binaries.atari.st postings. If you aren't reading these two newsgroups, you should consider doing so. You may obtain uuencoded files as e-mail. You can obtain a help file by mailing a message to archive-server@spud.hyperion.com, with the main body of the message being the word 'help'.

atari@atari.archive.umich.edu:

The atari.archive server is mentioned many times in this article. It contains a multitude of Atari ST PD and shareware programs. If you don't have access via FTP you can obtain many of the files via e-mail. You should first obtain a help file by mailing a message to atari@atari.archive.umich.edu, with the main body of the message being the word 'help.'. If you are from a uucp site, please enclose this statement also 'path host1!host2!....', where host1!host2!... is your path. Please read the help file completely before you ask questions, and then send any you may have to jon@atari.archive.umich.edu. Any questions about the archive or specific files go to weiner@atari.archive.umich.edu (or weiner@terminator.rs.itd.umich.edu, jeff.weiner@um.cc.umich.edu, weiner@zircon.labmed.umn.edu, or weiner@umnstat.stat.umn.edu :-)

archive-server@micros.hensa.uk.ac:

This is a UK public domain archive, available to sites within the UK via
via JANET.

info-server@Germany.EU.net:

This is a german public domain archive. This only has comp.binaries.atari.st
and comp.sources.atari.st.

archive-server@Germany.EU.net:

Same place as above, but this one carries other software than just
comp.binaries.atari.st and comp.sources.atari.st.

mail-server@cs.ruu.nl (or uunet!mcsun!hp4nl!ruuinf!mail-server):
---
send the following message

begin
path john@highbrow.edu (PLEASE SUBSTITUTE *YOUR* ADDRESS)
send ATARI-ST/index
end

NOTE: *** PLEASE USE VALID INTERNET ADDRESSES IF POSSIBLE. DO NOT USE
ADDRESSES WITH ! and @ MIXED !!!! BITNETTERS USE USER@HOST.BITNET ***

The path command can be deleted if we receive a valid from address in your
message. If this is the first time you use our mail server, we suggest you
first issue the request:
send HELP

LISTSERV@UOGUELPH.BITNET:

Mail messages with the contents HELP will bring you some usage information
and GET PROG-A16 FILELIST will provide you with a list of files. Subscriptions
to INFO-A16 are also available on this server. INFO-A16 is a digest of
messages from comp.sys.atari.st.

:FTP: 93.05.05
Anonymous FTP servers

Note: The generally accepted practice for FTP use is as follows:

1. Limit access times to non-working hours. This is usually 6-8 pm
to 8-9 am LOCAL time. LOCAL time means local to the computer
you are accessing! For example, 4 P.M. in Minneapolis, Minnesota
is 10 P.M. in England, and 10 A.M. in Germany is 4 A.M. in New
York.

2. Once you connect, issue the following commands at your FTP
prompt:

user anonymous
<YOUR e-mail address should be entered at the Password: prompt)
ls
cd <to the appropriate directory>

3. Limit downloads, especially across the ocean. Remember, there are
other people who are using the same lines as you.

Atari FTP sites (the list is -not- exhaustive)
----

atari.archive.umich.edu [141.211.164.8]

uk.ac.lancs.pdsoft (available to UK users via JANET)

Note: Access is a bit different for this archive site, use the following:

user pdsoft
pdsoft (at the Password prompt)

ftp.Germany.EU.net [192.76.144.75]

ftp.cs.ruu.nl [131.211.80.17]

src.doc.ic.ac.uk

This site has a mirror of atari.archive.umich.edu in /computing/systems/
atari/umich.

:TEX: ??.??.??
Is TeX/LaTeX available on the Atari ST?
==========

The TeX/LaTeX typesetting programs are available on the Atari ST. Check the
atari.archive server under /atari/tex. Fonts and device drivers
(including one for the Epson 9-pin printers) are available on the
atari.archive server.

The latest version of TeX (3.14) has recently been made available on the
atari.archive server. The files are in a subdirectory of their own.

Graham Higgins recently wrote a message in comp.sys.atari.st indicating the
minimum files needed to get a working TeX/LaTeX system up and running on the
Atari ST. He said:

You'll need, at minimum:

The binaries for LaTeX/TeX :StTeXBin
The style files :StTeXSty
The font macros :StTeXTfm

If you want to screen-preview, you'll need screen font files (showdvi)
If you want to print locally, you'll need printer font files (dvifont)

Allow 5Mb.

For a step-by-step article on setting up Tex and LaTeX, send an e-mail request to davidli@simvax.labmed.umn.edu. Be sure to mention 'tex.setup'.

There is also a complete, ready-to-install distribution called CS-TeX. The latest version, 4.0, is available at atari.archive: /atari/tex/cs-tex-4.0. This consists of 8 disks full of TeX stuff, plus an installation program that takes care of the details for you.

==========

Hope you liked the comp.sys.atari.st FAQ. If you have comments, suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for compiling most of this FAQ.

Welcome to comp.sys.atari.st
==========

This newsgroup is devoted to discussion about 16 and 32 bit Atari micros. At present that includes the Atari 520ST, 1040ST, Mega ST, STe, STacy, Mega STe, TT, and Falcon. There are also emulators for the Apple Macintosh and IBM PC/XT/AT available.

Most of the people who read this newsgroup are technically oriented. The newsgroup serves as a resource for Atari users ... feel free to contribute to the discussions.

Associated newsgroups include:

comp.binaries.atari.st ! uuencoded binary programs
comp.sys.atari.st.tech ! technical programming/hardware topics
comp.sources.atari.st ! uuencoded/shar sources

:MODELS: 93.01.30
All the models in the ST line
==========

This is a pretty complete list of all the ST/TT models and their main features. If you have any additions/correction, of course, send them to me.

Feature key:
CPU's:
8 8 MHz 68000
16 16 MHz 68000
16/3 16 MHz 68030
32/3 32 MHz 68030

RAM:
/1 128kB
/5 512kB
1 1MB
2 2MB
4 4MB
S SIMM slots for expansion

Built-in:
F Floppy
M TV modulator

Extra:
AV 8 bit digital stereo audio, 4096 colors, hardware scrolling, analog joystick ports
MB MegaBus processor-direct bus slots
6U 6U VME bus slots, second serial port
FC Motorola 56000 DSP, 16 bit stereo audio, much enhanced video

TOS:
Highest built-in TOS

Models:
Name CPU RAM TOS B.I. Extra Comment

:FALCON: ??.??.??
What are the specs on the Falcon?
==========

Here's some stuff I culled from the (reposted) Delphi conference with Sam Tramiel.

--- Start Quoted material ---
Here's the specs on the Atari Falcon 030:

CPU: Motorola 68030 running at 16 Mhz
32-bit Bus
Optional 68881 or 68882 FPU
RAM: 1,4, or 14 megs
Standard Atari Cartridge Port
Motorola 56001 DSP chip

Expansion Bus:

Internal direct processor slot for 386SX PC emulation, or other coprocessor

Graphics:

Super VGA graphics: 640x480 with 256 colors
True color 16 bit mode allowing a display of up to 65,536 colors
Accepts external video sync signal to allow high quality genlocking
Overlay mode for easy video titling and special effects
Overscan on TV's and ST Color monitors
262,144 possible colors
hardware-assisted horizontal fine scrolling
BLiTTER graphics co-processor

Sound features:

Eight 16 bit audio DMA record and playback channels
Stereo 16 bit digital DMA input
Stereo 16 bit DMA audio output
SDMA sound/DMA Coprocessor

Standard Ports

SCSI II port with DMA
High speed LocalTalk compatible LAN
Connector for analog RGB color (ST or VGA) or composite video
RS232C serial port
Bidirectional parallel port
MIDI IN/MIDI OUT
Stereo microphone input, miniature stereo plug
Stereo audio out, miniature stereo plug
Two joystick connectors
Two enhanced digital/analog controller/light pen connectors

Data Storage

1.44 Mbyte floppy disk drive
Optional internal IDE Hard Disk

System software

Pre-emptive Multitasking with adaptive prioritzation (MultiTOS)
Inter process communication
NewDesk desktop and eXtensible control panel
Multiple window user interface; number of windows limited
only by memory or software in use.
--- End Quoted Material ---

:ACCEL: ??.??.??
Hardware Accelerators
=====================
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

68000 based: ICD adspeed ST/STe
Fast Tech Turbo T-16 (16MHz)
T-20 (20MHz)
T-25 (25MHz)
68030 based: Gadget by Small SST (16MHz to 40MHz user changeable, 8 SIMM slot
68882 FPU socket, 1 expansion slot, TOS 2.0x).
Fast Tech : Tiny Turbo
Full size version

:TAPE: 93.08.11
Can I use a SCSI tape drive?
============================

Yes, just about any SCSI tape drive should be useable on the ST line. (Of
course, if your computer doesn't already have a SCSI port, you'll need a SCSI
host adapter.) There are at least two freeware/shareware programs that can
help you back up your HD to SCSI tape: TapeBIOS and GEMAR (a German GEM
ARchiver)

:DRIVES: ??.??.??
What should I know about hard drives and the ST?
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

To get a hard drive for ST, STe, Mega, Mega STe or TT(using DMA port):
1. Host adapter (convert the ST's DMA to SCSI standard):
ICD, Supra, BMS are the three major manufature. ICD has very good
software updating support and updates very often.
2. SCSI hard drive or MFM/RLL drive with SCSI adapter:
i). SCSI drive:
Like Quantum Pro80LPS, Seagate ST-xxxN series, they have a 50 pins IDC
connector, and usually say SCSI hard drive or Mac drive. (Any Mac except
Mac128, Mac512, FatMac has SCSI built in, so a drive that works with Mac
usually has SCSI interface).
No other adapter needed, just connect to the host adapter in 1.

ii). MFM/RLL drive:
These types of drive is older and used in older IBM machines. To use
them you need an adapter to convert them to SCSI. Adaptec 4000/4000A
is for MFM, 4070 for RLL drive, Emulex and OMTI also has similar cards
availible. Adaptec has stopped production for quite sometime so look for
these in used/liquidation place. (usually goes $40 to $75 each).

Connect the drive to the adapter (said Adaptec 4000) then connect the
adapter to the host adapter. (said ICD). It looks like following:

```
-------------- ----------- ------------ ----------
| MFM drive |------->|ACB 4000 |------>| ICD |------>| ST DMA |
-------------- ----------- ------------ ----------
```

3. Case, power supply and cabels for the drive system:
Unless you have Mega, Mega STe, TT and the drive is 3.5" so you will put
the drive internally, you will need a case with power supply to house the
adapter and hard drive. IBM case is very easy to get and has a lot of space
for expansion.
For older drive you need about 40 watts each drive, for newer 3.5" drive
they use about 20 watts or less, Quantum LPS drive use about 10 watts each,
make sure your power supply has more than the drives need. Again if you
use IBM case, the 150 watts power supply for that type case can drive at
least 3 drives without problwm.
Cables: DMA cable usually comes with the host adapter.
power cable from power supply to drive usually comes with power sup
SCSI cable from host adapter to SCSI drive or adapter(for MFM/RLL),
it's 50pins IDC female connector on each end with 50 conductors
cable. Should be availible at place you get the drive.
For MFM/RLL drive you will need the usual MFM/RLL drive cable:
(a 34 conductors cable and a 20pins connector, again should be
available at the place you get the drive).

Now, connect them all together. Before power up, check the connection again.
And check the jumper setting on the drive (consult the drive's manual). If you
are using more than one drive with the system, make sure only the last drive
has the terminator (either a DIP or a signle inline package of resistor, which
usually is socketed and close to the SCSI connector on the drive circle board.
Remove the terminator from other drives. [only the last drive should have the
terminator]

Software usually comes with the host adapter, or you can FTP atari's AHDX5
from ftp sites.

:FLOPPY: 93.08.11
Can I use 1.44 meg floppy disks and Flopticals?
==========

1.4 megabyte floppy drives will soon be available from Atari for MegaSTe
and TT machines. If you own an older Atari ST, there is a company which offers
a $199 kit (including floppy) to install and use the drive.

Note that Tos versions prior to 2.05 will not format a 1.4 meg floppy from the
desktop.

Floptical drives (floppys that use optical tracking to get 21MB on a 3.5" disk)
can also be used through a SCSI port. ICD's newer host adapter software (the
'PRO' version) will handle them.

:GRAPHIC: ??.??.??
How can I enjoy enhanced graphics on my ST?
==========

For stock STs, JRI makes a chip which allows a 4096 color palette.
There is also a public domain enhancement that allows 32768 colors on
older STs. This can be found as 32kcolor.lzh on some archives.

There are a number of graphics boards on the market. Here is a first pass
at listing some of them. The information is based on postings by Ben Gilbert
and Jari Lehto.

C32 board by Matrix Datensystem (Germany)
* 800x608, 256 colors
* all ST/TT models
* 256k, 512k and 1meg versions

C75Z board by Matrix Datensystem (Germany)
* 1024x768, 256 colors
* Mega ST or STe, TT VME Buss

(Matrix GmbH has over 15, maybe over 20 with all versions, different
graphics boards available, from hobbyist to professional, from CAD
to GenLock and digitizing.)

ISAC board by Dover Research Company (U.S.)
* 1024x768, 16 colors from palette of 4096
* makes hi-res look like ST low res, just with a huge window
* Mega ST buss
* Dover Research Co. (612) 492-3913

The Imagine by Wittich Computer GmbH (Germany)
* 1024x768, 256 colors
* Mega ST only

(Versions available for all ST/TT models. Several possible resolutions.
Reasonable price, but slow and not very compatible..)

Crazy Dots by TKR (Germany)
* 1024x768, 256 colors
* Mega ST only

(1280x800, 256 colors out of 16.7 million color palette. 1664x1200 for
both 16 color and monochrome. True color option available. Mega ST,
Mega STe and TT.)

reSOLUTION SuperVGA by GengTec (Germany)
* 8 resolutions, 320x200 through 1600x1200
* 16 colors without driver, 256 out of 256,000 with driver
* 1 mb RAM
* uses a standard VGA monitor
* Mega ST or regular ST
* available in U.S. from Rio Datel, 1-800-782-9110, (702) 454-700

(1024x768 is the highest resolution with 256 colors. Driver is called
Multicolor VGA option. Compatible with NVDI and Blitter. Multisync
monitor recommended.)

AlberTT
* like ISAC card, but specific for TT VME buss

MegaScreen
* 832x624 monochrome
* connects to MegaBus
* works with Spectre

Reflex
*1024x1024 with SM124 monitor
*2048x2048 possible with expansion
*usable with most big-screen displays

ODIN by Marvin AG (Switzerland)
* external expansion
* gives TT-resolutions to a regular ST

Cyrel
* RISC-based card
* extremely costly

Here's a few more cards, available from OverScan GbR, Saentisstrasse 166,
1000 Berlin 48, West Germany, ++49 30 721 94 66, ++49 30 721 56 92 (FAX),
++49 30 727 05 6 (Mailbox, language: German)

Autoswitch OverScan for the ST (NO STE compatibility) is DM 129.--, you
don't have to buy a new monitor. The maximum resolution on a SM 124
is variable, but in most cases at about 732*480.
AutoSwitch OverScan TT is a VME board. It's about 249.-- DM, you also can use
your old monitor, but it only works in the TTs five color modes
(3 ST-compatible modes, 2 TT-modes). Resolutions are variable, ask
OverScan about the values for your monitor.
Falcon ScreenBlaster blows up your Falcons resolution to a maximum of nearly
900*600 on SVGA-monitors. It'll be shipping as soon as Falcon030s

become available, and the pricing will be near 150.-- DM.

Graphics cards for which information is sought:

OmniChrome board by Omnimon Peripherals

JRI GenLock

Atari/Lexicor 24 bit color card

Jari Lehto proposed the following recommendations:

Low budget SVGA - reSOLUTION
Professional high-end use Cyrel (or is it Cyrix?)
Hobby or semi-pro DTP Reflex
Hobby DTP MegaScreen
To obtain TT resolution ODIN

:KEY: 93.09.02
A few keyboard questions
========================

Here's how to connect a MegaST-keyboard to a 1040ST:
It's taken from the "ST-Computer" October '90 ('Quick-Tips')

Picture 1

Mega ST-Keyboard cable
(seen from outside)

```
It's no problem to connect * 1
the MegaST keyboard to the ____________ o
smaller computers 520St and ___| | * 3
1040ST. To do that, you only | 6 * | * 4
have to get a 6-pin western | 5 * | * 5
connector plug to be connec- | 4 * | * 6
ted to the keyboard. (available | 3 * | * 7
in Electronic shops) After that | 2 * | * 8
four cables must be connected | 1 * |
with the 'Pfostereihe' (the |___ | 1040ST
plug inside the 1040ST) where |____________| Keyboard-Plug
normally the dazzy original-keyboard
is plugged in. The exact connection Picture 3
is shown on picture 2 and 3
```

Eickmann Computer, Franktfurt

```
* * * * * * * * * * * * * * * o *
18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 1
```

Picture 2 520 ST Keyboard plug (not for You, Jeff)

Picture 3 (Meg to 1040ST) Picture 2 (Meg to 520ST)
MegST MegST
keyboard cable <--> 1040ST plug keyboard <--> 520ST plug

```
6 <--|----> 8 6 <--|----> 1
| |
5 <--| 5 <--|

4 <-------> 5 4 <-------> 14
3 <-------> 6 3 <-------> 15

2 <--|----> 4 2 <--|----> 13
| |
1 <--| 1 <--|
```

****
And now for No.2
****

If you remove the keyboard from the Mega ST and switch on the computer,
the computer won't boot up and send you a series of 'Alert-Beeps'.
If YOU want to let your Mega ST run without a keyboard (FAX-Server a.s.o.)
simply connect a restistor to the keyboard-plug in the Meg and at once
there's silence and he'll do his job!
(Freely translated from Eickmann-Computer by me)

```
6 * 10kj resistor
5 * _____
4 *----|_____|--
3 * |
2 *-------------+
1 *-------------|
```

Mega ST keyboard-plug
(inside-view)

****
And here's another one: This one's about the Hardcopy-function of the ST's
****

Do you hate it - after pressing <Alternate>+<Help> the same time - when
you don't have a printer connected to the parallel port of your ST and
must wait a long time to work again because of the long break taking the
computer to realize that there's no printer connected?
Well, do this and forget about it:

connect the following pins of the printer port of your computer (better:
create a Sub-D 25pin-male-plug an connect the pins on the soldering side):

pin 13 connected to 14 and 15 (all across the plug)
pin 1 connected to 10
pin 23 connected to 11 and 12

****

:JOY: ??.??.??
What joysticks work best with the Atari ST?

The Atari ST works with joysticks with a 'standard' D-Socket. IBM-style
joysticks, Apple joysticks, and Nintendo joysticks will -not- work.

Some recommended joysticks:

Konix Navigator - "best .. if you want to use it for any length of
time"
Gravis - "responsive ... great for games like MidiMaze"
WICO - "strong reed switches, hard plastic and metal components"
Atari - "FAR more controllable and responsive than other, more durable
units"

:MODEM: ??.??.??
What modems work with the Atari ST?

Any external modem should work fine with the Atari ST-series of computers. You will need to purchase or build an RS-232 cable. Be sure the cable is capable of establishing DTR with your modem, as many telecommunications packages check the status of the DTR line. (Ask your local hardware guru if you don't know what DTR is...)

The ST can connect to modems at up to 19,200 baud. Practically, you will purchase either a 2400-baud or 9600-baud modem. The cost of 2400-baud modems has dropped so much in the past few years that you should not even consider a slower modem. Believe me, modem speeds under 2400-baud are going to seem SLOOOOOOW to you!

You will probably need a serial port patch program to use high speed modems on your ST; most versions of TOS have a bug in CTS/RTS handling.

:MONITOR: ??.??.??
What should I know about monitors and the ST?

The monitor is your connection to the ST. Without a monitor, you're typing blind. (Unless, of course, you have an RF modulator on your ST and attach it to your TV set. This is discouraged, as the bandwidth and resolution are pretty terrible for anything other than arcade games.)

There are three monitor choices for those of us owning Atari ST/STe equipment:

1. Monochrome monitors - these include the venerable SM124, one of the sharpest monochrome monitors on the market. Street price is about $150, used monitors should run around $80-90. You can also purchase a 19" monochrome monitor. This gives you a 'big screen' to play around in, and is best for work with DTP and CAD systems. The price is a bit high at $1500+, and you'll need a plug-in board, which is generally set up for the Mega ST machine.

2. Color monitors - including the SC1224 in all of its incarnations (JVC and Goldstar being the primary vendors). The newer monitor, the SC1435, has a 14" screen and stereo sound.

3. Multisync monitors - these monitors provide monochrome and color access in one monitor. The street price is around $450, about $100 more than a standard Atari color monitor. You need to reset your computer to change resolutions. In many cases, a nice little switch box is provided (or you can build one) which does this for you. Examples of multisync monitors include the OMNIMON RAINBOW MONITOR.

There are any number of monitor choices for those owning Atari TT equipment, although they all boil down to 'multisync VGA'. There 14" color VGA monitor from Atari is quite nice, as is the 19" monochrome monitor. Any standard 14" multisync VGA monitor will do as well. Forget moving your SM124 or SC1224 monitor to your new system, the cabling and electronics is just not going to work.

:PCEM: ??.??.??
How can I turn my Atari ST into a PC emulator?
==========
(Thanks to Shoou-yu Tang sytang@lamar.colostate.edu for this info.)

Supercharger is the only external PC emulator with 8MHz V30 and 1MB RAM in a nice lunch box. It connects to ST's DMA port and defaults as device 3. It's powered by external power supply. Has 8087 socket and one expansion slot. The 1MB RAM can be used as RAM drive by ST when the IBM side not used.

:SPECTRE: ??.??.??
How can I turn my Atari ST into a Macintosh emulator?
==========
(Thanks to Wayne (trek@ihlpb.att.com) for this info.)

Product: Spectre GCR from Gadgets by Small, Inc
40 W. Littleton Blvd
#210-211
Littleton, CO 80120
Retail: $299.95

Description:
The Spectre GCR is a combination of software and hardware that allows the Atari Mega/ST/STe/TT line of computers to emulate an Apple MacIntosh Plus(tm) Computer. The emulation is so good that most Apple software runs out of the package using your Atari Disk drives to read in the Mac software. It does all of this while running 20% faster than the program would on a MacIntosh Plus and provides you a 30% larger screen area.

The Spectre GCR is a combination of software (written by Gadgets by Small, Inc), a cartridge (also from Gadgets), and a pair of 128K Apple ROMs (from either a MAC 512kE(tm) or Mac Plus - part numbers 342-0341 and 342-0342 which you purchase separately from an Apple source.) The Apple ROMs can currently be purchased for around $150. MacIntosh documentation and software, including the operating system (referred to as System/Finder), are also required to round out the package.

The Spectre software is currently at release Version 3.0. Gadgets supplies fairly frequent updates to allow you to keep up with the Apple OS releases. The Version 3.0 update retails for $20. Version 3.0 supports 15 of the 128K OS releases up to, but not yet including System 7 releases.

Spectre software supports Mac formatted disks (including formatting your own) with your Atari drives, Mac sound, large screen displays (1280x960) Mac harddisks via SCSI through a Megatalk board (retail $299.95 from Gadgets) or through an ACSI-SCSI host adapter (my Syquest works beautifully- and

the excessive use of disk accesses in Mac software will have you wanting a hard drive). Spectre 3.0 also supports DOS Mounter and Apple File Exchange if you are needing MS-DOS data disks for Mac work. Language configuration support, keyboard support, A4 paper size support for Lasers have also been added to 3.0.

Running Spectre:
The feeling you will get when you see your Atari transformed into a MacIntosh with a decent screen is indescribable. The extra flexibility that you get will also make you feel more confident in the greatness of your Atari. You will also get to see some of the frustrations with one of the other sides of the fence - frustrations like excessive disk access, remembering not to remove/change a disk unless the OS tells you to, etc.

Speaking of changing disks, there are major differences in the operating philosophies of an ST and of a MacIntosh. You really must read the documentation that comes with the Spectre GCR (and I for one found that a real delight. Dave and Sandy have a very different approach to software documentation that makes it enjoyable reading.) You should also read the Mac Operating System docs. One other reference you may need if you are going to do much with Mac software is one of the reference manuals referred to as the MacIntosh Bible.

If you ask an Apple dealer if a particular piece of software runs on a GCR, don't figure you will get a straight answer. They won't know. The current compatibility list from Gadgets lists about 450 programs and their release numbers that have been tried and found to work with Spectre GCR. In general, if a piece of software won't work with the GCR, it is probably becuase of copy protection. Most serious Mac software is not copy protected.

One last note - earlier versions of the emulator exist that were not capable of reading Mac disks directly. It's a capability you will want.

(Thanks to Shoou-yu Tang (sytang@lamar.colostate.edu) for this info.)

Spectre GCR is the best availible, you need to obtain a set of 128KB ROM from Apple (they are used in Mac 512KE and Mac Plus, noted that Mac512 use older 64 KB ROM which is not good) to fully utilize the device. Also it's recommanded to use it with MONO monitor and at least 2MB RAM. The Spectre software takes about 300 some KB of memory, so on a 1040 there is not very much left for Mac, especially after the Mac system is loaded. 4MB memory and MONO is best.
It can read/write Mac disk direct using ST's drive (double side drive, as most Mac drive is double side). With DOS mounter or software like that you can read /write ST, IBM disk from the Mac desktop as well (don't try to run the ST, IBM binary. It's only for file transfer). Or you can use Apple File Exchange to read/write ST, IBM disk.
Syatem 6.0.5 runs fine, system 6.0.6, 6.0.7 runs also. But system 7 will not run with it.

:UPGRADE: ??.??.??
Can/should I upgrade my ST?

The answer depends on the type of ST you currently have, and what you want to do in the future. Be aware that there are a large number of modifications one can perform on the venerable 1040ST, and that newer machines are coming down in cost so much that to obtain a certain feature it may be cheaper to purchase new than to upgrade.

1. Memory - most ST machines may be upgraded to 4 megabytes. The newer STe machines use either SIP or SIMM

2. TOS - for those still running TOS 1.0, now is the time to consider an upgrade. TOS 1.4 has been around for at least 2 years now, and is -much- faster (and safer) for those using hard drives. TOS 2.06 is available as a hardware upgrade to ST and MegaST machines for about $150 from CodeHead

==========
Hope you liked the comp.sys.atari.st FAQ. If you have comments, suggestions, more material, etc., mail me at sourada@iastate.edu

Thanks to David Paschall-Zimbel (davidli@simvax.labmed.umn.edu) for compiling most of this FAQ.

2314. Wanna do the FAQ?

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 00:58:11 UTC
From: sourada@iastate.edu
Message-ID: <sourada.760150691@pv0c02.vincent.iastate.edu>
Source record: 193623

I don't mind continuing to post the FAQ; after all, all I have to do is type one command.

The problem is, though, I haven't been doing anything other than posting it lately. I don't really have a lot of spare time on my hands to work on it now, so it's been stagnant.

So, if anyone is enthusiatic about working on this stuff and taking over my position as FAQ maintainer for this group, talk to me...

Later,
Steven

>
>I've put him straight about how to get good utils, now it's only GCC.

What standard front-end is that? If he's just asking about the gcc compiler driver, the answer is not quite; it doesn't use the GCC cross-compiler support, and so will not allow switching in that manner. But the backend programs can be reselected using the GCCEXEC environment variable.

For cross-compiling to Linux all that should need changing is the library and the linker. GCC on the Atari always assembles to standard a.out format object files. If Linux uses a.out format, then the Linux linker can be used directly. The ST-modified linker turns a.out format .o files into TOS format executables but the original Unix-specific code is still there, surrounded by #ifdef's, so it could be used as well.

(The assumption is that Linux doesn't have strange register-based calling convntions or some other oddity to prevent it from being able to use the existing gas configuration, etc...)

2316. Nova VME 16m; EMULATOR.PRG problems on TT?

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 02:00:36 UTC
From: dud@u.washington.edu
Message-ID: <2in1g4$fl5@news.u.washington.edu>
Source record: 193624

I wonder how many of you out there who read this newsgroup have Nova graphics cards?

Anyway, ever since the first update of the Nova VDIs on world.std.com, I've been having trouble with the EMULATOR.PRG. This is the first program that runs in the AUTO folder; I believe it's main purpose is to redirect the video to the graphics card instead of the regular video port.

This is my problem: EXCEPT for the very first version of EMULATOR.PRG that came on my original NOVA disk, none of them have worked right. Running the original version, either from the desktop of the auto folder, causes my 17" multisync to show a 640x400 raster, and causes my PTC1426 to show some unreadable color-shifted characters. The new ones do not do anything to the 17" monitor, though they still show the color-shifted characters on the PTC1426. Running EMULATOR.PRG first in my AUTO folder, the hard drive continues to read for a while, until it gets to the desktop (I can tell because once it stops reading, I can hit ALT-C and it reads the drive; presumably opening a window for drive C).

The new versions of MENU.PRG and STA_VDI.PRG still work fine, so I've been using the old EMULATOR.PRG with the new STA_VDI and MENU. I don't think this is the best way to do it; with the latest version of MENU and STA_VDI, I get a "Gemdos called recursively" error whenever I boot up in more than 16 color mode! I hope this is only due to the difference in versions of EMULATOR and STA_VDI.

I talked to Yat Siu and Lee Seiler, neither of whom have been able to figure out the problem. They didn't know anyone else who's had any similar problem, and they themselves have used the latest versions of EMULATOR on their TTs with NOVA VME 16m cards.

So, has anyone out there have any idea what the problem could be? I'm not making any stupid mistakes like using the STE or VME+ versions of the software (though surprisingly it made a raster on my 17" monitor when I used the latest VME+ version of EMULATOR.PRG; the screen memory was just scrambled). I tried resorting everything in my AUTO folder, running nothing but the Nova stuff, even running nothing but different versions of EMULATOR.PRG, with the exact same results every time. I don't know what else to do...

Thanks for any advice, suggestions, help, or even random mumblings... :)

From the normal Atari desktop double-click on mgif.ttp and type in the name
of the file you want to view. After the title screen comes up you may
then need
to press a key to continue, this depends on the version of mgif you are
using.
Make sure that the program has the .ttp extension or you won't get a
chance
to supply the file name. On later TOS versions or when using Neodesk
(others
as well I think) you can just drag the file onto mgif.ttp and the
program gets
the filename automatically.

Good luck

From what I saw on the 680X0 channel, the amiga Linux people use the gcc -B
switch (or was it -b?) to switch some tools. We do that too with -B if we
want to get a symbol table for gdb, so I think it should work just fine.

Yes, as a matter of fact I needed a linker too that linked to a.out format,
and did just that. I can now use ld -r and get a linkable .o file. I needed
that functionality for the dynamic linking of Objective-C Classes, using
gnu dld-3.2.3, which I 're-ported' so that it works and can cope with
symbols > 22 characters (using a .sym file, :-( ).

Maybe it's time to look into teaching MiNT to load a.out relocatable files
(i.e. normal .o files).

Can anybody help?

Does anybody know if it is possible to ply Knights of the Sky dual player using a null modem cable? I know the Am*ga version can, but there doesn't seem to be a 'head to head' option on the main menu. Was this feature never implemented, or do I have an old version of the game? I think I remember getting an addendum with the games, but the box is at home - I only have the manuals with me.

Any help would be appreciated.

Rodders.

P.S. Any other good two-player/null-modem games??

The board was tested in the ST-Computer 2'94 and it seams as if it is
really a little bit faster than a TT. Running higher resolution screens
won't reduce the performance significant, because you're using Fast-RAM with
that board (if you're not, you will be - of course - not much faster than
the normal 32 MHz boards).

>>Aother thing:

I have some text files which I have a feeling are saved in the
IBM equivalent of ASCII (256 chars instead of 128)

Is there a program to convert it to ASCII or to display it some how???
Or is there another format similar to it.
Not even Redacteur would load it in properly.

Any ideas ???

Not exactly, on the Amiga blitter a shift is always free, as is logic with a
combination of blitter-channel A and D. It's when you are beginning to
involve logic with blitter-channels B and C that things get a little bit
slower.

Buy a pair of personal CD player active speakers. Plug em into the headphone
socket. Open the Falcon, unplug the internal speaker. Ta da! Vastly superior
sound with a separate volume control...
Okay, so you void the guarentee...

In <CKI9x7.86y@newcastle.ac.uk> Craig.Graham@newcastle.ac.uk (Craig Graham) writes:

>In article <2iih5r$fb3@news.delphi.com>, Dom Alvear writes:
>>Second, and more importantly, I am looking for any hints and tips for using
>>Ultrascript with PageStream 2.2b. I already have the PS35 screen fonts, so
>>unless I can use the Ultrascript PS fonts (which I don't know if I can), I
>>just need to know how to get Ultrascript and PageStream to work together to
>>print PS documents on my Okidata OL400.
PageStream 2.2 comes with the font pack that contains the remains of the
PS35 set. It assumes that your printer has these, and uses the built-in
set. HOWEVER, if you read the REAME file, it says that you can delete
one file per font, then PageStream will use the PageStream version of
the font instead of the PostScript version. As a result, it will convert
the PageStream version to PostScript, and download it as part of the file.
So, you can print the PS35 set to a printer without all those fonts.
And, therefore, you can print to UltraScript without the extra fonts.

>I don't get it - you can use postscript fonts in pagestream itself (I know,
>I've got loads. And they work fine for display & printing on anything you like.

>So why does this guy want to use Ultrascript to print when he can do it direct ?
There may well be good reason. I do not have UltraScript but I do use
GhostScript. Only yesterday I did some experiments, and showed that printing
using the PageStream Dj550c driver gave *Vastly* inferior results to using
GhostScript (and the PageStream PostScript driver). The latter route is
obviously slower, and one has to look out for a problem with GS2.6.1, but
the results I got via this route were quite impressive.

The main difference between the direct and via-PostScript routes is in
the colr representation. The PageStream 550c driver generates unpleasing
half-tone patterns, and seems to dump too much black ink. The GhostScript
driver uses random dithering, which seems to give better results on
nearly all output.

>Everyone see Atari mentioned in the gossip column of the Jan 31 InfoWorld?
>'Cringely' says the Jaguar isn't selling so well...

Considering it hasn't even been release nationally yet (or
internationally) how could it be selling a ton? I'd be more curious
to hear how it's selling *where it's being sold* (i.e. are they
getting sold out, etc?)...

>and speculates that either
>IBM or <someone else....Sega, maybe?> might want to buy the company and
>basically use it as a game trademark.

Interesting rumor. Let's see, first it was Commodore that was
going to buy Atari, then possibly Nintendo, and now Sega. Interesting
that a company that most people in the world thought disappeared in
the 80's would be so attractive to big names (according to rumors :-)

>I personally think that if the Tramiels didn't get a kick out of owning a
>computer company, Atari would have folded long ago--like about when the size
>of the Federated fiasco came out. So I don't think Atari is for sale, and I
>think we'll see a Falcon+ before a Jaguar II. But I know even less than

Or if we're lucky, a Falcon with maybe an 040 and the Jag's
specialized chips? Would be cool...

From a purely business standpoint, I'm sure people wonder why
Atari (and Commodore) continue to manufacture "non-standard"
(i.e. non-MAC/IBM) equipment. Well, the Tramiels seem to be surviving
on it regardless (besides, it's fun to buck the trends :-)

: the latest I know of - look for an 'E' in the filename to denote the
: English version. You should find info in the archive which describes how
: to register in your country of origin.

The latest version of CoNnect is 2.45. I just found it in

ftp.uni-kl.de:/pub3/atari/incoming/connect_v2.45_english.lzh

Oh and by the way, for general usage and speed (its not GEM) I think
UniTerm is excellent. I do not think it is very fair to class this amazing
piece of programming, which started development as early as 1988, as
'crap'. It strikes me that you have not seen it in action. The one problem
with UniTerm is that it will not run on the Falcon (at least not easily).

I like CoNnect too, particularly the fact that is fully GEM and MultiTos
compliant, but I find with it, it is not as easy to get a certain thing to
occur, such as 'CTRL-F4' in UniTerm does a text screen dump to the printer.

So the moral is, try a few terminal packages before you decide which is
the one for you. Luckily, all but Stalker are Public Domain or Shareware,
so you can try them without incurring too much cost.

Steve Taylor.

2343. Re: Falcon Monitors.

The only monitor which will display all current Falcon resolutions (RGB and VGA) is a low-range MultiSync monitor: these cost around 450 UKP. To enable them to operate also in RGB modes, a simple switch needs to be attached to the monitor adaptor - Email me if you want details of this, although it has been posted here before.

Steve Taylor.

2344. How to start GEM programs from mupfel?

I challenge all comers for Populous I or II (loser pays the phone bill :-).
Also, Falcon and Stunt Car Driver are excellent. Falcon is really incredible
in two player null modem mode. I know that Populous can be played across
platforms (i.e. on can modem a PC and an ST together and play). I presume
Populous II would be the same way. I'm not sure about the others.

Finally, there is a freeware/shareware (I can't remember) game on atari.archive
called rayoid that supports modem play. It is sort of an asteroids clone.

2352. MSA, Piracy, misc.

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 15:33:07 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <2ioh3j$5c2@charm.magnus.acs.ohio-state.edu>
Source record: 193740

Well, my usage of MSA has been nothing short than a B movie Horror flick. The only program that I was ever able to partially get to work with MSA was Chaos. When I say partially, I mean to say that the program is in two MSA parts, but it runs fine with only the first file. IF the program is supposed to be on two disks, then I don't know when it asks to switch disks, The program works fine, but it seems to be missing two-three sound files (which I have no idea where in the program they are used...)

I should try to create a list of all of the msa files from the archive that I have not been able to get working... I know of at least ten that don't seem to work.

I really don't care if it is good for piracy, if it is, then those pirates are having better luck using the program than I. Piracy in my opinion is what ruined the atari 8-bit, not the creation of the ST. If we want to doom Atari (or any other platform) to an early grave, than keep this up.

As a general consensus, and not to discredit its programmer, would it be possible to convert all of the MSA programs to other, more stable archive utilities, Or make sure that the programs that do use MSA do work properly? I understand that this is going to take take alot of time, and I would be willing to try to see which ones work. It just riles me a little when I download a file from the archive, then download it overnight onto my system and then not have it work...

==========================================================================
TOWNS' LITTLE GUIDE TO REVISIONS - VERSION 1.0
------------------------------------------
Written by John Townsend, Atari Corporation
==========================================================================
This is a small document that explains in very terse terms the
differences between the TOS revisions available for ST/MEGA/STE/Mega
STE/TT machines, what patches are needed for what revisions, the formats
they are available in, and any notes I can think of.
I hope this will clear up some of the confusion with the different TOS
versions. If you have any questions on this document, please let me
know here on GEnie. My GEnie Address is: TOWNS.
Special thanks to Leonard Tramiel, Allan Pratt, and Doug Wheeler for
their involement with this little Document. Thanks again!
Comments are welcome..

-- John Townsend
Atari Corp.

ROM TOS (TOS 1.0)
-------
The original ROM TOS, this version shipped in 520ST and 1040ST machines.
It is no longer shipping in any machines.
Formats: 2 chip ROMs, 6 chip ROMs
Machines: 520ST, 1040ST
Utilities: FOLDRXXX.PRG
FOLDRXXX.PRG will add more entries into your OS Pool. In TOS 1.0 and
TOS 1.02, the limit for the number of directories that you can enter is
around 40. With this program you can extend that limit much higher. If
you are using a hard drive, this program is recommended highly. It will
work with all TOS versions and will improve the performance of your
system.

Notes: GET TOS 1.04 TODAY! TOS 1.04 is the latest version of TOS for
520/1040/MEGA owners. It is MUCH faster, has faster, better
disk I/O, many other improvements.
MEGA TOS (TOS 1.02)
--------
This is commonly referred to as MEGA TOS. This version of TOS fixes some
minor problems in TOS 1.0 and has support for the BLiTTER chip and Real-
Time Clock chip.

Formats: 2 chip ROMs, 6 chip ROMs
Machines: 520ST, 1040ST, Mega 2, Mega 4
Utilities: FOLDRXXX.PRG
```

FOLDRXXX.PRG is explained above.

Notes: See notes for TOS 1.0.. GET TOS 1.04 TODAY!

Rainbow TOS (TOS 1.04)

TOS 1.04 or Rainbow TOS, as it is commonly known is the latest version of TOS available for 520/1040/MEGA owners. It has been available as a dealer upgrade for awhile now. It has much more robust Disk I/O, Autorunning of GEM programs at boot up, a fix for the 40 folder limit, and much more. Most of all is it much faster than previous versions of the Operating System.

Formats: 2 chip ROMs, 6 chip ROMs (available as Upgrade!)
Machines: Stacy
Utilities: TOS14FIX.PRG, POOLFIX3.PRG, CACHEXXX.PRG, FOLDRXXX.PRG
TOS14FIX.PRG solves some small problems in the AES (for additional information, please see the documentation that accompanies the TOS14FIX.PRG program).
POOLFIX3.PRG fixes a bug in GEMDOS. Documentation that accompanies the POOLFIX3.PRG program explains (in detail) the problem that it fixes.

CACHEXXX.PRG is a new program that adds GEMDOS buffers to your system. The caching of data and disk directories by GEMDOS (when this program is used) will result in your system running much faster! This program is highly recommended and requires TOS 1.04 or higher for full benefits!
FOLDRXXX.PRG is explained above.
Notes: Please use the utilities available and if you haven't upgraded to this version of TOS yet.. please consider doing so. It's a very worthwhile upgrade.

There are some disk-based versions of _early_ developer only releases of TOS 1.04 floating around on BBS systems here in the United States and abroad. Please don't use them! They are bad news! They have some very nasty bugs and have been known to corrupt data!

STE TOS, Rev 1 (TOS 1.06)

TOS 1.06 is the TOS version that is shipped with the 1040STE and 520STE machines. It is essentially TOS 1.04 with support for the new hardware that the STE has.
Formats: 2 chip ROMs
Machines: 520STE, 1040STE
Utilities: STE_FIX.PRG, POOLFIX3.PRG, CACHEXXX.PRG, FOLDRXXX.PRG
STE_FIX fixes the infamous Desktop Medium/Low resolution bug. The problem is that there is a bug in the desktop code in this version of TOS that prevents the user from booting into Medium Resolution. The patch program STE_FIX will solve the problem. Once it is executed in the AUTO folder, the problem no longer exists.
FOLDRXXX.PRG, CACHEXXX.PRG, and POOLFIX3.PRG are explained above.
Notes: This version is only available in 1040STE and 520STE machines.

It isn't available for upgrading. It won't work in older
machines.

STE TOS, Rev 2 (TOS 1.62)

This is a slightly revised revision of TOS 1.6. It fixes the POOLFIX
problem in GEMDOS and the problem in the Desktop that was present in
TOS 1.06.
Formats: 2 chip ROMs
Machines: 520STE, 1040STE
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG
CACHEXXX.PRG and FOLDRXXX.PRG are explained above.

Notes: This version is only available in 1040ST and 520STE machines.
It isn't available for upgrading.
Mega STE TOS (TOS 2.05) ---
TOS 2.05 is the version of TOS currently shipping in the Mega STE.
Formats: 2 chip ROMs
Machines: Mega STE
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG
CACHEXXX.PRG and FOLDRXXX.PRG are explained above.
Notes: This version is only available in the Mega STE. It isn't
available for upgrading.
TT TOS (TOS 3.01) ---
TOS 3.01 is the version of TOS that originally shipped in the TT030.
Formats: 4 chip ROMs
Machines: TT030
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG
CACHEXXX.PRG and FOLDRXXX.PRG are explained above.
Notes: This version is only avaible in the TT030. It isn't available
for upgrading.
TT TOS (TOS 3.05)

TOS 3.05 is the latest version of TOS currently shipping in the TT030.
Formats: 4 chip ROMs
Machines: TT030
Utilities: CACHEXXX.PRG, FOLDRXXX.PRG, SERPTCH1.PRG
CACHEXXX.PRG and FOLDRXXX.PRG are explained above.
Notes: This version is only avaible in the TT030. It isn't available
for upgrading.

This isn't quite true... My MegaSTe, at least, would look more like
this:

Mega STe 16 2S 2.06 FM AV,6U

Was there ever a MegaSTe shipped with 1 meg?

Mine, at least, has an RF Mod..

There's no STe-style 15-pin analog joystick ports that I can see!

There's no Megabus slot either!

hoo well!

I'm just keeping my request alive. I have another gemar 1.x distribution now. Still doesn't claim to have been tested on the Falcon (which I'm told is the big practical advantage of the latest version). Still no English language stuff. Honest, folks: if this is a way to use my tape backup unit I'm willing to send money. I'll even buy mark-denominated travellers checks if that's the right way to pay. Answers?

Steve

There are a lot of Z-Modem packages out there for Unix systems. Why don't
you put one on the unix box and switch to zmodem transfers. The SZ prg
on my Unix box is about 54000 Blocks. Small.

But the serial connection to the Unix host is not 8 bit clean, so I have to use Kermit when uploading files - I do however use SZ for downloading files from the Host.

You can't connect to RGB as home videos don't output it. You can connect the composite video though and a lead for phono-scart or whatever your video has would be easy to get at most places like Dixons.

I don't know about CD-ROM drives on Atari, but in a PC environment, a CD-ROM program may still hog as much as 15 or so megs of hard-drive space. The main reason for this is that CD access times are nowhere near as fast as a decent hard-drive. While CD ROM would certainly be nice for cataloging large amounts of data, they are rather awkward in anything where lots of frequent access is called for (i.e. games). All in all, I am pretty unimpressed with CD-ROM technology, and getting one is pretty low on my list of priorities.

Uh, many MSA files are in two parts _for one disk_!!! This is to keep the
size of the files down to something a PC floppy disk can handle (under 720k).
Many demo disks use an extended format (most of which MSA can handle just
fine, BTW) and end up being over 800k. Splitting the files makes life easier
for those that use PC formatted disks to transfer files around.

As an example, for many demos that come in two parts, the first file contains
tracks 1-41, and the second contains tracks 42-82. Thus, you restore _both_
MSA files to the same floppy disk to recreate the original.

So, go and get a copy of MSA 2.3+ from atari.archive, and look a the file
information when you use it (there is an "info" button)! If the file only
contains part of a disk, obviously one needs to restore more than one file
to rebuild the disk.

I'd bet that most of your failures have to do with this phenomena. It
sounds like your working Chaos disk did so only by pure luck (i.e. it did
not care about accessing anything past the first 40 tracks or so, or at least
did not die from it).

> As a general consensus, and not to discredit its programmer, would it be

> willing to try to see which ones work. It just riles me a little when I
> download a file from the archive, then download it overnight onto my system and
> then not have it work...

MSA is perfectly stable, given that your floppy drive can handle up to
82 tracks, 10 sec/track!! Even the older versions worked fine on my
box-stock Mega2ST. Get a copy of DC Maxtracks and find out if your floppy
is one of those that barfs on anything over 80 tracks (it is also available

from atari.archive). If so, look into having it swapped out for one that can handle extended formats.

It sounds to me like your problem is one of misunderstanding. MSA is a format that requires a bit of understanding concerning technical information about floppy disks (i.e. what constitutes an extended format, what constitutes a partial disk, etc.). So, here is the scoop.

A "regular" DSDD floppy disk on an ST is formatted 80 tracks, 9 sectors per track. Anything above this (for either numbers) is an extended format. A very common one is 82 tracks, 10 sectors per track, which virtually every ST/TT can handle (you might be one of the unlucky few, DC Maxtracks can tell you this). In addition, there are also special methods of formatting (independent of the number of tracks or sec/track). A very common one is "twisted" or "skewed" formatting. This method orders the sectors in such a way as to double the speed of reads and writes! I use 82/10 Twisted disks almost exclusively on my ST, except when I need DOS compatibility (for that I use ps2form.tos, again from atari.archive).

MSA is a program that allows one to transfer an entire diskette in a single file. It analyzes the floppy to figure out the format, and writes this information, the boot sector (which may contain code to enable the disk to boot and execute without an auto folder, or even any "files" as you normally think of them), and the data from each sector on the disk to a file. You can tell it to do only part of the disk, and it handles it just fine.

MSA was not intended for piracy per say, though it is often used to transfer "cracked" game disks. The "cracking" of the disk involves getting rid of various copy protection routines such that the disk can be duplicated by something simple like MSA. In general, even trivial copy protection will defeat MSA. So, MSA is not a pirate copy program, and was not intended for piracy (I had an email conversation with the original author some years ago). It simply makes it easy to transfer self-booting disks around.

Hope this helps.

: made with some Standard Applications. The avarage improvement in "real life
: situations" is 72%.

well, one thing I've come around this weekend is a test in a 1986 issue of "mc"
a German magazine. They have compared a *fast* 13 MHz 286 with a ST and an INMOS
Transputer. The result has been very poor for the ATARI. But wait, they used the
Megamax C-Compiler. So I typed the program in and compiled it with Pure C. The
difference is 55 seconds (Megamax) to 20 seconds (Mega ST).
Since you all used the same compiler there has to be a different reason.

One thing about the dhrystone: It uses mainly the instructions RISC systems are
designed for so the ARM gets these very high ratings. There are other benchmarks
that use floating-points and the math-library, a computer equipped with a FPU will
win on this test. For example there has been a demo on the last CeBit where a
falcon has outrun an Alpha PC with fractals because the programmers used the
fixed-points on the DSP.
These benchmarks don't tell the truth!
More important is, if you have to wait for a redraw of the screen or not. The
time you need to compile a program - or whatever you do with your computer - is
more relevant than comparing the times your computer needs to shuffle the towers
of hanoi. You will have to compare the applications! Is your word processor as
fast in searching and replacing as the others or faster? How long does it take
to print 10 pages?

I fear this posting is not that helping on benchmarks though it may help well
on comparing computers.

Bye,
Stephan Gross (1gross@rzdspc5.informatik.uni-hamburg.de)

: Result: The Dhrystone benchmarks aren't Cache-friendly (they don't seem to
: fit in the F030-Caches). As the F030 only has a 16 bit data-path to the
: memory, the results of the benchmarks turn out bad.

: codes for Lemmings actually) and I saw an article about "inside the mega ste".
: Since I have recently acquired a used mste I started reading. One interesting
: point was that they claim ALL megas have 1.44 floppies, and if you use the
: standard system format it will give you 1.44!!! Can this be right? They also
: state that the manual says nothing about the 1.44 capacity of the computer.
: This was when the mste first came about, so this would apply to the earliest
: mste's. Is anyone sure of any of these 'facts'?

Not all MSTe's have 1.44 floppies, but most (the newer ones) do. If you
don't have one, you should be able to get one by upgrading the drive
controller chip, and the drive and the TOS version (if necessary). Try
formatting a high density disk with the system format and see what
happens.

2366. 57k bps on 1040STe serial port possible?

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 17:50:06 UTC
From: selick@bu.edu
Message-ID: <2iop4f$8tc@news.bu.edu>
Source record: 193604

I have been getting a consistent 1932 CPS on my 14.4 fax/modem with Zmodem, and I was wondering if there is a simple way to get 57kbps through the standard serial port with software? If not, is there a diy upgrade or relatively cheap commercial upgrade for the port? In Computer Shopper the review of my Computer Peripherals ViVa 14.4 says they got 5,170 cps! I'd love to get it with Uniterm, but would consider a shareware fee or something like that if another package will deliver 57kbps zmodem and vt100 compatibility.

Thanks,
Steve

> Is there a program to convert it to ASCII or to display it some how???

You can convert EBCDIC to ASCII with the dd command. For example:

dd if=foo.ebc of=foo.asc conv=ascii

will convert the file foo.ebc and write ascii output to foo.asc.
Look at the manpage for more information.

: I'm looking to upgrade from 1st Wordplus to a wordprocessor with scalable fonts.
: The choice to me seems to be between Calligrapher using its own system and buying
: Speedo GDOS and a compatible WP.

I've recently bought 1st Wordplus 4 from Compo Software. It's really good! You can use every font in the SPEEDO package together with the old GDOS-fonts. If you buy a new font you have to send it to them so they can give you a font-file that they use together with the SPPEDO font. This file is needed since 1ST WP 4 runs even without SPEEDO-GDOS and displays even then the new fonts.

This wordprocessor comes with the Langenscheidt spell-checker and some other languages are configurable.

Pick up a copy of Connect. Contained within are some references to hardware mods that will increase your serial speed without errors. Also, there is a file 38400.lzh on ftp.math.fsu.edu (192.12.122.28) that was recently posted here. It contains instructions for a very simple mod that will give you 38.4k on a regular ST. You might also be interested in gszrz228 (a GEM Zmodem that is really nice) and some Uniterm macros I hacked together for it (rzsz_mac.lzh).

Connect has specific support for the hardware mods it mentions. Other programs will probably have 19200 mapped to 57600 baud, or some other hack. Connect is definitely worth a look. It is a fine program. The latest version is 2.45 on ftp.uni-kl.de.

You failed to mention what kind of ST you have. This makes a difference! Incidentally, do you get 1932 on binary downloads? This is better than I have been able to get (I average around 1600CPS during binary downloads).

>slower.

Logic with A & D? What sort of logic is that? You can do either D=A, or D=0.
That's hardly logic, is it? D is write-only, you can't perform logic with it.
The only thing you can do with Channels A and D is a straight move. To do logic
you must have more channels, which as you said, makes it slower.

> CR> beginning.
>Uhhh?!?
>I think these MACs are closer to NeXT than Falcon...no?

The PowerPCs are *much&* more than just "fast Macs". They, along with the PC clones which will be based off the same CPU, represent the next generation of computing. Atari (or Commodore) will have nothing to compare; they will be wandering around with the then-anemic 68000 series until Apple, IBM and Motorola decide to sell other manufacturers the chip (which won't come for a long while, I'm certain).

I also find it amazingly humorous at how many Atari users (and Amiga users) bash the Macintosh. Talk about insecurity! I own both an ST and a Mac; I've been on both fronts, and I'm well aware of Apple's attitude and Atari's attitude towards their customers (both personally and financially). Now you know why I switched my primary computing platform to Mac.

2379. HELP - games on Mega/STE!

Newsgroup: comp.sys.atari.st
Date: 1994-02-02 21:57:36 UTC
From: lancer@wpi.WPI.EDU
Message-ID: <LANCER.94Feb2165736@wpi.WPI.EDU>
Source record: 193630

I just got a MegaSTE (one of many from the looks of it!)

I'm having some problems with some games... Notably Populous I...

It works fine on my old 1040STf, but when I try to boot it on my MSTE
it just goes to the hard drive. If I try to look at the disk I get a
message that says the disk is bad! This must be a copy-protection
problem, I just don't know how to fix it!

Any suggestions?

Also, can someone clue me in as to the MegaSTE's booting proceedure?
I figured out that if you hold ctrl-shift-alt it'll boot from the
floppy (or am I just fooling myself?)

Is there a special keypress on bootup which causes it to behave
differently?

thanks,
.s.

This is a quite a coincedence! Today I just bought a 14.4kbps V42bis
modem for my ST (Supra 144L) and this afternoon I used ftp from the
office to get Connect v2.45 from ftp.uni-kl.de:/pub3/atari/incoming.

I've unarced the stuff and lo, there are some programs in there which
do indeed claim to increase speed up to 57kbps. However, all the
documentation for them is in german. Now, I did german at school many
eons ago, so I just about figured that the main program is MFP.PRG
which hooks into TOS's mfp interrupt for the ST rs232 port and is
written in such a way that it services the interrupts much quicker
than TOS. When I get home tonight, I'm going to try this out to see
if it can indeed be done.

They do seem to mention that a standard 8MHz ST may experience some
problems when blitting and/or long DMA accesses occur at the same
time as 57kbps transfers due to lack of CPU bus bandwidth. If this
is the case, even an ST with AdSpeed ST (e.g. mine!) would have
similar problems since only the CPU runs at 16MHz; the system bus
still runs at 8. :(

Anyway, I'll try this out tonight and report tomorrow on how it
turned out!

Cheers, Steve.

PS. If anyone fancies doing a full translation on those docs.......

Source record: 193635

>Does anybody know if it is possible to ply Knights of the Sky dual player
>using a null modem cable? I know the Am*ga version can, but there doesn't

Its single player only according to the box, and I've never found any
options in it to do anything else. Pity really as I *do* have 2 STs.

Unfortunatly it appears that the ST mags (at least in the UK), didn't get to
see the final version before reviewing it - and Atari ST User at least
stated it had a 2 player mode without actaully testing it (though the
review sort of implied they had done).

:-(

>Back in 1990, I heard rumours about STOS-PRO. This was supposed to be
>STOS with no line numbers, and more structure in the programming.
>This also never materialised.

Now, I don't suppose anybody remembers me saying "You should program with a real language like C, C++, Modula-2 or Pascal so that what you learn will be portable to new machines" the last time there was a language war here, but that's always been my position, and the deterioration of STOS is yet another example. Even Pascal and Modula-2 are risky at the moment, but they do teach good programming practices.

The time has also come for us to be VERY careful when considering writing in assembler. Write your VITAL components in assembler if you really must, but not the whole program. Assembler programming will soon be useless. Mark my words.

Ever tried assembler on a RISC machine? Whether it's programming a RISC PowerPC, or trying to schedule instructions for a Pentium, you won't be able to compete with the compiler's abilities.

I'm not trying to start a flame war: I'm sure there are people out there who think that all they will ever want BASIC can provide. I'm just saying be careful. I changed from Modula-2 to C++ a couple of years ago, because of foresight.

Programming an uncommon computer is one thing. Doing it in an uncommon language is something totally different. I say these same things to people who insist on hacking 386 assembler.

>GEM: Graphic Environment Manager. This is the GUI.

Sorry Ed, computers don't have a GUI. Applications have a GUI.

Computers have a GUI Standard, that [attempts to] prescribe how an
application's GUI should look and behave. This is usually done by
providing an API (Application Programmer's Interface) which restricts
the range of GUI's that are possible so that they all follow the
GUI Standard.

It's just a heap of TLA's really.

Chances are, you'll just type this:

sz filename

STalker will automagically detect Zmodem, and start a download. To
upload a file from your ST, you'll have to go:

rz

on the Sun, and then STalker will automagially prompt you for a file (or
files) to upload.

>Will it necessarily be compatible with the Falcon 486 emulators that are
>hopefully being worked on now? How abouut Spectre?

As CD-ROM's are relatively new ground to many Atari owners, I am posting
the CD-ROM FAQ here.

It answers all of the above questions.

I bought a NEC CDR-74-1 based on this FAQ. Not that's I've even USED it
yet (getting a GIFs CD-ROM this weekend), so don't take that as advice
or endorsement, however, the FAQ notes that it:

1. Is an external unit.
2. Takes caddies (not direct disks, which are more prone to dust)
3. 280ms access 300K/s
4. SCSI II
5. Supports PhotoCD (ie. it is multisession)

As for Atari-specific CD-ROMs, there is at least the new GEMini CD-ROM,
which is basically an entire FTP site (is it atari.archive?) on a CD-ROM.
Now you can try all those programs without downloading them (and I think
they are stored both uncompressed and compressed on the disk, so you
don't have to decompress them, and BBS owners can mount the CD directly).

Here's the FAQ...

Archive-name: cdrom-faq
Last-modified: 1993/09/24

========================= FAQ alt.cd-rom ==================================

FAQ for the alt.cd-rom usenet newsgroup. This list is posted to
alt.cd-rom every month. The latest version is available via anonymous
ftp from ftp.cdrom.com: /pub/cdrom/faq. If you do not have ftp capability,
you can get the file by sending email to info@cdrom.com with the subject
"FAQ", or you can call 1-510-674-0783 and get it on a 3.5" MSDOS floppy
for $6 ($1 + $5 S&H) Visa/MC/Amex. This file is freely redistributable.
===

0. What is a CD-ROM?
1. What are some good sources of CD-ROM discs?

1a. What are some good sources of CD-ROM discs in North America?
1b. What are some good sources of CD-ROM discs in Europe?
1c. What are some good sources of CD-ROM discs in the Mid-East?
1d. What are some good sources of CD-ROM discs in Asia?
1e. What are some good sources of CD-ROM discs in Australia and New Zealand?
2. Can you recommend a good CD-ROM drive?
3. Where can I get caddies?
4. Are there any good periodicals and publications on CD-ROMs?
5. Why are CD-ROM drives so slow?
6. Is it important to have a fast CD-ROM? Does 300ms vs. 700ms really matter?
7. Is it important to buy a fully SCSI compatible drive?
8. Where can I get information on SCSI controllers for CD-ROM drives?
9. How much does it cost to make a CD-ROM?
10. I have a great idea for a CD-ROM but no money. What can I do?
11. Where can I get a CD-ROM published?
12. Where can I find equipment to make my own CD-ROMs?
13. Where can I get blank media for my CD-ROM recorder?
14. I have 10000 paper documents that I want to put on a CD-ROM. Who can help?
15. Are there any organizations of CD-ROM Publishers?
16. Where can I get more information about CD-ROM publishing?
17. How much information will fit on a CD-ROM?
18. Why doesn't MSCDEX work with DOS 5.0?
19. Where can I get the latest version of MSCDEX?
20. I bought a used drive at a garage sale. Where can I find a driver for it?
21. What is the difference between `High Sierra' and ISO-9660?
22. Where can I get a copy of the ISO-9660 standard?
23. What is an HFS disc?
24. Can you give a short explaination of ISO-9660?
25. What the heck does `Red Book' and `Yellow Book' mean?
26. What is CD-I?
27. What is CD-ROM/XA?
28. What are the Rock Ridge extensions?
28b.What systems support Rock Ridge?
29. What is ECMA 168?
30. Is a short technical introduction to these standards available?
31. Who comes up with these standards? Can I have any input to the process?
32. Are there any ftp sites with good stuff related to CD-ROMs?
33. How do I write an MSDOS program that can access a cdrom using MSCDEX?
34. How do I mount an ISO-9660 disc on a Sun?
35. How do I use a CD-ROM with OS/2?
36. Which CD-ROM Drives will work with MicroSoft Windows-NT?
37. How do I read an audio cd track as digital data?
38. Why do CD-ROMs cost so much?
39. Why do all the bundle deals require me to buy a drive? What if I
already have a drive?
40. Are alt.cd-rom archives available anywhere?
41. What is the shelf-life of a CD-ROM?
42. How should I handle my CD-ROMs? How do I clean them?
43. Which drives will work with Kodak Photo CD?
44. What is a "Multisession" CD drive?

45. How does Photo CD work?
46. Where can I get more information about the Kodak Photo CD?
47. Where can I get maps of the US on CD-ROM?
48. How do I put a CD-ROM Drive on a Novell network?
49. Are any CD-ROM Jukeboxes available?
50. Can I speed up my CD-ROM by using a cache?
51. Do you have any info about the CD-ROM filesystems for Amigas?
52. What are the most popular CD-ROMs?
53. What are some good references to CD-ROM reviews?
54. How do I read the UPC (universal product code?) from a CDROM?
55. How do I Put a CD-ROM driver on the Ethernet by using a unix system as a server and make it available to the PC and Mac.
55. ???? Please send any other questions (and answers) that should be included in this FAQ to rab@cdrom.com.

==========

0. What is a CD-ROM?

CD-ROM means "Compact Disc Read Only Memory". A CD-ROM is physically identical to a Digital Audio Compact Disc used in a CD player, but the bits recorded on it are interpreted as computer data instead of music. You need to buy a "CD-ROM Drive" and attach it to your computer in order to use CD-ROMs.

A CD-ROM has several advantages over other forms of data storage, and a few disadvantages. A CD-ROM can hold about 650 megabytes of data, the equivalent of thousands of floppy discs. CD-ROMs are not damaged by magnetic fields or the xrays in airport scanners. The data on a CD-ROM can be accessed much faster than a tape, but CD-ROMs are 10 to 20 times slower than hard discs.

You cannot write to a CD-ROM. You buy a disc with the data already recorded on it. There are thousands of titles available.

==========

1. What are some good sources of CD-ROM discs?

Jim Raehl has compiled an excellent list of sources for inexpensive CD-ROMs. His list is periodically posted to alt.cd-rom, and is available via anonymous ftp from ftp.cdrom.com:/cdrom/faq_disc.

You can get a list of about 85 CD-ROM titles by sending a blank message to CD-ROM@micromed.net.netcom.com [Several people have had trouble getting the list, so I have made it available for anonymous ftp from ftp.cdrom.com:/cdrom/micro.med]

2. Can you recommend a good CD-ROM drive?

The most highly recommended drive is the Toshiba 3401. It is a very
fast and very reliable drive. It is reasonably priced, but you will also
need to buy a SCSI controller card if you don't already have one. This
drive will work with MSDOS, Linux, Unix, Macintosh, and Amiga.

The NEC CD-ROM drives 336,37,73,74,83, etc. have received many favorable
recommendations. NEC CD-ROM drive information can be FAX'ed to you. Call
NEC Fastfacts at 800-366-0476, and then follow the directions. You will
be prompted for a Catalog or Product Number. Catalog Number 2 is for
CD-ROM and Product Number 730101 is for the CRD-73M and 730100 is for the
CDR-73. Similarly for the CDR-37. No information was available on the
CD-74. You will be prompted for your 10-digit FAX number and your local
voice telephone number. If you haven't received your FAX with 30 minutes
try again. For international callers, the Fastfacts FAX number is
+1 708 860-9500x2621. You can get documents, and drivers, from the NEC
BBS at +1 508 635-6328.

You can get information on Mitsumi drives by calling their US HQ at
(516) 752-7730. The Mitsumi office dealing with the SouthEast is in
Dallas. (214) 550-7300, FAX: (214) 550-7424. In California, call
(408) 970-0700. A FAQ on Mitsumi drives is available by anonymous ftp
from ftp.cdrom.com: /cdrom/drives/mitsumi.faq.

A FAQ on the Pioneer DRM-604X is available by anonymous ftp from
ftp.cdrom.com: /cdrom/drm_604x.faq

Here is a matrix of information on a number of CD-ROM drives. Please
send me any additions or corrections.

Eight Bit Books, Weston, CT
ISBN: 0-910-96502-1
$39.95

CD-ROMS IN PRINT 1992
An International Guide to CD-ROM, CD-I, CDTV & Electronic Book Products
Meckler Publishing
11 Ferry Lane West
Westport, CT 06880

Newsgroups and mailing lists:

On the internet, the best source of information is the newsgroup alt.cd-rom, which is linked to the BITNET list CDROM-L.

Those subscribing to CDROM-L may now choose to receive a daily digest of CDROM-L postings or an index to the daily digest. From the index one may easily request the full text of a posting.

To receive the INDEX, send the following note to listserv@uccvma or listserv@uccvma.ucop.edu (the subject is ignored):

set cdrom-L index

To receive the DIGEST, send the following:

set cdrom-L digest

DO NOT send to cdrom-L. Because of the high noise level of
this list, I recommend that people try the index.

The newsgroup aus.cdrom provides a forum for discussion of cdrom
related issues to Australian users that are otherwise lost in the
morass of postings in the US based groups.

The internet newsgroup comp.multimedia is a good source of information
on multimedia topics.

CDROMLAN (available on usenet as bit.listserv.cdromlan) covers the
use of CD-ROM products on local area or wide area networks. You can
join the list be sending the following command to
LISTSERV@IDBSU.IDBSU.EDU:
SUBSCRIBE CDROMLAN Your full name

CD-ROMs are in heavy use in libraries and government document
repositories, both for access to indexes and for distribution of
government data. The relevant lists are PACS-L
(bit.listserv.pacs-l) and GOVDOC-L (bit.listserv.govdoc-l).
Send to LISTSERV@PSUVM.PSU.EDU:
SUBSCRIBE GOVDOC-L Your full name
Send to LISTSERV%UHUPVM1.BITNET@VM1.NODAK.EDU
SUBSCRIBE PACS-L Your full name

Discussions of music on CD can be found in rec.music.cd.

For those who are contemplating buying a CD-ROM drive or just getting
your feet wet, Tony Thomas wrote a pamphlet on the subject which he will
be glad to send you FREE OF CHARGE while supplies last.

To receive "GETTING STARTED WITH CD-ROM", send a self-addressed, stamped
#10 envelope with 29 cents US postage to:

Tony Thomas
4421 Granada Blvd. #415
Warrensville Heights, OH 44128

Topics covered include:

How to Buy a CD-ROM Drive
Different Types of Drives
What You Need
Setup

A list of suppliers of CD-ROM hardware and software is also included.

==========
5. Why are CD-ROM drives so slow?

Compact discs were originally designed for music. When you are
listening to "Willie Nelson's Greatest Hits", you are accessing the
data sequentially and at a very regular speed. The only time you need
to seek is when you decide to skip over a song, or back up and listen
to "Always on my Mind" one more time.

In order to fit as much music as possible onto the disc, the data
is recorded at the same linear density near the outer edge of the disc
as it is near the center, so there is more information in the outside
tracks than in the inside tracks. In order to deliver a steady rate
of data, the linear velocity of the disc moving under the head is
constant, so the angular velocity of the disc changes when the head
moves from the center toward the outside tracks. This is no big deal
when you are playing music, but when you are trying to do random access
to a CD-ROM, the need to accelerate and decelerate the disc is the biggest
obstacle to making it faster. Most magnetic discs spin at a constant
angular velocity, so the data density decreases toward the outside of the
disk, but seeks are faster.

A few other reasons that CD-ROMs are slow: Optical disc heads tend to be
heavier than magnetic disk heads, so they have more inertia, and take
longer to stablize onto a new track. Many CD-ROMs contain too much data
to make effective use of RAM caches.

As time goes by, CD-ROM drives will get a little faster, but don't expect
any miracles.

==========
6. Is it important to have a fast CD-ROM? Does 300ms vs 700ms really matter?

It depends on what applications you will be using. Many CD-ROMs
are just big archives of stuff, and you can copy individual programs
to your hard disk before using them so speed is not really very
important. But if you are going to be using large ramdom-access
databases, or any kind of interactive multi-media applications, then
the speed difference is very noticeable.

==========
7. Is it important to buy a fully SCSI compatible drive?

Several CD-ROM drives only support a sub-set of SCSI, and usually
come with their own semi-SCSI controller card. Full SCSI compatible
drives usually cost more, but are better if you already have a SCSI
controller and want to daisy chain several devices, or if you want to
be able to use the drive on different machine types.

==========
8. Where can I get information on SCSI controllers for CD-ROM drives?

Many SCSI drive vendors recommend the Adaptec 1542-B SCSI Card.
The phone number for Adaptec is 800-959-7274 or 408-945-2550.

BusLogic (formerly BusTek) makes a very extensive line of SCSI cards for
ISA, EISA, MCA, and VL bus systems. Their ISA, EISA, and MCA cards are

register compatible with Adaptec's boards and hence have excellent driver support. Their number is (408)492-9090.

All modern Macintosh computers have SCSI built-in. Macintosh users should insure that the CD-ROM drive they intend to buy is supported on Macintosh machines by the vendor; many vendors recommend "FWB CD-ROM Toolkit", which can generate high-performance drivers that include cacheing (see [50]) for a modest price.

[If anyone sends me info on other scsi controllers, I will include the info here.]

==========
9. How much does it cost to make a CD-ROM?

You can get a master made for about $1300, and then about $1.50 per disc for duplication. So to make 1000 discs, it will cost you about ($1300 + (1000 * 1.50)) = $2800. Publishers often have `first-timer' specials with steep discounts off the list price. For instance, DMI recently had a special of mastering, 50 discs, and two hours of tech support for $750.

If you only want a few discs, you can have single ISO-9660 `one-offs' made for about $200 for the first disc, and $100 for additional copies.

==========
10. I have a great idea for a CD-ROM but no money. What can I do?

You can author a CD-ROM, and have someone else publish it and pay you royalties. One company that does this is Walnut Creek CDROM. Their author guidelines are available by anonymous ftp from ftp.cdrom.com in the file /pub/cdrom/author.txt.

==========
11. Where can I get a CD-ROM published?

I have used both of these companies, and highly recommend either:

Digital Audio Disc Corporation
1800 North Fruitridge Avenue
Terre Haute, IN 47803
812-462-8100, 812-466-9125 FAX

Disc Manufacturing Inc.
4905 Moores Mill Road
Huntsville, AL 35810
800-433-DISC, 205-859-9042, 205-859-9932 FAX

DADC is a subsidiary of Sony, and DMI is a subsidiary of Philips.

A more detailed list of 25 publishers in 8 countries is available via anonymous ftp in ftp.cdrom.com:/cdrom/publshrs.

There are now over 10 manufacturing facilities active in CDROM in North America, and another growing collection of write-once service bureaus.

These are listed in MFG.TXT in Lib #8 of the Compuserve CDROM Forum.

If you only want to make one disc, or just a few copies, there are
several companies that offer this service:

Compact Disc Services Inc.
1821 Saratoga Ave.
Saratoga, CA 95070
(408) 741-4770, (408) 867-0518 FAX, cdsi@netcom.com
ISO-9660, Mac HFS, Call for price

Client Services
OptiScribe Corporation
110 Pleasant Street
Marlborough, MA 01752
voice (508) 481-7255, fax (508) 481-7455
Data Conversion, Multimedia, CD-ROM Production Services

The One-Off CD Shop MidSouth, Inc.
109-C Jefferson Street N
Huntsville, AL 35801
(205) 534-3050 FAX (205) 539-9238
Prices range upwards from $115.00 for less than 40 MB delivered on a
single item of input media (i.e., one tape, or one Syquest disk, etc.)
to $230 for 650 MB also on a single item of input.

Optical Media International
San Jose, CA
(408) 376-3511, 408-376-3519 FAX
omi@applelink.apple.com
ISO-9660, Mac HFS, Call for price

PRU
10310 Main St. #361
Fairfax, VA 22030
703-354-8377
Special prices for sysops

Young Minds Inc.
1910 Orange Tree Lane, Suite 300
Redlands, CA 92374
909 335-1350, 909 798-0488 FAX, yngmnds!ayoung@ucrmath.ucr.edu
Rock Ridge (Unix), $950

==========
12. Where can I find equipment to make my own CD-ROMs?

If you want to do single copy `one-offs', or low volume CD production,
there are recorders announced by JVC, Philips, Sony, Yamaha and Pinnacle
Micro.

JVC Personal ROM-Maker $12500 (complete system, including software)
Philips CDD-521 $5500 (+ $1900 for software)

Sony CDW-900E $10000 (???)
Yamaha ???? ????
Pinnacle Micro $3995 ISO 9660 and HFS software for Macs

Kodak remarkets the Philips drive as their PCD Writer 200.

Pinnacle Micro announced at MacWorld Expo in San Francisco a new,
recordable CD-ROM drive with a list price of $3,995! This price
includes ISO 9660 and HFS software for Macs. PC interface kit and
software is extra $200.

Here are some phone numbers you can call for more info:

JVC Product Information: +1 714 965-2610
Philips Consumer Electronics: +1 615 475-8869
Sony Computer Peripheral Products: 1 800 352-7669
Pinnacle Micro 1 800 553-7070, +1-714-727-1913 (fax)

You can buy the Philips drive with CDGEN software for ISO-9660
discs from DataDisc (1-800-328-2347, FAX: +1 703-347-9085) for $7895.
They recommend that you use it with the Adaptec 1542 SCSI Card.

Optical Media International (1-408-376-3511, omi@applelink.apple.com)
has Macintosh HFS premastering software for the Philips CDD-521. The
program is called "Quicktopics" and the cost is $2500.

The JVC drive comes with software for making ISO-9960, Apple HFS, and
hybrid ISO-9660/HFS discs. [If anyone knows anything more about these
hybrid discs, please let me and I will include the information here.]

Additional third party integrators are: Meridian Data 408-438-3100;
CD-ROM Strategies 714-733-3378; and Interactive Support Group 818-709-7387.

Here is a list of software vendors

CD-ROM Strategies CD-GEN 1 714 733-3378
DataDisc CD-Gen 1 800 328-2347
Dataware Technologies, Inc. CD Make 1 510 942-3111

There are several usenet groups dedicated to CDROM publishing:
comp.publish.cdrom.hardware
comp.publish.cdrom.software
comp.publish.cdrom.multimedia
==========
13. Where can I get blank media for my CD-ROM recorder?

The blank discs for CD Recorders are not the same as a normal CD. The metal data surface is gold instead of aluminum. The recorder uses a high powered laser to modify a dye layer which is between the gold and the plastic. This dye is somewhat photo sensitive so write once CDs should be stored in a dark place. They should be stored in an area that does not rise above 40 Celsius (104 F). It takes about half an hour to burn each disc.

The blanks come in two sizes. 63 minute, and 74 minute. The time refers to the amount of digital audio that can be recorded. Since DA is read from the discs at a constant rate of 150 kb/sec, it is easy to calculate the amount of data they will hold. The 63' discs will hold about 580 meg, and the 74' discs will hold about 660 meg.

Here are several sources for blank discs:

Laser Resources sells Mitsui Toatsu CD-R blanks at pretty cheap prices:

1-9 10-99 100-999 1000+
63' $18 $17.50 $16.50 call
74' $20 $18.50 $17.50 call

Phone +1-310-324-4444x16, ask for Mike.

DataDisc (1-800-328-2347, 1-703-347-9085 FAX). 74 minute $27 quantity 10.
63 minute $19 quantity 25.

The One-Off CD Shop MidSouth, Inc.
109-C Jefferson Street N
Huntsville, AL 35801
(205) 534-3050 FAX (205) 539-9238
QTY CD-R 63 CD-R 74
1-9 $23.00 $25.00
10-49 $22.75 $24.75
50-99 $22.50 $24.50
100-499 $20.75 $22.75
500+ $19.50 $21.50

DataWare (1-510-942-3111, ask for Jeff Caplan). 74 minute (650 meg) blanks

for $31 quantity ten, $29 quantity 100, and $27 quantity 500.

Sonic Solutions 415-485-4800. Their April 1992 price list shows CD-R74
quantity 100 as $27.50, CD-R63 quantity 100 as $25.00.

The U.S. sales office for DIC (a Japanese ink and chemical company) can
be reached at 201-224-9344. DIC claims a useful life in excess of
75 years for their discs.

APDC sells blanks discs, magneto-optical disks, 8mm and 4mm tapes.
800-522-7232, ask for Susan Bradley.

Kodak also sells them. Call 800-242-2424. Prices aren't very good for
small quantities, but they are a pretty good deal if you buy in bulk.

Mitsui Toatsu: The product name for their disks is Airy. Their
advertising literature claims that the accelerated aging tests
indicate a life of up to 240 years assuming storage at 25C. The Warranty
on the jewel case is for 1 year from date of purchase.

Japan 03-3592-4774
United States 212-867-6330
Germany 211-320458
U.K. 71-976-1180
==========
14. I have 10000 paper documents that I want to put on a CD-ROM. Who can help?

There are several companies that will do large scale scanning, OCRing,
and data entry.

Compact Disc Services Inc.
1821 Saratoga Ave.
Saratoga, CA 95070
(408) 741-4770, (408) 867-0518 FAX, cdsi@netcom.com

Will do very large scale scanning, OCRing, and data entry and modification.
Also scanning in the graphics and doing cutting and pasting on almost each
page. They can handle 10000 pages per week.

Agro Computer Systems can process several thousand pages a day,
and claims an error rate of less than 10E-6. The standard price is 55
cents per 1000 characters, or $550 per megabyte. For more information
contact
Mr. G. M. Mahindra
Agro Computer Systems

==========

15. Are there any organizations of CD-ROM Publishers?

The Optical Publishing Association is a non-profit trade and professional organization for CDROM and other digital media publishers. They have been around since 1988, publishing newsletters and backgrounders for publishers, and promoting profitable practices for the business.

OPA, PO Box 21268, Columbus OH 43221 USA, 614/442-8805, 614/442-8815 (fax)
CIS address 71333,1114, 71333.1114@compuserve.com, AppleLink r.bowers.

==========
16. Where can I get more information about CD-ROM publishing?

Subscribe to CD-ROM Professional Magazine, 1 800 248-8466, $39.95/year

There is a mailing list devoted to CD-ROM publishing. For more information send a message to Mail-Server@knex.via.mind.org with the word "HELP" in the body of the email text.

There are several files pertaining to CD-ROM publishing available for anonymous ftp from ftp.cdrom.com.
==========
17. How much information will fit on a CD-ROM?

It depends on the drive. Almost all CD-ROM drives will handle up to 620 megabytes with no problems. Many newer drives can read discs with over 700 megs.

The CD-ROM Users Group (see above) has a diagnostic CD-ROM that will tell you how much information your drive can handle.

==========
18. Why doesn't MSCDEX work with DOS 5.0?

You must use SETVER with MS-DOS 5.0, to make MSCDEX 2.20 work properly. Otherwise you will get an incorrect DOS version message. See the MS-DOS 5.0 documentation on how to use SETVER. MSCDEX 2.21 works with MS-DOS 5.0 without SETVER.
==========
19. Where can I get the latest version of MSCDEX?

Call MS BBS at 206-936-4082. Choose F for file library, S UPDATES, F to list files, then D MSCDEX.ZIP to download the file. (Microsoft may have deleted this file.)

You can get the latest version of MSCDEX (2.21) in a self-extracting zip archive via anonymous ftp from ftp.cdrom.com:/cdrom/cdext.exe.

It is also available in the MSL library on CompuServe, as CDEXT.EXE.
==========
20. I bought a used drive at a garage sale. Where can I find a driver for it?

Many CD-ROM manufacturers maintain BBS's where you might be able to find drivers for their drives:

NEC BBS: +1 508 635-6328
Philips BBS: +1 310 532-6436
Sony BBS: +1 408 955-5107
Pioneer: +1 408 748 2105 (9600/HST/8N1)

==========

21. What is the difference between `High Sierra' and ISO-9660?

Not much. When the standard was first proposed, it was given the name "High Sierra'. Later it was adopted as an offical standard, with a few minor modifications, and was designated ISO-9660. Usually when someone says "High Sierra", they really mean ISO-9660.

You can get a copy of the High Sierra Spec from the author for $30.

Howard Kaikow
65 Spring Cove Road
PO Box 1333
Nashua, NH 03061-1333
USA
voice: +1 603 889 8616
fax: +1 603 880 1319
email: kaikow@standards.com

Howard is also the principal author of ISO-9660. He is available for consulting.

==========

22. Where can I get a copy of the ISO-9660 standard?

You can order a copy of the ISO-9660 standard from

ANSI
Attn: Sales
11 West 42nd Street
New York, NY 10036
212-642-4900

Cost to US destinations is $50, plus $6 shipping. They now accept Visa/MC orders over the phone.

Another source of a wide variety of standards documents is Global Engineering. Their service is often faster than ANSI, but they charge more ($104 for ISO-9660). They also have offices in Europe and Asia.

Global Engineering Documents
15 Inverness Way East
Englewood, CO 80112-5704
(800) 854-7179 (same)
(303) 792-2181
fax (303) 792-2192

ISO standards may be purchased from a country's national standards body. In the USA, this is ANSI, in the UK it is BSI (British Standards Institute in London), in Switzerland, SNV (in Zurich), DIN in Germany, AFNOR in France, JSA in Japan, etc.

==========

23. What is an HFS disc?

HFS is the Macintosh's Hierarchical Filing System. It is unrelated to High Sierra and ISO-9660 formats. Most CD-ROMs intended for the Macintosh are created in the HFS format, since HFS does support the Mac's resource and data forks and file information.

There are drivers made by AsimWare (AsimCDFS) and Xetec that allows HFS discs to be read on an Amiga. There is a list of differences that the drivers contends with, such as non-standard characters and 32 character filenames (Amiga supports only 30).

"New Inside Macintosh: Files" published by Addison-Wesley, has the most complete description of HFS format.

Inside Macintosh: Files
By Apple Computer, Inc.
Addison-Wesley Publishing Company
ISBN 0-201-63244-6

In Chapter 2, the section on "Data Organization on Volumes" pages 2-52 to 2-76 contains as complete a description of HFS as is available.

This book can be ordered from APDA (Apple Programmers & Developers Association) or any bookstore.

==========

24. Can you give a short explaination of ISO-9660?

ISO-9660 is an international standard that defines a filesystem for CD-ROMs. Almost all systems support ISO-9660.

Level one ISO-9660 is similar to an MS-DOS filesystem. Filenames are limited to eight single-case characters, a dot, and a three character extension. Filenames cannot contain special characters, (no hyphens, tildes, equals, or pluses). Only single case letters, numbers, and underscores. Directory names cannot have the three digit extension, just eight single-case characters.

All alphabetics are in UPPER case; some software maps this to lower case. Either the file name or the extension may be empty, but not both ("F." and ".E" are both legal file names).

There is a "File Version Number" which can range from 1-32767, and is separated from the extension by a semi-colon. The file version number is ignored on many systems.

Here are some examples of legal and illegal filenames:

Legal Illegal Why
TEST_1C.TXT TEST-1C.TXT hyphen
TEST1C.TXT TEST 1C.TXT space
TEST.1C TEST.1C.TXT more than 1 period
README Readme not single case

Subdirectories are allowed to nest up to eight levels deep.

Level two ISO-9660 allows longer filenames, up to 32 characters. But many of the other restrictions still apply. Level two discs are not usable on some systems, particularly MS-DOS.

==========
25. What the heck does `Red Book', `Yellow Book', etc. mean?

"Red Book" is the common name of the "Compact Disc Digital Audio Standard". When a disc conforms to the red book standard, it will usually have "digital audio" printed below the "disc" logo. Most music CDs conform to this standard.

"Yellow Book" is the standard for CD-ROM. When a disc conforms to the yellow book, it will usually say "data storage" beneath the "disc" logo.

"Green Book" is the CD-I (compact disc interactive) standard.

"Orange Book" is the standard for write-once compact discs.

"Blue Book" is the standard for LaserDisc. **

You can get the Red Book and Yellow Book from

ANSI
Attn: Sales
1430 Broadway
New York, NY 10018
(212) 642-4900

Red Book: CEI IEC 908
Yellow Book: ISO 10149:1989

You can get the Green Book from

American CD-I Association
11111 Santa Monica, Suite 750
Los Angeles, CA 90025
(213) 444-6619

The Orange Book is still proprietary to Philips and Sony, and available
only to their licensees.

[If anyone can tell me where the other standards are available, I will
include that information here.]

** ["Blue Book" may be apochryphal. Pioneer reportly has a pre-mastering
guide that may or may not have a blue cover, but it is not a statement
of the LD standard.

The only standards found so far are IEC-857 (NTSC) or IEC-856 (PAL).
In the US, the only reliable source for these is Global Engr Documents.
They aren't cheap.

'857 only covers the analog portions of LD. It does not include
digital audio, TOC, LD-ROM, LD+G, CDV-5 or anything peculiar to
Laser Karaoke.]

==========
26. What is CD-I?

CD-I means "Compact Disc Interactive". It is meant to provide a standard
platform for mass consumer interactive multimedia applications. So it is
more akin to CD-DA, in that it is a full specification for both the
data/code _and_ standalone playback hardware: a CD-I player has a CPU,
RAM, ROM, OS, and audio/video/(MPEG) decoders built into it. Portable
players add an LCD screen and speakers/phonejacks.

If you want information about Philips CD-I products, you can call these
numbers:
US: Consumer hotline: 800-845-7301
For nearest store: 800-223-7772
Developers hotline: 800-234-5484

UK: Philips CD-I hotline: 0800-885-885

"Discovering CD-I" is a book available for $45 from:

"Discovering CD-I"
Microware Systems Corporation
1900 NW 114th Street
Des Moines, IA 50325-7077
1-800-475-9000

There are three books by Philips IMS and published by Addison Wesley:
"Introducing CD-I" ISBN 0-201-62748-5
"The CD-I Production Handbook" ISBN 0-201-62750-7
"The CD-I Design Handbook" ISBN 0-201-62749-3

Lex van Sonderen periodically posts a CD-I FAQ to comp.multimedia. The
latest version of this FAQ is available by anonymous ftp from
ftp.cdrom.com: /cdrom/cdi.faq.
==========
27. What is CD-ROM/XA?

CD-ROM/XA is an extension to the Yellow Book Standard. A track on
a CD-ROM/XA disc can contain computer data, compressed audio data,
and video/picture data. Many CD-ROM drives do not support CD-ROM/XA.

CD-ROM/XA extends CD-ROM by adding some of the CD-I disc features (such
as using Mode 2 tracks with interleaved compressed-audio and other data).
Thus CD-ROM/XA (eXtended Architecture) is often called the "Bridge" format
between CD-ROM and CD-I... though the relationship is mostly the sector
types. CD-ROM/XA applications still require specific code for each target
platform.

CDROM-XA specifies a `bridge format' so that a CDROM-XA disc can be read
on a CD-I player as well as on a PC under MSCDEX (provided that you use
a conforming (.SYS) driver. On a normal yellow-book CDROM, a data track
contains only mode-1 data sectors. On a CDROM-XA, a (the) data track
contains only mode-2 data sectors. A mode-2 sector can be of two formats,
form-1 and form-2. A form-1 sector contains 2048 bytes of user data,
together with EDC and ECC bytes. A form-2 sector contains 2324 bytes of
raw data (e.g. ADPCM audio or video data). If the device driver delivers
2048 bytes of data when MSCDEX asks for it, regardless whether the sector
is mode-1 or mode-2/form-1, the PC is CDROM-XA compatible.

==========
28. What are the Rock Ridge extensions?

The Rock Ridge extensions use some undefined fields in the ISO-9660 standard
to allow full unix-like filenames, symbolic links, and deep directories.

"Rock Ridge" is named after the town in the movie "Blazing Saddles" for no
particular reason.

The latest revision of the RRIP/SUSP is 1.10; the draft version of these
documents is available by e-mail from cdfsf@ymi.com or ftp at
ftp.cdrom.com (/pub/rockridge/new).

Any comments regarding the Rock Ridge or System Use Sharing Protocol
documents should be addressed to cdfsf@ymi.com.

For information on Rock Ridge at Sun, try rrinfo@Eng.Sun.COM or
cdgroup@fantasy.eng.sun.com.

For information on Unix-based premastering software supporting the Rock Ridge
extensions contact:

Young Minds Inc.
1910 Orange Tree Lane
Suite 300
Redlands, CA 92374
909 335-1350
909 798-0488 FAX
yngmnds!ayoung@ucrmath.ucr.edu

Rock Ridge is expected to be approved as an ISO standard during the first
quarter of 1993.

==========
28b. Which systems support Rock Ridge

OS Version
=== ====
SunOS 4.1.2
Linux 0.98
386BSD ???
NeXT 3.1
BSDI BSD/386 V0.9.3
SVR4.2

The "Version" is the first version that included support for R.R.
Please let me know any other systems that include R.R. support. I am
also interested in any plans to support R.R. in the near future.

Under Novell NetWare 3.11, Micro Design's SCSI Express (Version 1.3.0)
supports mounting Rock Ridge CD-ROMs as standard NetWare mountable
volumes. Then through NetWare NFS, any UNIX client can access the
CD-ROMs (including access to the RockRidge attributes). Also DOS, OS/2,
and MAC clients can access the same CD-ROMs.

==========
29. What is ECMA 168?

ECMA 168 is a volume and file format standard for write-once CD and CD-ROM.
It was approved as a European standard by the ECMA General Assembly in June
of 1992. It provides for full Orange Book functionality, including
multisession recording, track-at-once recording, and packet recording.
When used with an Orange Book writer, this will allow write-once CD to
be used more like a general-purpose storage peripheral than is possible
using ISO 9660. ECMA 168 also incorporates the functionality of Rock Ridge:
the ability to use Unix-style filenames, Unix permissions, and deep directory
hierarchies. Much thought was put into character set issues, and ECMA 168
accommodates multiple-byte character sets such as ISO 10646. Although
ECMA 168 is not upward-compatible with ISO 9660, it is possible to write
a "conformant disc" containing both sets of volume and file structures.
If such a disc is Yellow Book compatible (a CD-ROM or a CD-WO written
disc-at-once), it could be read on either an ISO 9660 system or an ECMA
168 system. There are many common elements between ECMA 168 and ECMA
167, which is a new standard intended primarily for WORM and erasable
optical disks. Hopefully this will encourage developers to support both
standards.

The title of the standard is "Volume and File Structure of Read-Only and
Write-Once Compact Disc Media for Information Interchange". This standard
expands upon the ISO-9660 CD-ROM standard.

At the current time, I do not know of any companies which support ECMA 168
in their products.

A new draft international standard on CD-ROM/CD-WO format:

ISO/IEC DIS 13490 Volume and File Structure of Read-only
and Write-once Compact Disc Media for Information Interchange

is currently undergoing letter ballot process and voting may
end at end of August, 1993.

DIS 13490 is also the ECMA Standard 168, which is derived from
the Frankfurt Group proposal. Copies of this draft standard
should be available at the ANSI or ECMA office.

DIS 13490 is designed to support both the CD-ROM (yellow book) and
CD-WO (orange book) conforming media. In addition, DIS 13490 removed
many unnecessary restrictions of ISO 9660, and is compatible
with ISO 9660 at the directory and file structures level.
DIS 13490 conforming discs can also be made to be read
by both ISO 9660 and DIS 13490 conforming receiving systems.

The ECMA 168 specification is available by anonymous ftp from
ftp.cdrom.com in the directory pub/cdrom/ecma168.

==========
30. Is a short technical introduction to these standards available?

The file ftp.apple.com(130.43.2.3): /pub/cd-rom/cd-rom.summary gives
a short techie introduction to compact disc technology.

There is a good short general article on CD-Rom and its's many
variations (CD-XA, CD-I, CDTV, PhotoCD) called MULTIMEDIA IN A MUDDLE
by Barry Fox in the New Scientist (London, ISSN# 0262-4079) vol. 131
no. 1787 (Sep 21, 1991) pp.35-38

There is a very good article by Bill and Lynne Jolitz "Inside the
ISO-9660 Filesystem Format" in the December 1992 Dr. Dobbs Journal.
Detailed source code examples are provided. They are planning followup
articles covering Rock Ridge, CDI and CDROM-XA.

The SAMS book "Principles of Digital Audio" by Ken C. Pohlmann (ISBN
0-672-22634-0) deals primarily with audio CDs but there are sections
dealing with CD-ROM, CD-I, DVI, CD-V, CD-WO, Erasable CD, CD + G and
CD + MIDI.

There is a good brief explaination of all these standards in the paper

"Compact Disc Terminology"
Nancy Klocko
Disc Manufacturing Inc.
1409 Foulk Road, Suite 202

Wilmington, DE 19803
1-800-433-DISC

Here is some information from the paper:

Standards:

Red Book == CD-Audio

Yellow Book == CD-ROM
Mode-1 is for computer data
Mode-2 is for compressed audio data and video/picture data

CD-ROM/XA == an EXTENSION to Yellow Book and defines a new type of track.

CD-ROM Mode 2, XA Format, is used for computer data, compressed audio data, and video/picture data. A CD-ROM / XA track may interleave Mode 2 compressed audio and Mode 2 data sectors. Additional hardware is needed to separate these when playing the disc. The hardware is programmed to separate the audio from the data, decompress the audio and play it out through the audio jacks. At the same time, the hardware passes the data to the computer.

NOTE: Additional hardware is needed to play a CD-ROM / XA disc. Several vendors offer an XA interface board that will allow an existing CD-ROM drive to play CD-ROM / XA discs.

Green Book == Compact Disc Interactive (CD-I)

Orange Book == Recordable Compact disc Standard
Part I - CD-MO (Magneto Optical)
Consists of optional Pre-Mastered (READ-ONLY) area and a Recordable (re-writable) user area.
Part II - CD-WO (Write Once)
Orange Book Part II also defines a second type of CD-WO disk called a "Hybrid Disc". This disc consists of a Pre-recorded Area and a Recordable Area. The Pre-recorded area is a READ ONLY area where the information is manufactured into the disc. (This area is written per the Red, Yellow, and Green Book specifications, and can be played on any CD-Player.) The Recordable areas are where additional recordings can be made in one or more sessions. Only the first session on the disc is readable by todays CD-Players; additional software will be needed to read the additional sessions.

A TOC (Table of Contents) is written during each recording session. Disc will have multiple TOCs, one for each recording session.

Photo-CD is an example of a "Hybrid Disc".

CD-Bridge Disc

The CD-Bridge Disc defines a way to add additional information in a CD-ROM / XA track in order to allow the track to be played on a CD-I player. the result is a disc that can be played on both a

CD-I player connected to a TV set and on a CD-ROM / XA player
connected to a computer.

An example of a CD-Bridge Disc is the new Photo-CD disc. The
Photo-CD disc will be playable in CD-I players, Kodak's Photo CD
players and in computers using CD-ROM/XA drives.

Photo-CD
The Photo CDs will be Mode 2 Form 1 sectors per the CD-ROM / XA
specifications. The disc will be written per the Orange Book Part
II "Hybrid Disc" specifications. This will allow photographs to be
written to the disc in several different sessions. Additionally,
the disc will use the CD-Bridge disc format to allow the disc to be
readable by both CD-I and CD-ROM / XA players.

The photographs written to the disc in the first session will use
the ISO 9660 format. These photographs will be readable with the
existing CD-ROM / XA players connected to a computer running new
software written for the Photo CD picture structure. Additionally,
the photographs will be displayable on CD-I Players and Photo CD
Players connected to a TV set.

Photographs written to disc after the first session will be
displayable on CD-I Players and Photo CD players. New software
and/or firmware will be needed to read these additional photographs
with existing CD-ROM/XA players.

==========
31. Who comes up with these standards? Can I have any input to the process?

In the case of the colored books, they have been developed by engineers
within Philips and Sony. Few people outside these companies have input into
the process.

The file format standards (ISO 9660, Rock Ridge, and ECMA 168) have all
been developed originally by ad-hoc groups of interested people from
various companies in the industry, then have been submitted to established
standards organizations (ECMA, ANSI, ISO) for further work there.

The CD-ROM Architecture Working Group is an official Standards working
Group under the auspices of the IEEE Computer Society by way of the
Standards Committee for Optical Disks and Multimedia Platforms (SCODMP)
chaired and sponsored by Dr. Lawrence Welsch, PhD. Mike Rubinfeld is
presently the Chair of the working group. They are working in accordance
with a Project Authorization Request (PAR) for the development of a CD-ROM
architecture profile that hopefully will be made into an international
standard. The PAR was approved by the Standards Activity Board (SAB) of
the IEEE/CS last June and the Architecture Profile will probably be ready
for balloting by August, 1993.

For more information, contact:

Mike Rubinfeld
NIST
Bldg. 225, MS:B266
Gaithersburg, MD 20899
(301) 975-3064
Email: miker@mml.ncsl.nist.gov
==========
32. Are there any ftp sites with good stuff related to CD-ROMs?

A couple of sites with cdrom related stuff are

ftp.cdrom.com (192.153.46.2): /cdrom [This site is maintained by me.]
Get the file cdrom/README for a list of files.

cs.uwp.edu (131.210.1.4): /pub/cdrom

==========
33. How do I write an MSDOS program that can access a cdrom using MSCDEX?

The MSCDEX interface documentation is available on the Microsoft Programmer's Library CD-ROM. This also has detailed specifications for drivers that talk to MSCDEX. It even provides solutions to a number of sticky problems.

The file mscdex21.zip contains Microsoft's info on how to talk to the CD-ROM extensions (MSCDEX.EXE) and a sample DOS application which is crude but effective in playing audio tracks. This file is available via anonymous ftp from ftp.cica.indiana.edu:/pub/pc/win3/uploads/mscdex21.zip or cdrom.com:/cdrom/mscdex21.zip.

MSCDEX programming information can be found in INTER31?.ZIP. Ralf Brown's interrupt bible. The information is very complete. The interrupt list is available via anonymous ftp from Simtel20 (wsmr-simtel20.army.mil) or from the mirror site wuarchive.wustl.edu: /mirrors/msdos/info/inter31?.zip.

There is a book by Ray Duncan (Microsoft Press) detailing all extensions to Dos (XMS, LIM EMS, MSCDEX etc..) which should be available in book stores. The title is "MS-DOS EXTENSIONS" ISBN 1-55615-212-4.
==========
34. How do I mount an ISO-9660 disc on a Sun?

Su to root and run this command,
mount -r -t hsfs /dev/sr0 /cdrom
or even better, put the following line in your /etc/fstab
/dev/sr0 /cdrom hsfs ro 0 0
and then run
mount /cdrom

Don Trimmer, of Delta Microsystems, has written a program that allows safe mount/umount operations without requiring super user permissions. You can get his program by anonymous ftp from cdrom.com:/cdrom/mount.c
==========
35. How do I use a cdrom with OS/2?

What you need to do to make your cdrom drive work under os/2 is:

1) make a bootable msdos floppy disk which is configured so that
you can use the cdrom after booting from this floppy.

2) copy the files fsaccess.sys and fsfilter.sys onto the floppy and
then add DEVICE= statements to the CONFIG.SYS for the floppy.

3) copy the floppy disk to the os/2 hard disk using the VDISK command.

4) create an icon with the "boot from drive" option set to the name
of the file created by the VDISK command.

5) Click on the icon.

OS/2 has builtin support for IBM drives, and for SCSI third party
drives. The Sony CDU 541 works well.

What you need to do if you don't have one of the supported drives, is
use the OS/2 command VMDISK to create a bootable "diskette image" on your
hard disk. On the diskette image file, you will copy a CONFIG.SYS file,
an AUTOEXEC.BAT, and the drivers you require for your CDROM. This feature
allows you use any driver with OS/2. The down side is that you can't
access the device in the image box from any OS/2 window. You have to use
the bootable image box to copy files back and forth between the image box
and any other. If you have one of the supported drives, you can access it
from any box.

The VMDISK technique is only needed for unsupported, mainly non-SCSI
drives. Some unsupported SCSI drives, such as the NEC CDR-84, work
fine with OS/2

The only thing to do in order to make some unsupported SCSI CD-ROM
drives work (as a data CD-ROM, MM is another problem) is to patch the
vendor ID string into \OS2\CDROM.SYS. Simply replace "TOSHIBA " by
"NEC ", etc. i.e. with blank-padding to eight characters. This is
known to work with NEC and SONY drives. It does not work with some
Matsushita (Panasonic) drives.

Systems Integration Technologies sells a Mitsumi CD-ROM Device Driver
for OS/2. The price is $10+S/H for text only, and $25+S/H for the
future enhanced driver. Contact joec@cybernet.cse.fau.edu or
cossette@holonet.net

==========
36. Which CD-ROM Drives will work with Microsoft(r) Windows NT(tm)?

This section of the Usenet alt.cd-rom FAQ lists the SCSI host adapters,
SCSI CD-ROM drives, and multimedia audio adapters which are supported by
Microsoft Windows NT. This information is a subset of the document
"Microsoft(r) Windows NT(tm) Beta March 1993 Hardware Compatibility List
Update"; the complete version of thie document is available on

Compuserve, in either WinNT forum library #1 or MSWin32 library #17.

These adapters and peripherals have passed Windows NT compatibility testing as of May 1993. This list is a subset of the hardware we expect to support in the final product and was current at the time it was published. If your hardware is not listed below, contact your hardware manufacturer for more information. We have not tested every computer and/or device in all possible configurations.

While we have endeavored to supply as complete and accurate a list as possible, MICROSOFT MAKES NO WARRANTIES, EXPRESS OR IMPLIED, AS TO THE COMPLETENESS AND ACCURACY OF THIS LIST. This list does not constitute an endorsement of any particular manufacturer.

Microsoft and BallPoint are registered trademarks, and Windows and Windows NT are trademarks of Microsoft Corporation. Other product names and trademarks are property of their respective owners.

SCSI(r) Host Adapters

The following SCSI adapters have been tested with the following drives (except as noted): CD Technologies CD Porta-Drive T-3301, NEC Intersect CDR-74, Micropolis 1924, Peripheral Land Infinity 88, ArchiveST 4000 DAT.

Adaptec(tm) AHA-1510
Adaptec AHA-1520
Adaptec AHA-1522
Adaptec AHA-1540B [2]
Adaptec AHA-1542B [2]

---

2 Tested with firmware revisions 3.10 and 3.20.
3 This adapter must be configured for 5 MB/second asynchronous I/O to work with listed CD-ROM drives from NEC.
4 This adapter must be configured for 5 MB/second asynchronous I/O to work with listed CD-ROM drives from Chinon, Hitachi and NEC.
5 Tested with Unisys PW2Advantage 3256 (Flemington).
6 To use this adapter, at least one device on the bus must provide termination power.
7 This adapter does not support 4mm DAT drives.
8 The Maynard SCSI Controller can be used as a general purpose SCSI controller for all tasks except CD Setup. To install Windows NT with this adapter, use the WINNT.EXE Setup method.
9 Tested with NCR System 3000 Model 3320 and Compaq Portable 486c.
10 The NCR System 3000 Model 3320 with this SCSI controller does not support tape backup.
11 Tested with NCR System 3000 Model 3350.
12 This adapter must be configured for asynchronous I/O to work with NEC Intersect CDR-73(M) and Pioneer DRM-600 CD-ROM drives.
13 This adapter is supported only on IRQ 5.
14 This adapter does not support tape drives.
15 Contact UltraStor for an upgrade if you encounter CD-ROM problems.
16 Contact UltraStor for an upgrade if you encounter tape drive problems.
17 The UltraStor 124f is a RAID controller. It supports hard drives and removable media drives only.
18 CD audio is not supported on this drive.
19 Soft (recoverable) errors may occur when used with Future Domain 8xx series adapters.
20 The Adaptec AHA-1640 only supports a single compact disc when used with this CD-ROM drive.
21 CD Audio is not supported on Sony CD-ROM drives when used with the Adaptec AHA-1640.
26 Supported in SoundBlaster 1.x emulation mode only.

27 The external MIDI connector on this adapter is not supported.
==========
37. How do I read an audio cd track as digital data?

Most CD-ROM drives cannot decode audio information. There are
firmware and data path reasons why it doesn't work. The drive
vendors could make drives that allow this feature.

There are only a few drives with the capability to read audio
tracks as data: The AppleCD 300 (which is a Sony 8003), the Sony
CDU-561 and the Toshiba 3401.

On a Macintosh you can put the CD into an Apple 300 CD-ROM, and using
QuickTime 1.6, record the music (at 44KHz) to your (hopefully very large)
hard drive as a QT soundtrack. At that point there are a number of tools
available to edit and massage the sound, and change the file format into
something else.

For the Toshiba drives, you issue a MODE SELECT command with density
code 0x82 and then all read's with an lba inside a digital audio track
will return 2352 bytes audio samples / block.

There are several ways to read digital audio from Sony CDU 561
and Sony CDU 8003 mechanisms. Note that the technique of merely
setting the density (0x82) using MODE SELECT SCSI command as on
Toshiba 3401s will not work.

Here are three ways to read digital audio Red Book standard
audio track data across the SCSI bus into your computer complete
with all sound processing already performed (For example the
CIRC routine already run and the output is LRLRLR pairs of 16
bit digital audio samples 2352 bytes per CD-ROM block.

Method 1 : READ CD-DA scsi command 0xD8

Byte 0: D8
1: <LUN stuff> 0
2: <4th most significant byte of logical block address>
3: <3rd byte>
4: <2nd>
5: <1st, lowest of the address>
6: <4th most significant byte of transfer length
7: <3rd byte>
8: <2nd>
9: <1st, lowest of the number of contiguos blocks to transfer>
10: <special sub code selector> (0 == normal 2352, other values
are 01, 02, 03)
11: <control>

Method 2 : READ CD-DA MSF scsi command 0xD9

byte 0: D9
1: <LUN stuff> 0

2: 0
3: <starting minute in binary not BCD>
4: <starting second in binary not BCD>
5: <starting frame (75th of a second) in binary not BCD>
6: 0
7: <ending minute in binary not BCD>
8: <ending second in binary not BCD>
9: <ending frame (75th of a second) in binary not BCD>
10: <special sub code selector> (0 == normal 2352 each, other
values are 01, 02, 03)
11: <control>

For this one you will need to remember how to convert MSF to
logical (LBA) address to set the SCSI transfer length correctly
to avoid the Mac SCSI manager reporting a phase error. to
calculate the number of bytes total you will get use the formula:

((Me-Ms)*60*75 + (Se-Ss) * 75 + (Fe-Fs)) * (2352)

Method 3 : MODE SELECT (6) 0x15

This is a very complex topic to discuss, but if you know how to
use the SCSI mode select page commands the third more direct
(and jitter filled) method to get digital audio across the SCSI
bus on the new SONY devices is to set the block length of the
volatile settings in the 6th 7th and 8th bytes of the Block
descriptor section of a MODE select list with 0 or more pages
(12 bytes for none) to a setting of either 2352, 2368, or 2448.
You want 2352, but I have not tried this technique and Sony
recommends the special streaming commands.

WARNING: for high quality use large transfers but QUICKLY
reissue another command as soon as a command is completed. The
head must never come to a rest for 100% pure results.

The format of a CD-DA sector, that the Toshiba XM-3401 returns, is not
too complicated: each sector contains 2352 bytes, these are devided
into 588 16-bit signed stereo samples of 4 bytes each. The 16-bit
samples are returned in 'low byte first' (i386, ...) byte order. The
16-bit samples in the sector are intended alternating for the left and
right channel, starting with the left channel.

```
struct cdda_sector {
struct cdda_sample {
char left_channel_lsb;
char left_channel_msb;
char right_channel_lsb;
char right_channel_msb;
} samples[588];
};
```

If you want to do low-level SCSI programming, call Lee Wagner of
Toshiba at (714)583-3125. The document is entitled "Toshiba CD-ROM,
SCSI-2 Interface Specifications, Ver. 6.0, Issued Jul., 1992". It is
currently free to developers. Note that this is *extremely* technical
material, and won't be useful to the average user.

==========
38. Why do CD-ROMs cost so much?

Here are several answers, take your pick:

A. Because too many people are willing to pay the high prices.

B. They are not really very expensive when you consider how much data
they contain. Even the most expensive CD-ROMs are often cheaper
than the least expensive floppies when you figure the cost per byte.

C. Because there isn't enough competition. The prices will come down
when more people buy drives, and more CD-ROM titles are available.
==========
39. Why do all the bundle deals require me to buy a drive? What if I
already have a drive?

Many disc producers sell outdated or surplus discs at steep discounts
to be bundled with new drives. The theory is that the new drive owner
will find the discs useful, and order the latest version at full price.

There are some bundle deals that do not require you to buy a new drive.
For instance, the CD-ROM User's Group (see above) has a bundle of ten
discs for $99.

==========
40. Are alt.cd-rom archives available anywhere?

I don't know if there is an ftp site anywhere that archives alt.cd-rom,
but you can retrieve old articles via email:

For a list of files available, send the message
INDEX CDROM-L
as the first line of your e-mail message to:
LISTSERV@UCCVMA.BITNET
or the Internet form of address:
LISTSERV@UCCVMA.UCOP.EDU

To retrieve an archived message, send the e-mail message
GET CDROM-L LOGyymm
or SENDME CDROM-L LOGyymm as above
where yymm is the year and month of the archive wanted.
e.g. LOG9110 = Log of October 91 messages.

==========
41. What is the shelf-life of a CD-ROM?

If a CD-ROM is not manufactured properly, the lifetime can be very short, perhaps only a few years. This can happen if the edge of the disc is not properly sealed, and oxygen reaches the metal surface.

If the disc is manufactured properly, it will last a very long time. Most CD-ROMs should last for more than a human lifetime.

Philips has proposed new standards for testing CD-ROMs that are expected to result in discs that will enjoy a life span of more than a thousand years. For more information see Fox, Barry "CD Makers Perform in Unison to Stop the Rot" New Scientist 134(1815) (April 4, 1992):19.

The laser used in a CD-ROM drive is very low power, and does not harm the disc in any way. Reading the disc will not shorten the lifetime.

==========

42. How should I handle my CD-ROMs? How do I clean them?

The following guidelines represent the current thinking for the care and handling of CD-ROM discs, by a number of CD-ROM disc and drive manufacturers. The validity and usefulness of most of these guidelines have not been substantiated by government testing and therefore are presented for information only.

Wash your hands before contact with the disc. If available, wear lint-free cloth gloves, finger cots, or talc-free latex gloves.

If you must wipe the disc, do so with a soft, dry, lint-free cloth in a radial motion- that is from the inner to the outer hub- not in a circular motion around the disc like you might do for a phonograph record. The most devastating scratches are those which occur along a circular arc of the disc which can obscure a long stream of pits.

Certain cleaning agents and solvents can damage the discs. Some of these include: gasoline, paint thinners, benzine, acetone, carbon tetrachloride, chlorinated cleaning solvents, ammonia, and household detergents which contain ammonia. Do not clean with a water soaked cloth. The use of Isopropyl alcohol, the ingredient in many commercial CD cleaning products, as well as certain waxes and acrylic liquids, is still questionable.

Do not clean the label side of the disc.

Use of a CD-ROM caddy is highly recommended during transport and operation. Limit the amount of physical contact with the disc.

Always handle the disc by the outer edge and/or the inner (hole) edge. Never touch the data surface.

Discs like to "live" in the same conditions that people do; that is:
They don't like to be manhandled
They don't like exposure to temperature extremes
They don't like exposure to excess humidity
They don't like exposure to high intensity UV light

Ron Kushnier, Chairman
Compact Disc- Reliability & Integrity of Media Working Group of
The Special Interest Group on CD-ROM Applications and Technology

==========

43. Which drives will work with Kodak Photo CD?

According to Kodak, the following drives are compatible. To view more than just the first recorded session, you need a multisession drive. Most of these drives are single session only.

Magnavox CDD461 - single session
CDD462RS - multi session
Sony CDU-6205 - single session
CDU-535 - single session
CDU-561 - multi session
NEC CDR-73 - single session
CDR-37 - single session
Apple CD 300 - multi session

The NEC CDR-74/84 works fine with PhotoCD. Older models that have a firmware revision of 1.0 should be sent back to NEC for a FREE refit, that upgrades the firmware to 1.0a, and may update some other components. NEC should be called at 1-(800)-388-8888 follow the recorded messages to get them to sent the info required for the refit (or hit 6 then 1 to get there instantly). You will get your drive back in 3-4 business days.

The Kodak Information Center is maintaining a file on the compuserve CDROM forum of compatible drives, and it has become quite extensive. They also specify compatible SCSI boards, drivers, and cable configurations. There are also a couple of subtle issues in compatibility that are still being worked out. For example, the NEC drives are single session compatible, but not multi. There are also drives which have been certified as compatible which are not XA, and there is some indication that this makes them useful for pictures alone, but not for mixed media Photo-CD productions in the future.

==========

44. What is a multisession CD drive?

A CD has an "index" area which contains track details; this is what is read when you first stick an audio CD into a player. Photo-CDs have a separate index area each time they are written (because it is impossible to "update" the index area). A multisession drive is one that knows to look for multiple index areas. The full details are contained in the Philips/Sony/Kodak "Orange Book" standard for writable CDs.

==========

45. How does Photo CD work?

In a nut shell, 35mm film (negative, slide, B&W, internegative) is scanned by an image scanner and transfered to XA-formatted CD-ROM discs. These discs are manufactured by burning (writing) -- not by pressing.

Each scanned image on the disc is kept in five resolutions. These five resolutions are called: Base/16, Base/4, Base, 4Base, and 16Base. As examples, Base/16 is one sixteenth the resolution of the "Base" image, and 16Base is sixteen times the resolution of "Base". (These are not simply larger picture elements. There are in increased number of scan lines.)

The 4Base and 16Base images are are compressed using Huffman encoding. You need the decompression software to pull the higher resolutions out of the image. You would typically need these higher resolutions if you want enlargements or if you intend to use an HDTV as a display device.

==========

46. Where can I get some information about the Kodak Photo CD?

To learn more about Photo CD products or other KODAK desktop color imaging products, contact Eastman Kodak Company at 1-800-242-2424 Ext 51 or 716-724-1021, ext. 53.

Or send inquiries to the following address:

EASTMAN KODAK COMPANY
Kodak Information Center
Dept. E. 343 State Street
Rochester, NY 14650-0811

Information about PhotoCD is available by anonymous ftp from cdrom.com:/cdrom/photo_cd.

There is an excellent article on PhotoCD in the Sept 92 issue of Photographic Magazine.

Eastman Kodak Co recently released Photo CD Access, which is designed to allow users to integrate CD images into any Windows or Macintosh Application. Requires a CD ROM XA (Extended Architecture) drive. Most popular image formats are supported, including TIFF, GIF, TARGA and PICT. Kodak sells the software directly. $39.95, 1-800-242-2424.

A developer's kit is available for $695 and includes source code as well as object for PC/MAC.

Dick Phillip's Photo-CD application for NeXTs is now loaded in the pub/next/submissions directory at sonata.cc.purdue.edu. The following files are available:

pCD0.3.4..README
pCD0.3.4.tar.compressed application
README.pCD
photo_cd.tar.Z test data - simulated photo-CD
photo_cd.tar.Z.README

The maximum resolution is 3072 X 2048, 24 bit color.

==========
47. Where can I get maps of the US on CD-ROM?

The USGS is producing a series of cds that contain 1:100,000 scale
digital line graph (DLG) data. Presently, only Florida is available.
Also, 1:2,000,000 DLG cd is available for the US. Call 1-800-USA-MAPS
for more info.

You can also get topo data (with AVHRR coverage) on CD-ROM for $32. This
is DEM (30" elevation data) for the whole US. Contact: EROS Data Center,
Sioux Falls, SD 605-594-6507, or 6511

The Digital Chart of the World (DCW), produced by your Defense Mapping
Agency, is generally acknowledged to be the best data set providing
world-wide coverage. It is at a scale of about 1:1 000 000, and it is
unlikely that you will find data at a larger scale for much of the world.
At $200.00 for the set of 4 CD-ROMs and viewing data, it is considered to
be a steal by most professional users, though it might be a bit of an
overkill for domestic use. You can obtain it from:

U S Geological Survey
Distribution Center
Building 810
Box 25286
Denver, CO 80225

==========
48. How do I put a CD-ROM Drive on a Novell network?

---
1. SCSI Express. SCSI drives only, NLM only.

2. OptiNet by OnLine in Germantown, MD. Both NLM and separate CD-Server.
Any type of drive supported. Up to 128 drives per server.

3. CD-Net by Meridian in Colorado. Software only version of the Meridian
CD-Server. Used to be limited to 21 drives, but may have been upgraded.
Not sure if NLM version is currently available.

Also, CBIS has a hardware/software solution that supports up to 21 drives
per server. No NLM.

All the packages run about $700 for 8 users or less.

[If anyone has used any of these products, and would like to recommend
yes or no, please let me know.]

Corel sell a SCSI driver package that include NLM's to put
worm drives,CD-Roms etc on a 3.1+ server. The package also includes dos
drivers for just about every device you would want to connect to SCSI.
Only costs about $70.

==========
49. Are any CD-ROM Jukeboxes available?

There is a Pioneer DRM600 CD-ROM jukebox. It will hold 6 CD's in a cartridge, costs around $900-$1000, but has a slow drive. Pioneer also has a new drive coming out in December that is the same 6-CD changer, but with a 340ms, 600K/Sec drive in it. That will be more like $1400.

It is available from:

Kintronics Computer Products
3 Westchester Plaza
Elmsford, NY 10523
914-347-2530 or 800-431-1658 attention Neal Allen

It is also distributed by Peripheral Solution, in Santa Cruz, 408-425-8280

A jukebox that handles 240 discs is available from

Kubik Technologies Ltd.
200-3900 Viking Way
Richmond, BC V6V 1V7
604-273-0400

There is a German firm called NSM that sells CD-jukeboxes for bars, etc. They have their fast 100-disk changer also available for consumer purposes and a CD-ROM version. In Holland it is sold by:

LaserMusic Nederland
Leeuwenstein 44
2627 AM Delft, the Netherlands.

The Lotus CD/Networker can have up to 28 CD-ROM drives installed in it. Lotus Development Corporation, 55 Cambridge Parkway, Cambridge, MA 02142.

Todd Enterprises has a box that can have up to 64 CD-ROM drives mounted.

Another jukebox is available from Microboards (MBi of America), 308 Broadway, PO Box 130, Carver MN 55315, 612/448-9800, 612/448-9806 (fax), contact Kathleen Davies
==========
50. Can I speed up my CD-ROM by using a cache?

There are several programs that cache information from the CD-ROM onto your hard disk. Since magnetic discs are often more than 10 times faster than a CD-ROM, this can result in dramatic improvements under some circumstances.

Most of the programs cache the directory information, so you can traverse subdirectories quickly. They also cache the most recently accessed blocks of data. So if you use the same files over and over, or access the same records in a database, your CD-ROM will seem much faster. But when you access the information for the first time, it will be just as slow as

ever.

SpeedCache+ from Future Systems has been recommended as a pretty good
caching program.

Future Systems, Inc
0420 South 500 East
Bluffton, IN 46714
(219) 824-4963

On the Macintosh a prescanning (Directory, file atrributes, icons, etc)
cache to accelerate the Mac with CD-ROMs exists from two companies
SpeedyCD 1.22 and FWB CD-ROM ToolKit 1.0. FWB seems much faster than
SpeedyCD and can prescan any type of CD-ROM volumes (ProDos, Mac HFS,
MS DOS, ISO9660, PhotoCD etc.) It prescans in the background.
==========
51. Do you have any info about the CD-ROM filesystems for Amigas?

The following information is taken from the Winter '93
"AC's Guide to the Commodre Amiga" (pages 112, 253, 262, 149)

AsimCDFS
This CD_ROM FIleSystem allows an Amiga/CDTV to access any ISO9660,
HighSierra, or Mac HFS formatted disc. CDTV discs also accessible.
Comes with FishMarket, a disc containing Fred Fish disks 1-637,
and AsimTunes, an intuition-based AudioCD controller program with
ARexx capability. Includes a manual and a painless install procedure.
Supports a number of CD-ROM drives. Requires SCSI controller
compatible with Commodore SCSI-Direct Standard. For 68000,010,020,
030,040 processors. Minimum 512K, more recommended for buffering.
AmigaDOS 1.3/2.0 compatible. $79.00
Asimware Innovations, 101 Country Club Dr,
Hamilton, Ontario L8K 5W4, Canada, (416) 578-
4916 FAX(416) 578-3966

CDx Disk Set
All software needed to attach a SCSI CD-ROM drive to most popular
SCSI controllers, plus a printed manual and two CD-ROM discs (Fish &
More Vols. I and II). Software consists of: CDxFileSystem for access
to ISO 9660, High Sierra, and Mac HFS discs, CDTV emulation software
to run most CDTV titles (1MB chip RAM recommended), audio CD player
software, an assembly/C/Arexx-compatible device for developers, and
more. NTSC/PAL compatible, Requires SCSI controller, SCSI CD-ROM drive.
AmigaDOS 2.0 compatible. $50.00
Xetec, Inc., 2804 Arnold Road, Salina, KS 67401,
(913) 827-0685, FAX(913) 827-6023

CDROM-FS
CDROM-FS version 702 enables Amiga owners to connect most SCSI CD ROM
drives to an Amiga with a SCSI interface. This software provides support
for industry standard ISO 9660/High Sierra format CD ROM discs. It comes

with clear concise instructions, making it easy to install and use.
Requires A590, A2091, A3000, Microbotics Hardframe or GVP. $49.95.
Canadian Prototype Replicas, P.O. Box 8, Breslau,
Ontario, Canada N0B 1M0, (519) 884-4412

==========
52. What are the most popular CD-ROMs?

Here are the hottest-selling CD-ROM titles in the USA in October, according
to PC Research. This is a good indication what Christmas sales were like.

10. CD Game Pack Software Toolworks
9. Where in the World is Carmen Sandiego Broderbund
8. Murmurs of the Earth Warner New Media
7. King's Quest V Sierra On-Line
6. Street Atlas USA Delorme
5. World View Brittanica
4. Sherlock Holmes, Detective Icom
3. Wing Commander / Secret Missions I & II Origin
2. Cinemania Microsoft
1. Battle Chess Enhanced CD-ROM Interplay

==========
53. What are some good references to CD-ROM reviews?

Drive reviews:

"PC-Computing" December 1992
"Macworld", October 1992
"PC-Computing", October 1992
"Computer Shopper", October 1992

CD-ROM LAN Server reviews:

"LAN Times", January 11, 1993
"PC Magazine", December 31, 1991

Jan Schwenk, the president and CEO of Resource International, runs a BBS
containing many CD-ROM reviews. The number is (817)-582-0672 at 8N1.
Admission is free.

==========
54. How do I put a CD-ROM Drive on a Ethernet by using a unix system
(e.g. a SUN) as a server and PCs as clients.

Edmund J. Sutcliffe <edmund@york.ac.uk> writes:
If you mount an ISO format CD-ROM on you sun using the commands previously
mentioned in Question 34 and export it to the network using
exportfs /cdrom
It is then made available for mounting using NFS to other devices.

The PC can mount the CD-ROM using any NFS Client including Sun's PC-NFS.
(This is the product we use) Most PC search software requires the presence

of MSCDEX to work with the CD-ROM. Daniel Churchman of Digital Solutions Pty Ltd, of Queensland Australia wrote a simplistic MSCDEX faker called MXSUB in May 1990 which they release under GNU Public License in January '92. This work well with early versions of the search software.Colin Ian King <cik@ukc.ac.uk> wrote a small quantitiy of C code which fakes the MSCDEX extensions required by many PC packages. He also produced a list of which search software used which MSCDEX functions. This code is released under GNU Public license and is available from ftp.york.ac.uk in /pub/cd-rom, via anonymous FTP. This faker can work with an Microsoft Compatible Network which can see CD-ROMs.

It is also necessary sometimes to set the volume label of the NFS mounted drive. "Malcolm E. Sherrington" <msherri@rpms.ac.uk> in an article in the proceeding of the UKUUG confernce of January '93 talks about the problems in doing this. He wrote a program call NFSLABEL to label PC-NFS mounted Network Drives. However, this code was slow to be release and Robert Turner <Robert.Turner@brunel.ac.uk> wrote similar code called LABELNFS which is available in source form. All this code is available from ftp.york.ac.uk in /pub/pc-nfs. This code has been sucessfully used with BRS/Search SilverPlatter and WilsonDisk search software.
The only CD-ROM search software which has been made available to me for testing purpose, on the Macintosh is SilverPlatters SPIRS. We have a GatorCS/Rack running GatorShare, an Apple Filing Protocol to NFS convert. (For more info mail support@cayman.com) This allows the Macs to see NFS file store as Appleshare Volumes. To mount CD-ROM to the Mac you must do the following:
1) mount the CD-ROM on a Mac using a local CD-ROM. This
will give you the Volume Name of the CD-ROM as seen to the Mac.
2) mount the CD-ROM on the NFS server.
3) Using GatorKeeper, the management software for GatorShare create a new AppleShare Volume called the same name as the volume when the CD-ROM was mounted locally.
This volume should mount the CD-ROM exported from the NFS server but the DESKTOP file should be create on some other section of NFS disk as it cannot be created on the CD-ROM. GatorKeeper will confirm the volume creation and then uses can mount the Volumes using the Chooser as usual. The user community can now mount the CD-ROM over the network to their Mac just like any other network volume and the SPIRS search software can us it. It is possible to Automate this mount and search software to make it transparent to the user and so limit usuage.

It should be noted that it is important to license approriately copies of the CD-ROMs before exporting them generally over the network. You might also want to restrict access to appropriate netgroups. Also license locking the search software satisfies certain companies, but not all.

==========
54. How do I read the UPC (universal product code?) from a CDROM?

The precense of the UPC on a CD is optional, although all the audio CDs have one. CDROMs might not have a UPC, however.

There's an MSCDEX function to get the UPC (int 2F, AX=0x1510,
CX=<CDROM drive letter>, ES:BX=<Addr Request Header> with the
request header filled with the IOCTL INPUT command 14 (get UPC)).
The MSCDEX documentation (chapters 10 and 11) will give you more
information.

==========
55. How do I Put a CD-ROM driver on the Ethernet by using a unix system as
a server and make it available to the PC and Mac.

Edmund J. Sutcliffe <edmund@york.ac.uk> writes:
If you mount an ISO format CD-ROM on you sun using the commands previously
mentioned in Question 34 and export it to the network using
exportfs /cdrom
It is then made available for mounting using NFS to other devices.

The PC can mount the CD-ROM using any NFS Client including Sun's PC-NFS.
(This is the product we use) Most PC search software requires the presence
of MSCDEX to work with the CD-ROM. Daniel Churchman of Digital Solutions
Pty Ltd, of Queensland Australia wrote a simplistic MSCDEX faker called
MXSUB in May 1990 which they release under GNU Public License in January '92.
This work well with early versions of the search software.Colin Ian King
<cik@ukc.ac.uk> wrote a small quantitiy of C code which fakes the MSCDEX
extensions required by many PC packages. He also produced a list of which
search software used which MSCDEX functions. This code is released under
GNU Public license and is available from ftp.york.ac.uk in /pub/cd-rom,
via anonymous FTP. This faker can work with an Microsoft Compatible Network
which can see CD-ROMs.

It is also necessary sometimes to set the volume label of the NFS mounted
drive. "Malcolm E. Sherrington" <msherri@rpms.ac.uk> in an article in the
proceeding of the UKUUG confernce of January '93 talks about the problems
in doing this. He wrote a program call NFSLABEL to label PC-NFS mounted
Network Drives. However, this code was slow to be release and Robert
Turner <Robert.Turner@brunel.ac.uk> wrote similar code called LABELNFS
which is available in source form. All this code is available from
ftp.york.ac.uk in /pub/pc-nfs. This code has been sucessfully used with
BRS/Search SilverPlatter and WilsonDisk search software.

The only CD-ROM search software which has been made available to me for
testing purpose, on the Macintosh is SilverPlatters SPIRS. We have a
GatorCS/Rack running GatorShare, an Apple Filing Protocol to NFS convert.
(For more info mail support@cayman.com) This allows the Macs to see NFS
file store as Appleshare Volumes. To mount CD-ROM to the Mac you must do
the following:
1) mount the CD-ROM on a Mac using a local CD-ROM. This
will give you the Volume Name of the CD-ROM as seen to the Mac.
2) mount the CD-ROM on the NFS server.
3) Using GatorKeeper, the management software for GatorShare create a
new AppleShare Volume called the same name as the volume when the
CD-ROM was mounted locally.
This volume should mount the CD-ROM exported from the NFS server but the
DESKTOP file should be create on some other section of NFS disk as it

cannot be created on the CD-ROM. GatorKeeper will confirm the volume
creation and then uses can mount the Volumes using the Chooser as usual.
The user community can now mount the CD-ROM over the network to their Mac
just like any other network volume and the SPIRS search software can us it.
It is possible to Automate this mount and search software to make it
transparent to the user and so limit usuage.

It should be noted that it is important to license approriately copies
of the CD-ROMs before exporting them generally over the network. You might
also want to restrict access to appropriate netgroups. Also license
locking the search software satisfies certain companies, but not all.

I hope the above is of use to you. I have been working on this problem
for 18 months on and off and finally I have got round to documenting it as
above. All the code mentions is Public Domain. If you wish to mirror it
please feel free as we only have limited Internet access. New updates
appear about every 2 or 3 months.

All you have to do is to comment out #define ONLY_SYMBOLS in sym-ld.c,
and you get a linker that links into a.out format. This define is
there because gdb needs the symbol table in a.out format, and
including the whole text and data section would be wasted space.

There's heaps about, Uniterm (free) or Connect (shareware) would be
the best 2 for that, both available by ftp, Connect is on
atari.archive.umich.edu in /atari/Telecom/
Uniterm is on chsun.chuug.ch in
/archive/software/atari/Uniterm/ read the read-me first.
That above site used to be the only one that had the latest version
(it's authors site), I don't know if it still exists there.

>Also I would like to know where I can FTP these programs from or where I can
>buy them. I almost forgot, do ATARI computers need special modems?

Nope... just buy any modem that you would for your own computer, the
Atari has an RS232-C serial port.

>(like Apple does)

I thought the only difference with the apple was the plug... so all you
need is a special cable (worth about US$10 - 15) with any old modem.
I know that's true for the mac.

BTW: Are you sure you can't make your sig any bigger? :-(

> Michael Steve jr.
>

I don't think you know how to use MSA at all, so Please don't blame MSA for what you are doing wrong, it works 100% for me...

Some MSA Files are in 2 parts, NOT 2 DISKS, the first part is for tracks 0-39 and the other for tracks 40-79 or greater, Please look at what its doing, its all in the Track display and from memory there is a Disk Info thing..

So 2 MSA Files end up as one extracted disk....!!!!

There are 2 other disk compacters that I know of Ultra is one and Chaos disk compacter is I think the other..

MSA 2.32 is very fast and Simple to use, Ultra has a manual track option that does not use the boot sector info, but is slower, but please use Ultra 1.1R, this is my patched version as it has a small bug that I patched, it would not extract/generate manual settings only Auto ones, one command byte was wrong in the code, I managed to find this with the aid of Raid the debuger...

Ultra 1.1r is on cs.tu-berlin.de /pub/atari/Archiver/ultra11r.lzh

There is GNU recode, which can convert between any of more than 100
character sets, including EBCDIC and the atari charset. It is
available from any GNU server.

2.5 is the latest as far as I know, there were no versions between
2.11 and 2.5.

There is support for Speedo, making it a must buy, IMHO of course.
Also, there are extra calls for 'off-screen bitmaps' -- a bit like
using MEMORY.SYS, except that any depth memory bitmap may be created,
not just monochrome.

>5. I now need to replace the Warp9 screen saver. Any suggestions?

|> documentation (I don't really want to have to ftp > 3M of tar.gz source
|> code from prep.ai.mit.edu)?

In the binary distribution (gdb36p4b.zoo), there is a file gdb.info, a
plain text file (with some control character), which is the infoized
version of gdb.texi. There are no ST specific descriptions inside, but
the only real difference between the Unix and the ST version is that
on the ST gdb cannot read the symbol table from the executable, but
uses a separate file made with sym-ld.

|> I'm working under MiNT 1.09, using GCC 2.4.5, MiNTlibs pl ~41, and I've

Yes, you can use the attach command to debug any process after telling
gdb which are the exec and symbol files. The only tricky part is to
attach to the process before it crashes...

|> The port is experiencing some problems; at this point, I just want
|> something like a function call dump when the app crashes. I'm getting

|> _fputc:
|> BUS ERROR

|> Those *mains would be in whatever order they're called in...

Use the backtrace command (can be abbrevated to bt).

|> Am I hoping for too much in gdb? I'm building with no optimisation, and
|> -g... do I need to do anything else to use gdb on the app?

You can also use -O, but *not* -fomit-frame-pointer. Make sure that
the symbol file is linked the same way as the exec file, e.g. by using

```
foo.sym: $(objs)
gcc -B/gnu/bin/sym- -o foo.sym $(objs)
^^^^^^^^ substitute the path to sym-ld here
```

in the Makefile.

2405. Kermit Speeds

Newsgroup: comp.sys.atari.st
Date: 1994-02-03 10:43:44 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1994Feb3.104344.20998@bradford.ac.uk>
Source record: 193558

I frequently use Kermit to transfer Binary files between the University Mainframe and my ST, over a 9600 baud direct link.

I have tried both GemKermit accessory and the Kermit which is built into UniTerm, but both give the same speed.

My problem is that I am getting an effective transfer rate of 0.4 Kb/Sec, whereas the 486 PC owner next door to me is getting over 1 Kb/Sec.

As far as I can tell, we have Kermit set up exactly the same way (e.g. packet size 1000), and I imagine that the speed of the processor has little to do with the overall transfer speed, so, does anyone have any ideas why I am operating so much more slowly?

Steve Taylor.

Not so fast, what about D=not A? That is logic. And you can do masking with
the B and C channels without any slowdown. You don't have to enable channels
to use them.

Cubase (not Qbase!) is not copy protected (as it requires the dongle
to run). Therefore, just format some disks and use the desktop copy (drag
the A icon onto the B icon).

It's a 286 so I don't think you'd like to run DOOM on that!!!

There should be a 486 version comming out shortly, you'll have to wait for that.

I have some Speedo fonts that originated from a PC CDROM of various PD. They are
also on a BBS and on CIX in the UK. There is a Courier, some variations on Swiss
& Dutch a different symbol font and a Century Schoolbook one.

Try saving the file in RTF format on the mac. Its probably in a menu called
Export. It can then be loaded directly into atari works or ported to Protext.

It even sets the right fonts.

I'd say it is complete fiction.

Just to get everyone worked up, I spoke to someone who works for an ST magazine. They have been told by Atari they intend making Falcons for another 6 months. That's not to say they will stop then, just that they *will* be making them for 6 months. Take it how you want.

With the new MTOS being delayed, the fact that ST/STe production has stopped and that Falcons have sold 35,000 wordlwide (same source as above), I would say Atari intend putting their computer operations on the backburner for some time if not permenantly. Just my opinion.

>of making the parent process run from the child process? (unsuspend it)?

This is currently still true due to having to keep MiNT able to run on a
68000 without a great slowdown caused by shadowing the processes, as Minix
does.

If MiNT were allowed to develop just for the 68030 with virtual address
spaces for each process then this would not be a problem.

There are just too many 68000 based machines out there for it to be
justified at the moment.

Good choice!
I'm the current developer in case you wondered. ;-)

>Anyone had any success with this program / am I doing something wrong/dim ?

Your problems have already been addressed by others, but you can also read
all about it in one of the supplied text files.
Version 4.2 of mgif (the latest released) has lots of command line options
you might like to try out.

>Any ideas ?

Well, if you're interested I could mail you (and of course anyone else) a copy
of mgif 4.4beta which has an incredible number of improvements over v4.2.
If memory serves me right, v4.2 could only display GIF:s and JPEG:s. In 4.4
this has been extended with TARGA and PPM, but there is also:

- a GEM interface with menu and dialogs (sorry no windows yet)
- even faster GIF loading with less memory usage
According to my tests mgif is faster than anything else on the Falcon!
(And the only assembly code in the whole program are a couple of lines
for the quick preview. The rest is gcc-compiled C!)
- full 24 bit support for all file types!
- dithering now in colour as well using the IJG F-S dithering routines.
- full support for all graphics modes on the Falcon and probably on the TT.
Yes, that includes colour!

etc, etc

Mgif 4.4 is not finished yet and a non-beta version will _not_ be available in
the near future, since I don't have much time for the development right now.
Still, if anyone would like to try it out, please email me.

Source record: 193576
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Yesterday evening, while I was working with 1ST Word plus, suddenly
my Mega Ste crashed. After that I pushed the reset button, but the
system refused to boot. After some attempts I now know the system halts
after loading GENERAL.CPX, which tries to switch the system from 8 to 16Mhz.
I also tried "speed_sw.prg" which does the same thing, but unfortunately
without luck. So it seems now the Mega Ste won't boot at/switch to 16Mhz.

Does anyone know what's the problem here? Is it the cache memory or something
else (16Mhz signal?) ?

>you'd have to port it to the Falcon. Your head would explode.

I don't think Ian meant that X should be rewritten in assembler
completely. The way I understand his posting is that if the X
sources are adapted to the Atari platform and someone decides
it's kinda sluggish, they could rewrite some time-critical parts
in assembly. That makes perfect sense to me.
I would certainly volunteer for helping with porting Unix
(whether BSD or Linux). However, given my limited knowledge about
OS programming, I'd have to depend on a project coordinator to
tell me what to do.

: it seems to me that it should run just fine at 25 MHz. If there's no way
I can't help you with this, I don't even know the T25.
: I can get it to work at 25 MHz, is there any way I can get it to use my
: math coprocessor? Or would I have to compile the sources myself for that?
There are two compiled versions of POVRay from Dirk Klemmt, Frankfurt,
Germany. First is POV21_ST.GTP, which is compiled for 68000 without math
coprocessor, second is POV21_TT.GTP which is compiled for 68030 with
math coprocessor. Both versions can be used with the POVShell, written by
the same author.

: And, while I'm on the subject, why, out of curiousity, is the executable a
: .GTP file? It doesn't use a menu, so I can't multitask it under Geneva,
: and it's not a TOS program, so I can't multitask it under MiNT.
GTP stands for Gem takes parameter. POVRay itself has no menus, all options
must be given in the command line. Or, use the Shell descibed above. If you
don't want POVRay to show the
image during the calculation, just rename it from .GTP to .TTP and use
the -d switch. This should work under MiNT.

POVRay2.1 with all files is available at ftp.tu-clausthal.de in the
directory /pub/atari/graphics/raytrace/

hope this helps,
Chris

>What exactly does TOS stand for? It's the Atari GUI, right? Or is that GEM?
>If so, what does GEM stand for? You'll have to excuse these basic questions.
>I'm not an Atari user, just a curious Amiga user.

I was told that TOS stands for Tramiel Operating System, Jack Tramiel being
a founder of Atari Corp. Perhaps is it just a french joke...?!?
Next question : Where did J. Tramiel came from ? Commodore ?

GEM stands for Graphic Environnement Manager, and it was already built before
Atari decided to use it. Who designed GEM ? Bell labs ? AT&T ? I don't remember

Source record: 193585

It was none other than Kevin J that wrote on the 26 Jan 94 that ,

KJ> 2. If you are flying under auto-pilot with time compression
at
KJ> max, and you fire your lazer; internal fuel tank runs out.

Laser's use fuel (in accelerated time a 1 second blast is the
equivalent
of firing them for hour's !)

KJ> 3. Assasination to do at some place, and he/she doesn't
show.

Life is like that sometimes :-)

KJ> 4. Bulletin board is corrupted with stockmarket items.

Yep ,accelerate time to midnite to get update. (generally this happen's
if
there is no Bulletin's posted)

KJ> 5. Not being able to keep mouse button down on 'repair hull
KJ> damage' and selling items eg robots via the bulletin board.
KJ> (who wants to have to buy a new mouse every few weeks!?)

Tsk ,not using an atari mouse are we :-) Tip here apparently is to
attach
the joystick to mouse port and select autofire ,only if you have the essentail
extension cables of course ....new port's are more expensive than a new mouse
!

KJ> 6. Auto-pilot never reaching destination (it is always a few
KJ> thousand km's away).

Never happen's here ? are you sure you are targetting the Station and not
some resident satelite ship or something ? You can tell if you get the 'target
out of range' message.

KJ> 7. Having to 'click' on the screen to make space stations etc to
KJ> appear, so that you can then set the auto-pilot.

annoying that one :-(

KJ> Thats all I can remember.
Well if it's any consolation these 'features' are present in a standard ST
aswell :-(

KJ> Will there be a Falcon version, with at least better sound (like the
KJ> AMIGA version), the sound is bloody awfull on the ST version!!

Sound's OK to me ,and anyway the AMIGA version is markedly slower and jerksome which for me is too high a price to pay for a few spot sound effect's.

JB> with the thing.
JB> I can get them to print out, but I don't know how to get Bold,
JB> Italics,
JB> and other such effects. Do I need separate printer drivers?
JB> Anybody know the solution here?

Yes you need to configure a seperate printer driver. For STWriter You can use
the default 'Config.txt' file and edit it as follow's for the printer specific
codes. Edit it WITH stwriter itself BTW and preserve the same
line
return's.

>Ofir ogal@cix.compulink.co.uk

Oh, c'mon and give us a break, Ofir. YOU know better than to make a statement like that.

If you want to say _why_ you think HiSoft is so much better than GFA BASIC, then please do so. But please don't start out by making global assumptions that "Program X is junk solely because it's written in GFA." That's a pretty damming statement coming from a frequent Atari journalist such as yourself.

I continue to use GFA 3.5 and 3.6 to this day and support ST, STe, TT and the Falcon. I prefer GFA over HiSoft's implementation but that's just *MY* personal opinion. Someone starting out should consider HiSoft because of their commitment of support to the Atari (sorely lacking at GFA Systemtechnik).

While GFA's memory handling is tricky, it's certainly not insurmountable (especially for non-MultiTOS apps). If GER2ENG does "nasty, nasty things on an ST" one should blame the programmer, not the programming environment.

There is a full demo version of Home Accounts 2 on atari.archive.umich.edu,
so you should be able to find out everything you need by playing with it.

I am thinking along the same lines, and have just about decided to purchase
Quicken for Mac (and run it with Spectre). My main reason is that MacinTax
and Quicken can talk to each other to make tax time less painful, something
I need to worry about now that I am out of starving-student stage.

Getting a Spectre GCR or 128 can really open a lot of doors for an ST system.
They are cheap ($150 on the net for a GCR w/ROMs is not uncommon), and give
you lots to play with.

Do you have your baud rate set to 19200? Are you using no parity (this is good, given that your remote terminal server can handle it)? What kind of data compression protocol does your modem negotiate with the remote host? To find this out, there is usually an S-Register one can set with an AT command that will report more information when connecting to a remote modem. Also, you can usually dial up, connect, go to command mode (with ~~~), and type an ATIx command (where x is some magic small integer out of the normal Hayes range, check your modem manual for details as this is totally vendor dependent) to see what kind of connection was negociated. All of these things can significantly effect throughput.

Finally, if you can get the sysadmin for the remote system to install a Zmodem implementation, get GSZRZ228.lzh and hack a quick macro in Uniterm to call it up. You will get much better performance than Kermit.

Some uploads to atari.archive.umich.edu (should be put in Newitems in a few days):

pt20s.lzh - Protracker ST, MOD file creator/player. Best I have found. Includes ST, STe, and TT versions of the binary.

conn245e.lzh - Connect version 2.45 English

38400bps.lzh - simple hardware mod for 38,400 baud serial

cyber.zip - some old, but really good Cybercad sequences, with player program. Included are the "Spinning Atari" and "Rotating Chain Ring" production demos from a bit Atari show of years gone by. If these don't sound familiar, get this file and check them out!

It'd have to be sold with something like NVDI wouldn't it? Otherwise,
it'd just be this nice 256 colour (or hey, go whole-hog and make it a
16-bit colour) blitter that doesn't do anything...

It's a pity there aren't more Falcons out there or it'd be a nifty
project for someone.

Having built/run POV-Ray on several platforms, there's no reason it
shouldn't have any problems running at any speed on any system. Perhaps
the compiler used to build your version makes code that's too dirty to
run successfully with a cache? Can you turn off the cache on your T25?
It _does_ have a cache, right?

A floating point unit would do MUCH MUCH better on something like this;
a 25Mhz '000 won't really make much of a difference.

Perhaps I should upload my un-messed-with 68000 TOS version built with
the MiNT libs...

umm actually they started production on the TT line again quite recently.
Guess that shoots that argument.

Diamond Back does have support for Flopticals I've used it extensively,
and backing up is a breeze from HD to Flopticals - quick and effective.
Also, it may take 20 minutes to format, but the disks come PREFORMATTED
so you don't have to, it takes a few seconds to partition and away you go.

I've uploaded cvtran20.zip to ftp.uni-kl.de.

I fixed all the GEM routines. Now it works very nice on the TT.
It should also work on any ST at any resolution up to 32768x32768,
although I wasn't able to test it.

P.S. The program translates text between the following languages:
German, French, English, Dutch, Italian, Spanish & Portuguese.

>home/game systems, esp. in Europe.
>

Actually, it would be a _major_ effort to put out an improved Falcon. The existing design isn't especially friendly to faster CPUs or wider buses. I don't know if the F040 that was allegedly designed over a year ago managed to get around the original design limitations, or if that's one of the reasons it never appeared. Atari wants to expand the capabilities of the Jaguar to the point that it can be a fancy home/game system. And, if they can sell enough of them as game machines, they'll have a sufficient customer base to build on when it comes time to make it a personal integrated media machine. (Which is what they originally wanted the Falcon to evolve into, by the way.)

Where this all leaves TOS is unknown. Atari UK/EUR has shown its willingness to license the OS for third party machines (the Medusa/Pandora and the Eagle), and I think we'll see a similar situation here in the US/CAN market. TOS may end up beyond where Atari would have taken it! (I'll refrain from making any cynical comments about where Atari would have taken it...)

Well yes you are using way outdated versions of Kermit..

Get the latest C-Kermit from A.A. called CKER189B, its come a long way from the ones you are using....

Its claimed that it can run as fast as Zmodem and there is talk that it can run faster...

: > like that if another package will deliver 57kbps zmodem and vt100
: > compatibility.

: Pick up a copy of Connect. Contained within are some references to hardware
: mods that will increase your serial speed without errors. Also, there is a
: file 38400.lzh on ftp.math.fsu.edu (192.12.122.28) that was recently posted
: here. It contains instructions for a very simple mod that will give you
: 38.4k on a regular ST. You might also be interested in gszrz228 (a GEM
: Zmodem that is really nice) and some Uniterm macros I hacked together for
: it (rzsz_mac.lzh).

: Connect has specific support for the hardware mods it mentions. Other
: programs will probably have 19200 mapped to 57600 baud, or some other hack.
: Connect is definitely worth a look. It is a fine program. The latest
: version is 2.45 on ftp.uni-kl.de.

: You failed to mention what kind of ST you have. This makes a difference!
: Incidentally, do you get 1932 on binary downloads? This is better than
: I have been able to get (I average around 1600CPS during binary downloads).

G'day

I would like to know if this hardware mod is needed/works on a Falcon030 4meg
I use Stalker3 - which I know can support 38,400 baud. If someone could tell
me how I can reach this speed I would be most appreciative! :)

Support for the Falcon here in Australia is very limited unfortunately :(

Thanks in anticipation!

>TIMEWORKS across the page.

It is a full working version - apart from thesaurus and dictionary - I
don't know about the modules. But, it's definately not crippled in any
way. It's also the version which works on the Falcon in mono mode. Looks
like a good stop-gap WP for people looking for something graphical but not
wanting to pay the big prices asked or, like yourself, waiting for a
Speedo compatible.

> Everyone: Get a copy of OXYD from your favourite site and buy The OXYD > Book.

> I play in TT-medium - it's BEAUTIFUL. Would be lovely on a Falcon > too (same rez).

OXYD has been released in a new payware version just slightly more expensive than the Book (app. 45 USD) which saves looking up and typing in the codes for the "blocking stones".

It's called OXYD magnum and is available for PC, MAC, Atari Mono (incl. TTM 194), Atari colour (ST low res.), Atari TT/Falcon (VGA colour) and AMIGA.

Servus,
Siegfried

2460. HD _OUT_ of Mega STE?

Newsgroup: comp.sys.atari.st
Date: 1994-02-05 14:49:13 UTC
From: rrice@netnews.upenn.edu
Message-ID: <2j0bl9$ifm@netnews.upenn.edu>
Source record: 193487

Does anybody know...

How I could connect an IBM-style EXTERNAL 3.5" HD floppy to my Mega 4 STE, TOS 2.6'ed, AJAX was and is here (B^)), and the internal 1.44 is working just fine, thank you.

The reason being that these little suckers are getting cheap enough so that I could replace my old SF314 (or maybe just the guts??) with one, if I could connect it, and speed up my hard drive back-ups and my disk-to-disk copies. Could I go in through the Mega STE's floppy port? I installed the new internal and TOS by myself, but I'd be nervous about getting much more extravagant than that.

Thanks for even reading...

Rob S. Rice
rrice@mail.sas.upenn.edu

2461. CO-Processor IN Mega STE?

Newsgroup: comp.sys.atari.st

A fave terminal program of mine, at the moment is TeddyTerm
v2.10,
with is on archive.umich.edu (TTERM210.ZIP)

Here's some info...

Teddy-TERM v2.10 - Now with ANSI!
Teddy-TERM v2.10 - A complete communications terminal for the Atari ST,
STE,
TT & Falcon030. Now supports full 16 colour ANSI (in minimum 16 colour
640x200
screen modes) with intelligent ST med/high rez ANSI compatability. Simple
cost
calculating tables allowing Teddy-TERM to automatically estimate the cost
of
your online session. Many bug fixes since the previous version (v2.00).

Cheers,

>me how I can reach this speed I would be most appreciative! :)

A Falcon can support links between your modem and computer of some improbable number... I use 57.6KBaud in Connect... however, this won't help your actual connection speed to an online system at all. Just make sure you link at a minimum of 38,400 (this is surely supported in STalker?) and everything'll be as fast as possible. This is true for modems going up to v32bis (ie 14.4Kbaud) - but for V.FAST modems you're going to need 57.6Kbaud minimum.

Connect is highly compatible (so it says) with the latest HSMODEM patch - this is a system which replaces most of the serial port routines to make them much faster (versions in the archive for the Falcon, normal Atari and various hardware mods). Again, there is no real advantage (that i'm aware of) to using HSMODEM unless you are running under a multi-tasking OS of some kind. There are reports that using HSMODEM in the developer's version of MTOS results in little or no speed loss during multi-tasked data transfers.

2465. RE: Doom on a Falcon ?

Newsgroup: comp.sys.atari.st
Date: 1994-02-05 16:23:06 UTC
From: carrere@galaxie.int-evry.fr
Message-ID: <2j0h5a$dt3@reseau.cict.fr>
Source record: 193489

I do not intent to be pessimistic, but the guy who works on 'Des lasers et des hommes' have started to use the DSP. Now it is twice as speed as before, but thinking of a Doom like program (full screen, good speed) is out of question withouth a 32Mhz CPU with a real 32 bit bus.

But still, this game is in 32k colors while Doom is only in 256 colors.

Source record: 193492

Well, I personnaly have an illegal copy of Spectre 3.0 (shame on me).
I intend to patch it so it can work on Falcon. I have already modified
disk routines so that they can read 1.44 Mb disks (without GCR !).
Sadly, even if the patch works well (or seems to), my Spectre refuses
to recognize System Disks. So if anybody could send me a disk in
Spectre format that contains a System fully functionnal, I will be
glad to publish the needed patchs.

Cyrille Dupuydauby, Backward's author.

Don't you need to compile this with your native compiler, to produce
binaries that'll work on the Alpha?

I'm going through this same process on an NCR System 3000 multiprocessor
(with an unknown number of '486/50 CPUs, and apparently a great deal of
RAM.... du /proc tells me ~200MB when the machine is about 90% idle!);
I'd have everything going perfectly if I'd've had a "stab.def" file
available on Friday.

When I built as, I got 'as', not 'gcc-as', so I'm flipping my $PATH
around when I want to build Atari binaries and when I want to built UNIX
binaries... no problem, I've got a nice bash procedure to do it.

I intend to post a full account of my adventures as soon as I've got it
fully tested; I built the object files for a largish program friday
afternoon (since I had everything that I needed except a cross-compiler
ld) and it linked/ran fine as soon as I got home. The NCR box churns
code quite a bit faster than my ST... ;-)

Of course, the message I was replying to DID find fault with the programs...

But really, how often are compiler manuals really good? The Lattice manuals aren't notably worse than Microsoft C manuals. Plenty of stuff is harder to find than it should be (if a KWIC index was ugly and added $5 to the cost of the package, I'd STILL be grateful for it), but everything new that I've needed to know has been there. For old stuff, I have Compute! books and the Mark Williams Lexicon.

Greetings all!
I am looking for any and ALL upgrades for the ST. This includes mem
upgrades to any other mods you people out there know of. Particularly
memory upgrades is what I'm looking for but it someone has something
pretty interesting out there for the ST then send it my way please!
I heard something once about using Mac SIMMS in an Atari for the 4meg
mod on a 1040ST...anyone know of this? Also TOS upgrades would be rather
nice as well. I'm still at the terrible 1.08 stock in the 1040STf...
I don't want a software version...I'm looking for hardware on that one.
Thanks alot folks!

The blitter in the Falcon is perfectly capable of working in 256 colour mode
already, there is no need to redesign it!

I'm pretty sure NVDI uses the blitter in this mode, if it doesn't then it is
probably because of the overhead required to setup the blitter to blit each
bitplane means that it is faster to use the CPU.

There seems to be a general attitude among people that a blitter is some kind
of wonder chip, this is NOT so, once you reach the power level of CPU's like
the 030/040 then Blitter chips become obsolete.

The MegaSTE uses a PLCC version of the 68881 or 68882 by Motorola.
You could probably get one from someplace like Jameco Electronics,
though they'd charge you a pile for it... Maybe Toad or Rising STar
would have one?

Be warned, though, that it'll only do ANYTHING if the program was made
to take advantage of it! Only a few programs are, too...

On Feb, 12 I will host another Midi Maze party. If you didn't make it to last months meeting, then you really missed out. Mucho thanks to Tim Wilson for bringing the machines/people that he did. There were six ataris and 2 IBM's at the party and we had a blast. Now for the important stuff on what to bring:

1 Atari (whatever) as long as it has Midi ports
1 (or more) Midi cables
1 outlet strip (important)
beverages (if you bring alcohol, it is not my fault if your reflexes suffer)

If you have an IBM, and want to bring it then please do so. We will be playing doom, hopefully on a ethernet this time.

Please email me to RSVP and to get directions.

One way to do this is with the standard UNIX utilities uuencode and uudecode.
There are versions for both ST and PC (many versions, actually). You will
end up with an ASCII text file that can be split into hunks and reassembled
on your ST quite easily.

If you have access to a UNIX box, it is even easier. Simply use the
uuencode and split commands to produce the files, then use an ST version
of cat and uudecode to put them back together and decode them.

2488. Top 10 List

Newsgroup: comp.sys.atari.st
Date: 1994-02-06 00:50:10 UTC
From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <2j1es2$l5m@charm.magnus.acs.ohio-state.edu>
Source record: 193414

The (First) Annual C.S.A.ST "Top 10"

Last December I announced on Comp.sys.atari.st, that I was trying to put together a "TOP 10" list of new programs that came out in 1993. The only real qualification that I put on submissions was that it either orginally came out in 1993 or had an update in 1993.

I had originally intended for this to reflect the PD/Shareware market only, but after several requests I expanded it to allow commercial software. Oddly enough almost all of the commercial software people nominated were applications and not entertainment. So for this reason you will find a "Top 10" Commercial Applications but only an "Honorary Mention" section for commercial games.

The big hole in this list is my fault, that being the lack of a "Midi/Music" category. I received several lists that would have fit into this area. But my knowledge of the market left me uncertain as to whether they met the first and only criterion, that being origin date. I am sorry, and please accept my apology for this failing.

This list represents not my personal opinions but the combined opinions of over 120 members of c.s.a.st, that took the time to drop me a list. I know that there are alot of titles that appeared on this initial lists that don't appear here, but what was interesting was the number of people that liked the same packages. I also know that there were alot of pieces of software that came out in 1993 that deserve to be on one of these lists but aren't. If you have a favorite program that falls into this category, please take the time to let the author know how you feel. A thank you may not be as nice as money, but it sure beats dead air.

At the end of this document you will find information on reprinting and distribution of this article.

So without further fanfare on to the lists.

Commercial Applications

1 Straight Fax Fax Program Commercial
2 AtariWorks Application Commercial
2 NVDI System Enh. Commercial
4 SpeedoGDOS System Enh. Commercial
5 Warp 9 (3.75) System Enh. Commercial

I am interested in buying the following software for ATARI MEG (4MB RAM,
40 MB HD, very slooow, two page monitor)

- a relational database system (single-user) with reasonable programming
capacities, and
- a spreadsheet, preferably programmable as well with
the possibility of transferring data to/from the data base. The two may but
need not to come as a package.

The programs are to be used by people for whom using any computer means
the worst nightmare come true. I anticipate that they will have to use the
programs in a command mode (not only through the pre-programmed modules),
so the user's interface must be REALLY user friendly.

COULD SOMEONE GIVE ME RECOMMENDATIONS?

Sorry if it is a FAQ. In this case coordinates to FAQ ftp location would be
appreciated.

PLEASE respond directly via e-mail to

As far as I know fast SCSI, it's hard to really be sure though seeing that
this particular item isn't finished yet.

Every time I turn my st on, it relocates a rom image to ram
simply by adding an offset to everything that looks like a pointer to
something within the rom image. There are afew problems, some of
which I haven't tracked down, but this is a 192k file with a 192k
range of numbers to change. A stack might be 8k or smaller, and the
range of numbers to alter would be the same. If something like this
is used with caution, I think the increased functionality might be
worth the protential for damaging data on the stack. (Obviously I
wouldn't want to use a hard disk defragger that used this technique,
but if it made some programs run much better, I would be happy.)

I have seen "file splitter" programs around that simply chop files into multiple pieces. You can use whatever programs to concatenate them together. The program names "append" and "splitit" seem to ring a bell. Check out a.a.u.e.

A couple of years ago I wrote an archiver that supports multi-volume archives ala ARJ and the newer PKZIP's. It compressed better than ARC, but worse than LZH or ZOO. It also ran slower. The only really neat thing about it was that you could split your archive into multiple pieces by the following command:

liu.ttp a -s720000 file.liu [files...]

This would create the archives file.liu, file.l01, file.l02 and so on in 720K pieces (or approximately in that range). I never did finish that program to my satisfaction ever since I found gainful employment. Maybe one of these days I'll send it to comp.{binaries,sources}.atari.st. In any case, if you want a copy, just E-mail me.

2494. Precompiled header files in Lattice C 5.6

Newsgroup: comp.sys.atari.st
Date: 1994-02-06 05:19:33 UTC
From: dbyfield@outb.wimsey.bc.ca
Message-ID: <dbyfield.0r5o@outb.wimsey.bc.ca>
Source record: 193474

I am compiling Mint 1.04 using Lattice C 5.6. However, problems are happening when I try to make the precompiled header file called "Mint.Sym". According to the LC User Manual, first use the Program Menu/Precompile option. Then specify "Mint.Sym" in the Compiler Options/Advanced/Precompiled-Headers dialog. The current source window is processed with the global project options(MintLC.PRJ) to produce "Mint.Sym".

My questions are:

1) What file should be in the current source window as specified above? (I tried main.c, but no luck. As there are several files in the project, which Mint source file should be "in the current window"?)

2) How do you specify WHICH headers to include in the pre-compiled header file?

This is the first time I have had to compile a project with a pre-compiled header file, and any help would be greatly appreciated.

Thanks in advance. :-)

>386-SX 32 can handle it, the Falcon can quite simply, especially with
>the DSP handling the texture-mapping which is pretty intensive on
>the poor Intel combined with everything else that is going on!

Uh, the DSP won't help much in the texturemapping, since the falcons
256 color modes are interleaved bitplanes, not 1 byte per pixel, like
a VGA card. the DSP can't 'talk' to memory very fast.

The best bet would be 320x200 TC modes, but then the falcon is strained
to push out 1 word per pixel. I've done texture mapping on the
Falcon, and its kinda slow.

"of Lasers and Men" does a very good job however of a wolf3D/blake stone
evironment, but DOOM would have a horrific frame rate at full screen
(like it does on my 386-16)

2498. Top 10 of 1993

Newsgroup: comp.sys.atari.st
Date: 1994-02-06 06:36:32 UTC
From: dackerma@magnus.acs.ohio-state.edu
Message-ID: <2j235g$m5c@charm.magnus.acs.ohio-state.edu>
Source record: 193477

The (First) Annual C.S.A.ST "Top 10"

Last December I announced on Comp.sys.atari.st, that I was trying to put together a "TOP 10"
list of new programs that came out in 1993. The only real qualification that I put on submissions
was that it either orginally came out in 1993 or had an update in 1993.

I had originally intended for this to reflect the PD/Shareware market only, but after several
requests I expanded it to allow commercial software. Oddly enough almost all of the commercial
software people nominated were applications and not entertainment. So for this reason you will
find a "Top 10" Commercial Applications but only an "Honorary Mention" section for commercial
games.

The big hole in this list is my fault, that being the lack of a "Midi/Music" category. I received
several lists that would have fit into this area. But my knowledge of the market left me uncertain as
to whether they met the first and only criterion, that being origin date. I am sorry, and please
accept my apology for this failing.

This list represents not my personal opinions but the combined opinions of over 120 members
of c.s.a.st, that took the time to drop me a list. I know that there are alot of titles that appeared on
this initial lists that don't appear here, but what was interesting was the number of people that liked
the same packages. I also know that there were alot of pieces of software that came out in 1993
that deserve to be on one of these lists but aren't. If you have a favorite program that falls into this
category, please take the time to let the author know how you feel. A thank you may not be as nice
as money, but it sure beats dead air.

At the end of this document you will find information on reprinting and distribution of this
article.

So without further fanfare on to the lists.

Commercial Applications

1 Straight Fax Fax Program Commercial
2 AtariWorks Application Commercial
2 NVDI System Enh. Commercial
4 SpeedoGDOS System Enh. Commercial
5 Warp 9 (3.75) System Enh. Commercial
6 Chagall Art Package Commercial
7 Speed of Light 3.0 Graphic Utility Commercial
8 Phoenix 1.0 Art Package Commercial
9 EdHak Text Editor Commercial
10 Script 3.0 Word Processor Commercial

Graphics/Art Packages

1 Kandinsky Art Program Shareware
2 Persistence Of Vision 2.1 Ray Tracer Public Domain
3 MyDraw Art Program Shareware
4 Crack Art Art Program Shareware
5 MNDL_226 Mandlebrot Public Domain

Game (PD/Shareware)

1 Centipede Game Shareware
2 NetHack Game Public Domain
3 PsychoPig2 Game Shareware
4 Utopus Game Shareware
5 Galaxians Game Shareware
6 Space War TNG Game Public Domain
7 Bio Hazard Game Shareware
8 Conquest Game Shareware
9 Pacman on E's Game Shareware
10 Shanghai v.1.10 Game Shareware

Graphics/Text Utilility

1 GemView Graphic Utility Shareware
2 Masterbrowse 3.3 Text Utility Shareware
3 Speed of Light Graphic Utility Shareware

Programming Language

1 Gnu C Prog Language Freeware
2 Heat-N-Serve C Prog Language Public Domain
3 Lattice C v.5.52 Prog Language Commercial
4 HiSoft Basic 2.1 Prog Language Commercial

System Extension

1 Before Dawn System Enh. Shareware
2 Selectric System Enh. Shareware
3 DeskCopy System Enh. Shareware
4 MiNT (1.09) Alternative OS Freeware
5 WinX System Enh. Public Domain
6 Gemini Alternative OS Shareware

7 DeskPic 1.05 System Enh. Shareware
8 Minix FS System Enh. Freeware
9 MultiDialog System Enh. Shareware
10 Let Em Fly System Enh. Shareware

Telecomm

1 Connect Telecomm Shareware
2 TeddyTerm2 Telcomm Shareware
3 Storm Telecomm Shareware
4 Mountain QWK Telecomm Shareware

Utility

1 ST ZIP Utility Postcardware
2 XControl 1.31 Utility Public Domain
3 DeskTrackerMT Utility Shareware
4 ESScode Utility Public Domain
5 Mega Depack 2.12 Utility Public Domain
6 Paula 2.x Utility Shareware
8 Accent 2.06 Utility Greenpeaceware
9 German2English Utility Shareware
10 GEMBench Utility Shareware

Honorable mention Commercial Games:

Civilization, ISHAR(I & II), Steel Empire, Legends Of Valour & Zool

I hope you find this list as interesting and informative as I did.
Congratulations to everyone
whose programs made one of these lists and thank you for your time and effort.

And Thank you, Merci, Danke to all of you who helped me put this list
together. I will try to
thank all of you personally, but if I miss anyone, let me thank you now.

Now, as far as reproduction, publication or transmitting of this article,

Yea, I have heard the same from others. Atari is concentrating on the Jaguar as much as they can.. They can't afford to play computer company when they need to try and get their foot in the game market they once used to rule. Its pretty logical actually. I don't know if ATARI has just experienced bad luck, or really bad management... I'd guess both. ATARI has said that the Internet is full of rumors so they don't come very often. I guess that is partly true, but theres also alot of information spread to alot of people. I think this Falcon060 thing is a rumor, so lets end it here, if someone can prove me wrong with a FACT, be my guest.

In my opinion the Falcon thing didn't work out, and now with ATARI "away", I know that the only way it will stay alive is by the support of its faithfull users. Hey, if it weren't for you faithfull users, ATARI would have been gone a long time ago. I am going to abandon ship! I'm leaving ATARI, switching platforms. I wish you all good luck. You'll need it, ATARI doesn't stand a chance in the computer market, even if they had a Falcon060. Its the era of the Pentium/PowerPC, and ATARI isn't part of it.. Can you guys tell where I'm going? :)

Well these are just my opinions, as always.. No flames please. I will keep reading this group for a while so post your thoughts, or leave me mail.

> much more extravagant than that.

Prepare to become just a little more nervous then! Everything _should_
work fine except for the fact that you will need to find a way of
wiring the HD-DETECT line from the floppy-drive to the ST. (This is a
line driven by the floppy-drive when an HD disk is present, to tell
the controller what clock speed to use). One solution is to find an
insignificant pin on the 14-pin ST floppy connector, cut it from the
ST PCB, and wire it to the appropriate pin on the FDC. I would suggest
using the unused Drive Select pin (Pin 6? I'm not sure!)
I'v upgraded my old STFM to 1.44Mb using the System Solutions kit,
and if I recall, there was something in the instructions on how to
wire things for an external HD drive. Damned if I don't have those
instructions now :^] ! Perhaps someone else has....

Cheers, Steve

Well actually I've reconsidered for a number of reasons.. First of all, its hard to find a TT, since their not being made anymore.. The only computer being made by ATARI is the Falcon, for a while still anyways. Not just that, but theres TOO little support.. Should these words be uttered by an ATARIAN? :) I'm also against the falcon for the above stated reasons, and not to mention ATARI is probably going to stay away from computers for a while until they do something with the Jaguar. I have decided to switch platforms, I'm selling my ATARI and going to a much better place. :) Hey, why bother supporting a computer that you paid for and get nothing in return.. Pay for your computer and let them support YOU. Hmm.. I must be speaking like a radical in the ATARI world huh? Well, we got promised an elevator, but given a shaft.

Good luck, then. But have you ever wondered why, in TOS for example,
every executable program has a relocation table that tells TOS where
the objects to be relocated are, and how to relocate them? If it was
as easy as you say, we've all been wasting Kb's of disk space with

superfluous relocation data! :>

Cheers, Steve

PS. Sorry to waste Kbs of net bandwidth with this! B-)

2504. Pagestream 2.2

Hi all,

I've just read a message in comp.unix.misc from someone who is,
apparently, using Mint on an Apple Mac! If this is so, it's news
to me! Any comments? Copy of post below.

Cheers, Steve

```

I have a few questions about Mint (unix like operating system for the Macintosh)

1) Is it possible to run X11 applications under it?

2) Is it stable enough to use?

3) What is the official anonymous ftp site (if there's one) ?

4) Does it run on machines other than Mac & Atari?

Thanks

If there is a local bulletin board around your area that supports Atari ST, look around for a program called ANSITerm. It supports full 16 colour,80 column ANSI and works on any Atari ST/STE machine.

Hope this helps.

Hi, Ralf. You probably know me better as the other half of the Richard Hecker account on CRS Online. I'm on a number of local Atari bulletin boards which are serious about supporting the Atari ST and all that goes with it. They are part of a small network of Atari enthusiasts and regularily post price lists from Compuworld, Replay Entertainment and Scarborough Computers and are strong advocates of the Atari computer in general. I'd be interested in obtaining some information on your products, since I, too, am enthusiastic about Atari (in spite of what some nay-sayers may whine about. :-) I can pass this information along (or write up reviews) to the aforementioned people and review the products in their local online magazine, "The ExtremiST" (I've been looking for a good column to submit, anyway. :-)

E-Mail me (or just post me on CRS Online) more about it.

Yat@Lexicor,

That is standard for the 68040 (by nature, the 040's internal clock is doubled). Motorola just doesn't go spouting off nonsense by calling a 32MHz 68040 a '040DX2-64'! <grin>

Does anybody know where I can get an English ZX Spectrum Emulator from??

I FTP'd one from an atari.archive mirror - but all the docs are in German!!
(There was one which had been run through a German-to-English program, but
it was completely unreadable!)

The main reason is - I was hoping somewhere in the documents are details of
how to get Spectrum software off tape and onto a disk so I could use it on
my ST. I have loads of old Speccy games at home, most of which aren't available
for the ST (Xeno is one of my all-time favourites.)

Any help would be appreciated,

Rodders.

P.S. Thanks to all those who helped me with my Knights of the Sky question.

From: ingo@IKP.Uni-Koeln.DE
Message-ID: <2j33t4INN2ifl@rs1.rrz.Uni-Koeln.DE>
Source record: 193430

Hello everybody!

I would like to port a GEM based program to the x11 envrironment.
The window / graphics handling is in my opinion too different to
be emulated through a lib., but having the form handler under X11
would save much work. It also could be useful for developing X-specific
applications -- at least I think it is a very simple to program, yet
powerful tool.
My question to the world: Has anybody written a library emulating
the form_.. and rsrc-.. calls - or only parts of them - under X11
and is willing to share it with the public (i.e. me) ??
Any suggestions and even half-ready, or partial solutions welcome.

Ingo

Hey Dom,
I can't answer your question but have one of my own.

I recently sold (not to you) my copy of US and PGS2.2 along with a lot of hardware, shipped it and now the party won't pay all the $$ we had verbally <phone> agreed on. My Q's this,

What is the street value (average, fair, whatever), for A complete registered Ultrascript package, + US font package, these days ?,

Also same Q for PageStream 2.2 all disks, manuals, 100's of PD fonts?

and

Calamus 1.09 with the Calamus Font Editor, too?

Note, all are registered and transferable.

I would very much appreciate info or opinion on these values US$$ please. from you or anyone else who knows or feels like he/she does.

Don Nelson, don.nelson@launchpad.unc.edu

PS my case to the judge may be helped by this info, if it comes to that.

Calligrapher on the STR cover disk is not disabled in any way, it's a
fully working version. However, since the full Calligrapher package
consists of 4 disks, many of the extra modules had to go. This includes
the FlexText module Im afraid. We did leave the Import/Export one in so
you can use ASC, TXT, 1W+ DOC, RTF files. There's no way the dictionary or
thesaurus would fit on a single floppy.

This post recently appearred on Genie:

(From Ron MacDonald on GEnie, about TT's being back in production)

Glad to see some TTs back into the marketplace. Many users have lamented the fact that without some kind of production from Atari, they felt the company was giving up on computers. The Falcon is fine but not necessarily for everyone. My editors swear by the use of their TTs to process work fast and efficiently. The 32 Mhz speed helps with redraws for DTP work, and all in all is a powerful, easy to use computer.

I just wish everyone would "Keep on Keepin' On". We don't do each other any good by contemplating the company position every other day. I figure they have run their business their way for their profits and the profits of shareholders for quite some time. I don't always like what they do, but then I am sure some folks don't always like what I do.

Our attitude is to just keep living the Atari atmosphere one-day at a time, with a positive attitude that everything will work out. If that is dreaming then so be it. Dreaming is good for everyone.

Safe C. O. D. ???

** Selling and Buying on the Internet. **

A recent bad experience with selling on the Internet
prompted me to write this, so that others might learn
the pitfalls and to avoid my mistakes. Please add
to this thread. Other information is needed.
A FAQ on this is probably somewhere, but here goes.
For the record what follows is strictly my own
opinion and is not no way a legal opinion or legal advice.

Commercial use of the Internet is forbidden, as I understand it but
individuals may use the net to advertise and arrange to sell or swap
personal goods on the net.

How does one do a deal in a way that protects
both parties, assuring that each will get what
they want, the cash or the goods?

Successful dealing is not so easy.

Individuals cannot absorb the result of screwups of
non-performance of the agreement, like a company.

Clarity about the exact nature, even serial numbers, and condition of the
goods, must exist. Used stuff is nearly always lacking something, manuals,
power cords...

Agreement on the exact method of payment must be made, method of shipping,
even packing, who pays for the shipping, when will the package(s) be sent.

On items of high enough value, consider insurance, tracking, and C. O. D.
All arrangements should be specifically spelled out.

A record should be made of the all the important aspects of the deal.

Most of the time these deals are arrived at by email, or a phone call.

There is no paper - no hardcopy, record of what is
promised. Just bits in your electronic mailbox. If you
capture the transaction that way and you should, then you do have a
record, of sorts.

With a phone call, of course, there's nothing (record it? nah, its illegal
without the other parties knowledge) either.

Most of the time these deals work great.

So what goes wrong. Most have a story or two,
or have heard of one. Its the human condition
to get F____d sooner or later. It even happens to
saints which is why some of 'em are saints. (I digress).

Two main screwups happen,
either
you don't get the goods you thought you had been promised
or
you didn't get the cash agreed to.

To cover the first point - work out ahead of time
what to do about it if,
The goods never came.
The money never came.
The goods were damaged in shipment.
The goods were not what you expected,
broken, wrong model, etc.
The right goods came but now you don't want it.
It blew up a week later, etc., and so on.

Anything from take it AS IS for cash on the spot,
to a generous take back period, for full value, is possible,
as long as the terms are agreed to. Usually its
something in between and its negotiated verbally.
Usually the two parties are far away strangers,
living across state lines, and will never meet
face to face for the exchange.

Unfortunately, the distance, anonymity, lack of paper, faulty memory,
procrastination, and one of a kind nature of these deals can cause serious
changes in one or the others performance of the deal.

The sticky part is how do you document these terms
in case the other party does not perform as expected.
You will need this documentation to bring a credible
law suit to recover the goods or cash.
This is hardly ever done,
but get it in writing, with a date and signature,
legal like, with noterization if you are that worried.

If I had my deal to do over, I would insist on the buyer signing my
'invoice' of goods, noting all the particulars, terms and money to be
paid, time limits, etc. List out everything you think is important to you,
send him two copies. one you sign for him to keep and a second FOR HIM TO
SIGN - that HE'LL PAY, and return to you. Only when both parties have
signed agreements like this, in hand, is it reasonably safe to assume the
deal can be done smoothly. Its not a graranteed water tight thing. But, it
does document the agreement and set a basis for trust that the goods and
the money will be forthcoming.

Barring that, make some good notes to yourself on your
understanding of the deal, make a hardcopy (very important)

and sign and date it.
Send a copy to the other party - USmail that is, since
dating on electronic files or email files
can be easily altered and would not hold water
in a legal sense.
The reason to do this is to give you some powerful leverage
in dealing with the other party later, if there is a disagreement.
If need be, this hardcopy could be useful in court.

I thought I had a good deal going in December.
Sold a load of hardware worth around $2000, as a package deal, at deep
discount under the $$ value of individual pieces. On the phone we agreed
on items, condition, price, terms, shipping, payment by COD - cashiers
check only, etc., everything - I thought my risk was small.

NOTE here, C. O. D. in the laymans mind (i. e., mine, predeal) means Cash On
Delivery. Cash means US dollars or equivalent, right?

WRONG ERROR NOT

When you go to a shipper, I used UPS, COD means Collect On Delivery,
Collect is defined in the fine print nobody reads. And the default
definition of collect what, is anything that is paper and looks like money
at the destination shipping office or on the consignees door step.
You must ask
for 'special instructions' to be written into the paper work - and write
'CASH ONLY' on every tag. And get a tear off receipt stub, that also says
it. To make this already long story longer, I paid $4/box times six for
COD, and I got screwed with a worthless personal check at the other end.

After receiving the goods via UPS C. O. D., the other party thought I
misled him about one item, that was originally posted incorrectly
(wrong Mb of RAM),
but was correctly described in a phone negotiation and in my letter sent to
him before shipping.

To my dismay, UPS accepted his personal check to collect a "CASH ONLY" COD
shipment. I was getting one last box of things together to send, box #7,
representing about 5 % of the total value, when I heard he had not paid
the COD with cash. So I decided to wait until his checks cleared his bank
before sending the last box. He did not know I had not sent the last box.
He put a stop payment on the check, without any attempt to inform me. I
thought everything was OK until my bank sent his check back to me stamped
NO PAYMENT about one month after the delivery.
He then agreed to pay me the remaining $200 when I sent the last box. OK,
I sent the box. Now, this pirate has everything and refuses to pay
me the remaining $200 he owes me. On top of that he won't return the
items he says he's dissatisfied with for a refund as was his clear
option in the beginning.
Logic and fairness are not this guys strong suits.

I have no email from him - he reads it but doesn't write it - nothing in writing - I do have the UPS shipping records, numerous phone calls recorded on my bill, and lots of notes to myself and copies of several following letters to him, as I got more and more frustrated over the injustice of my predicament.

I have a mind to go after him in small claims court, and try to get a judgement for the cash he owes me, or better yet the goods itself back (worth about $2000 used) , plus legal costs plus damages to my business, since the stuff was assigned to my business.

I am in N. Carolina, he's in Calif., so this will be tough. But. I've got friends, frat buddies in Berkeley where he lives, and an electronic crowbar, email and the Internet, to work with. I'm feeling its a challenge I cannot resist.

Advise me! Cool it, go for it, what??

Safe C. O. D. ???

** Selling and Buying on the Internet. **

A recent bad experience with selling on the Internet
prompted me to write this, so that others might learn the pitfalls and
avoid my mistakes. Please add to this thread. Other information is needed.
A FAQ on this is probably somewhere, but here goes.
For the record what follows is strictly my own opinion and is not in any
way a legal opinion or legal advice.

Commercial use of the Internet is forbidden, as I understand it but
individuals may use the net to advertise and arrange to sell or swap
personal goods.

How does one do a deal in a way that protects both parties, assuring that
each will get what they want, the cash or the goods?

Successful dealing is not so easy.

Individuals cannot absorb the result of screwups of non-performance of the
agreement, like a company.

Clarity about the exact nature, even serial numbers, and condition of the
goods, must exist. Used stuff is nearly always lacking something, manuals,
power cords... Be clear as you can about these details.

Agreement on the exact method of payment must be made, method of shipping,
even packing, who pays for the shipping, when will the package(s) be sent.
On items of high enough value, consider insurance, tracking, and C. O. D.
All arrangements should be specifically spelled out.

A record should be made of the all the important aspects of the deal. Most
of the time these deals are arrived at by email, or a phone call.

There is no paper - no hardcopy, record of what is
promised. Just bits in your electronic mailbox. If you
capture the transaction that way and you should, then you do have a
record, of sorts.

With a phone call, of course, there's nothing (record it? nah, its illegal
without the other parties' consent) either.

Most of the time these deals work great.

So what goes wrong. Most have a story or two, or have heard of one. Its
the human condition to get F____d sooner or later. It even happens to

saints which is why some of 'em are saints.
(I digress).

Two main screwups happen,
either
you don't get the goods you thought you had been promised
or
you didn't get the cash agreed to.

To cover the first point - work out ahead of time what to do about it if,
The goods never came.
The money never came.
The goods were damaged in shipment.
The goods were not what you expected,
broken, wrong model, won't work in your system, etc.
The right goods came but now you don't want it.
It blew up a week later, etc., and so on.

Anything from take it AS IS for cash on the spot, good luck,
to a generous take back period, for full value, is possible,
* as long as the terms are agreed to *. Usually its
something in between and its negotiated verbally.
Often the two parties are far away strangers,
living across state lines, and will never meet
face to face for the exchange.

Unfortunately, the distance, anonymity, lack of paper, faulty memory,
procrastination, and one of a kind nature of these deals can cause serious
changes in one or the others actual performance of the deal.

The sticky part is how do you document these terms
in case the other party does not perform as expected.
You may need this documentation to bring a credible
law suit, God help you, to recover the goods or cash.
This is hardly ever done, but get it in writing, with a date and
signature, legal like, with noterization if you are that worried.

If I had my deal to do over, I would insist on the buyer signing my
'invoice' of goods, noting all the particulars, terms and money to be
paid, time limits, etc, and returning it to me. List out everything you
think is important to you, send him two copies. one you sign for him to
keep and a second FOR HIM TO SIGN - that HE'LL PAY, and return to you.
Only when both parties have signed agreements like this, in hand, is it
reasonably safe to assume the deal can be done smoothly. At this point
send off the goods. Its not a guaranteed water tight thing. But, it does
document the agreement and set a basis for trust that the goods and the
money will be forthcoming.

Barring that, make some good notes to yourself on your
understanding of the deal, make a hardcopy (very important)
and sign and date it.
Send a copy to the other party - USmail that is, since

dating on electronic files or email files
can be easily altered and probably would not hold water
in a legal sense.
The reason to do this is to give you some powerful leverage
in dealing with the other party later on if there is a disagreement.
If need be, this hardcopy could be brought to court.

I thought I had a good deal going in December.
Sold a load of hardware, individually worth about $2000, as a package
deal, at deep discount under the $$ value of individual pieces. On the
phone we agreed on items, condition, price, terms, shipping, COD payment
by registered check,
etc., everything - I thought was covered.

NOTE here, C. O. D. in the laymans mind (mine, predeal) means Cash On
Delivery. Cash means US dollars or equivalent, right?

WRONG ERROR NOT COD =/= CASH.

When you go to a shipper, I used UPS,
* COD means Collect On Delivery *, as defined in the fine print nobody
reads.
And the
* default definition of collect what *, is anything that is paper and
looks vaguely like money at the destination shipping office or on the
consignees door step. I didn't learn until much later that one must ask
for 'special instructions' to be written into the paper work - and write
'CASH ONLY' on every tag. And get a tear off receipt stub, that also says
'CASH ONLY'.

To make this already long story longer, I paid $4/box times six for COD on
each, and I got screwed with a worthless personal check for $200, at the
other end. I didn't know that I had been screwed by UPS and then by the
buyer, until about a month later when I tried to cash the checks.

After receiving the goods via UPS C. O. D., the other party claims I
misled him about one item, that was posted incorrectly (Mb of RAM), but
was subsequently correctly described in a phone negotiation and in my
letter sent to him before shipping. This was one computer out of 12 major
item I sent to him.

To my dismay, UPS accepted his personal checks (2) to collect a "CASH
ONLY" shipment on two separate days. I was getting one last box of things
together to send, box #7, representing about 5 % of the total value, when
he called, asking where the other boxes were (he picked up 4/6 the first
day). Also he said he had not paid the COD with cash. So I decided to wait
until his checks cleared his bank before sending the last box. He did not
know if I had sent that last box or not. He put a stop payment on the
check, without any attempt to inform me of his problem or his intended
action. I thought everything was OK until my bank sent his check back to
me stamped NO PAYMENT about one month after the delivery. This pirate
refuses to pay me the remaining $200 he owes me, AND he won't return the

item he's dissatisfied with for a refund as was his clear option in the beginning. Logic and fairness are not this guys strong suits.

I have no email from him - he reads it but doesn't write it - nothing in writing - I do have the UPS shipping records, numerous phone calls recorded on my bill, and lots of notes to myself and copies of several following letters to him, as I got more and more frustrated over the injustice o't come across in a month or so I will name names, so keep posted. I will post up the serial numbers on my stuff, in case he has the balls to try to sell it out from under me. He could do jail time if he tries a stunt like that. Can I go after UPS or use the FBI in a case like this?

Advise me! Cool it, go for it, what??

I hope the buyer sees this. I'll send him a copy to be sure.

Oh for crying out loud! Why are you comparing a Falcon to a Quadra?!?
A 16MHz 030 system to a 33MHz 040 (with much better video too)? Try
comparing machines with the same power. Like a Falcon and an LCII. I bet
they're similar in price even in Germany. Of course System 7 is slow, so
you'll probably need an LCIII which should still be around the Falcon's
price.

2531. Cleveland Free-Net Internet Access Increases Yet Again!

Newsgroup: comp.sys.atari.st
Date: 1994-02-07 21:14:51 UTC
From: xx004@cleveland.Freenet.Edu
Message-ID: <2j6b0b$ae@usenet.INS.CWRU.Edu>
Source record: 193531
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit,rec.games.video.atari

The Cleveland Free-Net has increased its Internet connections once again
in the past week:

<<< FROM THE ADMINISTRATOR >>>

INTERNET ACCESS UPDATE: freenet-in-a.cwru.edu and freenet-in-b.cwru.edu
are now nicknames for kanga.ins.cwru.edu (129.22.8.32). kanga is a
486/DX50 with 64 Mb of memory running BSD/386. It supports 80
simultaneous users, for the time being. freenet-in-c.cwru.edu still
points to nextsun, which has an increased user limit of 25. With these
changes, the capacity for users accessing the Cleveland Free-Net via the
Internet has increased over the past week from 15 to 105 simultaneous
users (a net increase of 90 users).
[chet/mak - Mon Feb 7 15:07:53 EST 1994]

Even though the new version of the Atari SIG will not be completed until
later this month, we still look forward to seeing you at the Atari SIG that
is presently online!

Thanks.

Len Stys, SIG Manager
Cleveland Free-Net Atari SIG

floptical format: maybe they come preformated now, but they didn't when I
got my floptical disks. when I look for media, I find unformatted disks
advertised (as usual, I'm probably looking in all the wrong places)

backup support: dbII supports flopticals only by pretending they are a HD.
there is *no* multi volume backup support. from what I hear, this will
be corrected in DBIII.

Atari specific retailers of hardware and software in the UK are doing very well these days, although they can't quite work out why they are...

Roger, I was hoping you'll be able to tell the difference between ST Review and ST Format. The news in ST Review are normally correct and are NEVER invented. I believe this item was actually supplied by Atari UK.

I need a program that will play CD's. I tried cdplay.lzh, but although the busy light on my CD-ROM drive lights, no sound comes from the headphone (or RCA) connections.

I've got the CD-ROM drive connected to the TT SCSI port, if that makes any difference.

It's a very simple procedure, from what I've read. Guess I'll have to do it myself. Any clues?

First of all, your specs are quite far off:

The Falcon runs on an MC68030-16, not a 25, and this is the low-end model.

The sound chip is an Atari proprietary having 8 16-bit channels. It also has a DSP (Motorola 56001) to assist in sound.

It also has dual Yamaha 2149s for ST/e compatibility.

It has 50khz sampling, not 80.

Its "polygon accellerator" is actually a BLiTTER, which is capable of far more than accellerating polygons.

Its ram is either 1, 4 or 14 megs (with 2 megs reserved for the OS regs)

VRAM (I assume you mean a processor cache) is 96k.

The internal hard drive is a 2.5" Segate 80 meg IDE.

Which brings us to the next point, that the Falcon has an internal IDE port in addition to its external SCSI-II port.

Future? Plenty. Multimedia to be sure, MIDI, as always, and plenty more. Not to mention that the Falcon is priced far lower than any Mac Quadra system.

CYOTFS!

As someone else pointed out, there are occasions when you don't know if you should relocate a particular location (relocation when the program is running is harder, because you have to relocate all the pointer values as well). The example used was

```
union u {
long value;
void (*func)(void);
}
```

If an object of type u is being used as a function pointer, it needs relocation. If it's being used as a long value, it doesn't. (Leaving aside the question of *why* you'd want to do this...)

>>MiNT does allow code sharing, for processes which are specially written to
>
> and how is that done?

The code is specifically written to avoid absolute address accesses. All accesses are done relative to a register (then, to relocate your program, all you have to do is change the value of the register).

I think it is faster with the blitter because we only have plane-modes when
using 256 colors (i.e 8 planes). Of course it'd be senseless to use 256 color-
mode, if you do not need exactly that many colors, or if you have planes
that all have the same color.
Otherwise I can recommend the True Color mode. It would be very fast, if you
want to use Gouraud-shading or anything that uses many colors.

2556. Blitter in Falcon and STe.

Newsgroup: comp.sys.atari.st
Date: 1994-02-08 11:41:22 UTC
From: se1ap@dmu.ac.uk
Message-ID: <1994Feb8.114122.24201@dmu.ac.uk>
Source record: 193512

There's been a lot of discussion about the blitter recently in the Falcon. Well let's not beat around the bush, Atari's blitter is cr*p. I was hopeing that in the Falcon the Blitter had become a true co-processor and would run at 32 MHZ like the DSP. I'm working on an STe game at the moment and using the BLITTER for the sprites and scrolling(with hardscroll as well). Anyway the blitter is faster than the processor on an STe, but maybe not on a Falcon.

The question I really want to know is would it be feasible to use the DSP for sound and graphics processing in a game/demo. After all the DSP runs at 16MIPS, the 030 runs at 4MIPS so we've potentiantly got a 20MIPS machine, right?

Apperently Virtua Racing on the Megadrive uses a DSP chip, of what sort I don't know, but that game is very fast. Let's hope that the Falcon really can kick some ass when it comes to shifting loads of graphical data around the screen FAST!

One final point, the blitter on the STE takes over the whole bloody system and ruins timer B interupts. I don't suppose that anyone knows how to solve this problem (I still want to use the blitter in HOG mode) How about you Griff?

Alan (se1ap@dmu.ac.uk).

I'm working on an STe game at the moment and using the BLITTER for the sprites and scrolling(with hardscroll as well). Anyway the blitter is faster than the processor on an STe, but maybe not on a Falcon.

Don't be quite so harsh, the Blitter in the Ste/Falcon isn't that bad, in the Falcon the blitter is over twice as fast as the STE -> since all logic operation take the same time (which is a bit of a bonus).

>The question I really want to know is would it be feasible to use the DSP for sound and graphics processing in a game/demo. After all the DSP runs at 16MIPS, the 030 runs at 4MIPS so we've potentiantly got a 20MIPS machine, right?

Yes... I use the DSP for everything to do with graphics. You store your two double buffered screens in DSP memory and transfer one while drawing the other, in this way I can do 1,000,000 gouraud shaded pixels per second or about 350,000 phong shaded pixels / sec... but the possibilities are endless, I think you could even use the DSP as a sprite engine, in practice I would say that hand-written DSP code delivers more than 16mops, since the parallel nature of the chip can be expoited 90% of the time and you are nearly always doing two/three things at once.

>One final point, the blitter on the STE takes over the whole bloody system and ruins timer B interupts. I don't suppose that anyone knows how to solve this problem (I still want to use the blitter in HOG mode) How about you Griff?

This is the main reason why I don't use the blitter, *yes* the blitter is probably quite fast at doing what it does in HOG mode, however this mode is totally unusable since you cannot have keyboard/hbl interrupts etc. The 030 can do most things faster than the blitter running sharing the bus.
As for timer B interrupts while in HOG mode, this cannot be done on an STE since all memory access freezes while the blit is done, however it is barely possible on a Falcon by preloading the cache with the HBl routine.... but this is a very contrived way of doing it...

Well, you could just forward this information to you sysadmin, with a
request to install this utility. If that is not an option, you need to
describe your UNIX system (vendor, OS version) if you want to hunt for
executables.

>Whats wrong with CVG's???? Get Calamus if you want full CVG compability....
Yes, Calamus supports CVGs. It does not, even for 500 quid or so, support
PostScript. (The DataFormer module, for PS output, costs a load more on
top). I started this thread, and wanted CVG import because Vektor has
CVG export. The EPS driver should arrive soon, so CVG becomes irrelevent
for me.

>Use Bitmap graphics for scaned pictures... And leave the vectors for illustrations...
Of course, but
a) The bitmaps were a workaround because the vector input in PageStream
is broken.
b) Vector graphics can't handle the bitmap fills that DA's Vektor can
generate.

> >excruciatingly slow, but it works well. It's even more painful to use
>>than PageStream normally is...

>One more reason to get Calamus...
A good reason to ditch PageStream, yes. But my replacement is unlikely
to be Calamus.

: > My problem is that I am getting an effective transfer rate of 0.4 Kb/Sec,
: > whereas the 486 PC owner next door to me is getting over 1 Kb/Sec.

: Do you have your baud rate set to 19200? Are you using no parity (this is
: good, given that your remote terminal server can handle it)? What kind of
: data compression protocol does your modem negotiate with the remote host?
: To find this out, there is usually an S-Register one can set with an AT
: command that will report more information when connecting to a remote modem.
: Also, you can usually dial up, connect, go to command mode (with ~~~), and
: type an ATIx command (where x is some magic small integer out of the normal
: Hayes range, check your modem manual for details as this is totally vendor
: dependent) to see what kind of connection was negociated. All of these
: things can significantly effect throughput.

Right, point 1, I do not use a modem. The rooms in the University's Halls
of Residence all have an Rs232 9600 baud connection to the Unix machine

: Finally, if you can get the sysadmin for the remote system to install a
: Zmodem implementation, get GSZRZ228.lzh and hack a quick macro in Uniterm
: to call it up. You will get much better performance than Kermit.

Does the sysadmin have to do this? Can't I just put an executable in my
homedir?

Steve Taylor.

2568. Need information about DSP Harddiscrecording

Newsgroup: comp.sys.atari.st
Date: 1994-02-08 15:30:11 UTC
From: petep@info.isbiel.ch
Message-ID: <2j8b63$f5@vega.info.isbiel.ch>
Source record: 193524

for my studies in digital signal processing i would like to write a
mutlichannel-harddiscrecording-tool.

that means:
in a 1st step i'm recording a guitarplayer in realtime on the harddisk.
then on a next step i'm recording the voice of the song. but while the singer
is singing he can hear the guitar recorded before in the headphones. we have
therefore to read from one file on the harddisc and to write to another file
on the disk simultaneous. can the falcon030 handle this (in cd-quality or lower)?

please e-mail me (petep@info.isbiel.ch)

In <2j4631$9nn@uqcspe.cs.uq.oz.au> warwick@cs.uq.oz.au (Warwick Allison) writes:

>And what if the time critical parts are within the VDI?
>(eg. what if some basic operation is PutPixelHere(x,y)?)

I doubt that the VDI would be an appropriate basis for porting X
anyway. There are several problems, including the saved mouse
cursor background not being updated by the VDI during graphics
ourput, the VDI line drawing algorithms not matching the X
specifications and so on.
I've never done such a project so far, but I would guess that for
porting X the most sensible strategy would be to do a VDI based
port first, and then rewrite certain graphics output routines,
whether in C or in assembler.
As X uses offscreen pixmaps a lot, it would hardly be possible to
get away without having to write the primitives to manipulate
them anyway, and if you can draw on an offscreen pixmap, you can
as well apply that to the screen.

Glad to hear that the DSP is as flexible as I hoped it would, I'm getting more and more tempted to buy a falcon.

>This is the main reason why I don't use the blitter, *yes* the blitter is
>probably quite fast at doing what it does in HOG mode, however this mode is
>totally unusable since you cannot have keyboard/hbl interrupts etc. The
>030 can do most things faster than the blitter running sharing the bus.
>As for timer B interrupts while in HOG mode, this cannot be done on an STE
>since all memory access freezes while the blit is done, however it is barely
>possible on a Falcon by preloading the cache with the HBl routine.... but this
>is a very contrived way of doing it...

The blitter is quite fast for real-time shifted sprites in HOG mode, I am getting around the interupts problem by :

1) not drawing sprites bigger than about 32x32 in one blitter op. Plus to use the shifter I have to do the bitplanes separatly.
The result of this is that the blitter never hogs the bus for too long.

2) using well blending ste colours for the rasters and having them 8 pixels wide.

3) I'm using a non standard joystick read where I force it to read the joystick once a frame, I never have joystick reading problems (yet!)

4) The most important HBl is where I swap from the control panel to the scrolling area. About 8 lines before this hbl I kill the blitter, therefore guaranteeing that the HBl is accurates, this only gets used if I can't process everything in a frame.

Thanx for the ongoing Falcon info....

Alan (se1ap@dmu.ac.uk)

|> Great, so pacman works on a Falcon! thanks for that info. :)
|>
|> M.A.O.
|>

Not really a game, but in the category of "old problematic programs":
PC-Ditto 2.something did seem to work on the Falcon with backwards2.41.
I used the "Best compatibility" setting, then changed CPU to 16 MHz and
enabled both caches - it worked.
However, it didn't see the Hard-disk. Maybe newer versions of PC-Ditto will.

For those that don't know, PC-Ditto is a software PC emulator.
I tested it with a Norwegian version of MS-DOS 3.3 which seemed
to work fine.

It must go.. no room left in my new place. :-(

1040ST, 1MB RAM, TOS in ROM, Internal Power Supply, Internal DS Drive.
External Atari DS disk drive
SC1224 Color Monitor
Mouse Master - Allows easy switching between mouse and joystick.
Wico Trackmouse - Trackball-type mouse workaround. Mouse port in
back so you can use mouse, too.
Wico Bathandle Joysticks (2)
Supra 2400bps modem, Hayes Compat (no compression)
Synchro Express Hardware/Software copier with software. Copies most
things.

Bought Software, with original boxes and manuals (usually)
Summer Challenge
Populous
Klax
Dragons of Flame
PowerMonger
PowerDrome
DeathBringer
Indiana Jones and the Last Crusade

20-30 disks of graphics, Spectrum pics, etc.
More than 150 disks total, with all kinds of software, plus a couple
of disk holders for them.

$400 or best offer. Send me offers or questions. Computer is
located in Central Coastal New Jersey.

So was this commentator the same person that was talking about the CD32?

I am constantly laughing at all the spin doctors out there now. One person will say the 3DO is the best and nothing can touch it. The next one will point out it's less than glamorous sales and it's (supposedly(?)I personally don't know so will use supposedly) high return rate.

All I can say is that my wife is a registered Atari Dealer and she has a hard time getting them as Atari has been selling them faster than they can get IBM to push them out the door.

DA's Vektor had a number of votes. But I was in a quandry of how to split
of the files. I could have included many files that only got a few votes but
this would have made the list large and not exactly representative. I decided
in the end to go with truley popular files. So if I had had enough submissions
for graphics applications (by people other than reps of owner ;)) it would
have easily found itself on the list. But I didn't have those votes, so
instead of making numerous commercial lists with 3-4 titles, I opted for one
large list. Hope this answers your question.

There is a function in mintlibs called tfork. It takes a
pointer to a function and a long as arguments. It will start another
process using the same code and data. The child will start at the
function you provide and be given the long argument you provide.
There are just two problems. Files opened by the parent won't be
opened for the child. And, the mintlib readme file says that some
library calls such as malloc need to be wrapped in semaphores.
I wonder if simply wrapping malloc in a semaphore is enough.
You have several threads calling malloc in a nice orderly way. malloc
calls the library func sbrk, and eventually sbrk gets another chunk of
memory from the system using Malloc. Now there is a chunk of memory
in general use which is only owned by one of your threads. What
happens when this thread terminates?

Jason

There are several gateways between the InterNet and the MausNet, simply mail
to Siegfried_Hartmann@b.maus.de and tell him your problems.

I'm only wondering why you are still using the old HSModem 1.05. Harun has
written a new serial driver (the archive is called HSMODA02.*) and developped
a card adding two 115KBaud FIFOed(!) serials to a standard ST.

2592. Cleveland Free-Net looking for Programming SIGOp

Newsgroup: comp.sys.atari.st
Date: 1994-02-08 22:58:49 UTC
From: xx004@cleveland.Freenet.Edu
Message-ID: <2j95f9$451@usenet.INS.CWRU.Edu>
Source record: 193548

The Cleveland Free-Net Atari SIG is looking for a Programming SIGOp
to maintain the Programming/Developing Forum.

A minimum of 5 hours per week is required for the position.

This is a non-paying position.

Since there are now over 100 Internet connections to Free-Net, it should
be relatively easy to maintain even if you are from an other area than
Cleveland, Ohio.

All SIGOps have unlimited time access.

The individual we are looking to maintain the 16/32-bit Programming/Developing
Forum must have a strong programming background and enjoy answering
questions. The individual should also be willing to help build a programming
library of helpful text-files. And perhaps start programming projects
where members of the forum can work on projects together.

One of the reasons we are interested in having a strong Programming/Developing
Forum here on Free-Net is because we feel that a computer starts to die
only when no new programs start being created for it.

This is everyone's chance to help each other to create software for the ST,
TT, and Falcon030 computers.

If you know programming and are interested, please contact the Atari SIG
at: xx004@cleveland.freenet.edu

THANKS.

Len Stys, SIG Manager
Cleveland Free-Net Atari SIG

Source record: 193353

If anyone wants to make an offer, I have a 1040ST with color monitor
for sale. Comes with all original manuals and some software(games):
Starglider, Dungeon Master, Empire, and a few others. I'd have to
check first to see if I still have them around with documentation.

If you're interested please email me back.

Mike

2598. Re: CD PLAY program?

Newsgroup: comp.sys.atari.st
Date: 1994-02-09 01:17:22 UTC
From: rgivan@cix.compulink.co.uk
Message-ID: <CKxnKy.E9y@cix.compulink.co.uk>
Source record: 193354

>I need a program that will play CD's. I tried cdplay.lzh, but although
>the busy light on my CD-ROM drive lights, no sound comes from the headphone
>(or RCA) connections.

I've got a NEC CDR-37 drive playing from my MSTE even as I type :-)

I'm using the unregistered version of AUD_CD20.ACC. Despite the CDR-37
being one of the 2 supported drives I still had to write my own config
file:

cd37.dat
---------------cut----------------------
p
10 216 1 1 0 0 0 0 0 0 128
s
6 1 0 0 0 0 0
a
10 218 0 0 0 0 0 0 0 0 0
e
10 217 3 0 0 0 0 0 0 0 128
q

---------------cut----------------------

The only point to note is that the play (p) command always starts from
track one, so I've put the resume after pause command on the eject (e)
button as my CD-ROM doesn't auto eject.

>It's a very simple procedure, from what I've read. Guess I'll have to
>do it myself. Any clues?

Get hold of a copy of ICD SCSI.PRG. This is commercial, and the latest
version is on the ICD Pro driver disk. Apparently a rather old version is
available for ICD's BBS.

This program allows you to send raw SCSI commands to *any* connected drive.
Its a bit risky as you can accidently format your hard disk instead of
playing a CD ;-). It also doesn't allow you to do anything else at the same
time. Its great for figuring out exactly what SCSI commands your drive
responds to though.

Also get hold of a SCSI spec for your drive. NEC (UK) very kindly sent me
a photocopy of a 70 page SCSI 1 (CD-ROM) spec, just by asking for it. Whats
more I bought the drive remaindered off, and they knew that!

:-)

>the question of *why* you'd want to do this...)

Although in the MiNT way of doing things, code is never relocated after the
initial load, so this is a bad example. Better would be one using a regular
data pointer in the union. Even so, this problem can be attacked by comparing
the value of the field to all the existing data regions. If its value resides
in a data region, it should be relocated. Yes, in the truest sense, the problem
is too ambiguous to be perfectly solved, but pragmatically speaking, when will
these situations occur?

>>>MiNT does allow code sharing, for processes which are specially written to

>> and how is that done?

>The code is specifically written to avoid absolute address accesses. All
>accesses are done relative to a register (then, to relocate your program,
>all you have to do is change the value of the register).

All data accesses are relative to register a4. Text (code) references are still
allowed to be absolute. The program must not use self-modifying code, either
(but that's a good rule of thumb for just about anything anyway).

To avoid running out of the 64K of addressable space, store all arrays,
structures, and other aggregate data types in a "blockdata" or "blockbss"
segment, and store their addresses in the regular data segment. The process
memory map then looks like:

...
blockbss
bss
a4--> data
blockdata

```
...
text

Then e.g. the assembly language declaration of "char buf[1024];" becomes:
.bbss
buf: ds.b 1024
.data
buf.ptr: dc.l buf

and references to the array buf which used to use (e.g.):
lea buf,a0
become
movea.l buf.ptr(a4),a0

etc...

(The above is a slight simplification; it's best to set a4 to 32K above the
start of the data segment, and subtract 32k from each symbol reference, to
allow getting the full 64K of address space in a linear fashion.)

>and support etc.

Hmm... of course, such stuff is always in the eye of the
beholder, but personally I find it hard to see why an OS that

* does cooperative multitasking only
* has no sensible concept of a console (stdin and -out)
* uses silly file "type" and "creator" info to mask off files
from the fileselect box, so innocent users are shocked to death
because they can't see their file anymore on a regular basis
* refuses to do anything sensible with a disk after screwing it
up (I recently had to take care of a user who wanted to recover a
file from a corrupted disk. After endless messing around with all
kinds of odd tools we had a huge collection of recovered files,
but none cold be loaded by a Mac program, so we finally moved
them to an Atari, where the ASCII text was easily restored by
replacing a couple of control characters with nothing)

should be called "better" than TOS or even MultiTOS.

From: boyd@gauss.math.fsu.edu
Message-ID: <2j9glq$ab5@mailer.fsu.edu>
Source record: 193359

Are there any known hardware problems with early MegaSTE computers? The one
I am looking at has TOS 2.06 and a DSDD floppy. The newer TOS was added
later. My understanding is that the AJAX floppy chip coincided with the
1.44mb floppy introduction (roughly), and offers no advantage for DSDD drives.
I have also heard that the 1.44mb floppies have problems with some
self-booting game disks.

Thanks in advance.

>
>please e-mail me (petep@info.isbiel.ch)

Yes, the Falcon030 can do that (provided the hard drive is fast enough!). In
fact, the Falcon030 comes with a program called Falcon-D2D which will record
one stereo track at a time and allow you to overdub (though only at sample
rates up to 32kHz -- but 32kHz w/ 16-bit audio is quite decent!). However,
the overdubbing WRITES OVER the previously recorded file, so you should make
a backup of the original file in case you make a mistake while overdubbing.
That's only with Falcon-D2D, though. There are other direct-to-disk programs
that will do bigger, better things.

> until Apple, IBM and Motorola decide to sell other manufacturers the chip
> (which won't come for a long while, I'm certain).

Sheesh, Delphoids...

The _first_ PowerPC-based Macs (which is what I was talking about; I'm
pretty sure I even said it) are just fast Macs. They even run System-7.
And all your Mac applications. Faster.

The _first_ PowerPC-based workstations are just fast RS/6000 boxes. The
run AIX and all your AIX applications. Faster.

PowerPC is a _very_ important first step towards chipping away at that
huge monolith named "Intel" and injecting some fresh (and FAST!) blood
into the cheap "PC" CPU market.

The PPC-601 chips are available _now_ to manufacturers. IBM, Motorola,
and Apple are being _very_ open about this (another Good Thing, though
it's still doubtful whether Apple's machines will ever be able to run
anyone else's operating system directly... ie, boot UNIX on it instead
of Mac System).

You have to start reading the Makefile, the next steps depend very much on
the flavour of your unix system. Typing 'make sysvr4' or 'make bsd' is
pretty much all you have to do for those two unixes. If you're on some
kind of exotic system, you better ask a local guru or the sysadmin.

> Anyone got the executable(s)?

This would be a lot easier to answer if you had supplied some information
about the machine and the os you're running :). Also I don't think that
comp.sys.atari.* is the best place to ask, you have better chances of
finding the executables in the comp.sys.<your_machine> hierarchy.

DOWNLOADING FILES, Instructions:
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR] OR use the number address,
NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each
file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the
programs
were intended, or in UNIX ....

- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

Message-ID: <CKy4L1.LoB@cix.compulink.co.uk>
Source record: 193369

Just a short query or two. When my Falcon had 4 megs of memory (onboard standard) I had 4 megs of memory free, now I've upgraded to 16 megs I have only 14 free.

From this am I correct in saying that the original memory was actually 6 megs, with 4 mb accessable, or is the missing 2 megs of memory used to keep track of the rest of the new memory?

As everyone can tell I do not know a lot about the Falcon's hardware, and this one has kept me wondering for a while.

On the same track what should the memory of the Falcon now be referred to, 16mb or 14mb? As I tend to refer to it as 16/14mb which confuses everyone I talk to.

Apparently the ST is not the only machine with a large hobbyist programmer following. And, apparently, Apple is even worse than Atari re: revealing info about system internals. I guess Unix-ish support is so tough to get otherwise that it was easier to port an Atari OS and run GCC than any other route...

[list deleted]

>should be called "better" than TOS or even MultiTOS.

What makes people think that is because Apple has a better interface to the user. It looks better, offers more as-is and it works. Sure, we can have long filenames, links etc. but only if we give it some serious work. Atari's Desktop shell got considerably better with the NewDesk, but it still is lacking. This is strictly not OS stuff, but that's the part the user sees and uses.

Unlike other Bitmap Brothers games (Speedball2, Xenon2, Cadaver) Their most recent release Chaos Engine does NOT work, no matter what you do. The best i've done is to get it to go through the intro sequence - it then hangs up :(

I have seen reports that a Falcon version will be available at some point though....

I'm not so sure - the most recent port of MGR by Bammi uses the VDI quite nicely (works on my f030 just fine at 800*600*16).

>cursor background not being updated by the VDI during graphics
>ourput, the VDI line drawing algorithms not matching the X
>specifications and so on.

Mouse cursor support is a minimal problem to say the least - implementing a custom cursor would be easy (look at the game Captain Blood for an example).

>I've never done such a project so far, but I would guess that for
>porting X the most sensible strategy would be to do a VDI based
>port first, and then rewrite certain graphics output routines,
>whether in C or in assembler.

There is a lot to be said for that, although I do think that rewrite's of 'certain output routines' are unnecesary, as NVDI provides a nice turn of speed.......

>As X uses offscreen pixmaps a lot, it would hardly be possible to
>get away without having to write the primitives to manipulate
>them anyway, and if you can draw on an offscreen pixmap, you can
>as well apply that to the screen.

NVDI, SpeedoGDOS & FontGDOS all provide support for off-screen bitmaps. There is also a PD program called ENHANCER which provides the same OBM support as NVDI (check for the EdDI cookie to see if this is available). I haven't used then GDOS ones, but the NVDI OBM's are a dream to use (watch for them in the next release of CLA).

If you are going for it on a native (MiNT based) X-windows port, then it's reasonable to specify that users HAVE to have one of the above.

Probably because a) 200 ukp doesnt exactly buy you much of a PC , the
only PCs you can by in the high street seem to be
the very high spec ones from 1000 ukps upwards.For
people buying their first computer the ST still looks
very good value.
b) The A600 which is in the same price range is perceived
as nothing more than a toy.

Just my 2 pence worth.,

Has anyone had any problems with the Mega power supplies. It all started when the fan wouldn't turn and i had to flick it to get it going, and then the computer would go on. Well it took longer and longer to get going until it would take about 30-40 minutes to 'boot up' I believe my power supply is shot. I tested the fan and it works and i can't seem to find where on the power supply the problem is. I'm reluctant to send my computer to atari in canada, or the states, because i've heard horror stories about not getting them back!
If anyone has any suggestions, retailors, places that deal with atari's still, please let me know.
Thank you.

I do know about the disk fixes and how to change the DESKTOP.INF file.
It's the hassle of having to change it (DESKTOP.INF that is) or
forgetting to use the STEFIX.PRG. It's really just general laziness.
I received some mail from Rodger Sheppard saying that I could patch my
own roms with Eproms, ie copy the the tos 1.62 to a new set of roms.
Thanks Roger.

Being able to monitor what you've recorded while recording something else
is such a basic requirement that the Falcon would seriously naff if it
couldn't do it. Cubase Audio can play back eight tracks at once. As no-one
mentioned otherwise when reviewing it, it must be able to playback a mix
of the other seven (say), while recording the eighth. In fact, if dropping
in on the eighth, it should play all eight until the drop-in point. It
should be remembered, though, that Cubase apparently relies on heavy RAM
caching of the data (14MB is recommended), so you may need to do something
similar if using more than a couple of tracks.

I was expressing surprise that Vektor didn't "walk it" on votes, not that you didn't make your charts long enough to include it!

ST Review confused the hell out of my local newsagents (who stopped stocking
it when it was no longer SoR). They get it in specifically on my request,
but when an issue arrived on 3rd February, and had February on the cover, they
thought is was an old issue. Quote: "No magazines ever come out in the
month of the cover date!". I think things got confusing for them when they
started doing thirteen issues per year, and had a Christmas issue between
December and January.

The issue with Calligrapher should be out on 3rd March.

Approximately always :-)

But there is another problem: tagged pointers. That's why dumping
emacs is such a pain on the atari (on the TT with memory protection it
is a bit better, since all memory blocks are aligned to 8k
boundaries).

The Falcon sounds more and more promising... How much RAM does the DSP have exactly? Anyone know? Also how practical is it to use Normal RAM with the DSP? Do you have to copy it from DSP RAM to Normal RAM?

Any info would be gratefully received....

No, it does not. Thanks to the excellent copy protection method, you get a
lot of disk grinding noises and then the desktop.
Even Backwards on best compatibility does not help.

>There is No demand for Atari Computer products at all...
>
The STE would have been an Amiga Killer, because at the time of release, the STE cost 299 pounds and the Amiga 500 cost 399 pounds, and there were more ST owners. Unfortunately Atari didn't tell people about the STE, there were vast compatiblity problems. Lack of STE enhanced programs at the time didn't help the situation. Basically It's Atari's (lack of) Marketing Skills which has buggered things up.
Shame really.

Come on! A Mac with a comparable CPU power is effectively running at half
the speed of a Falcon thanks to the slow system 7. Also, there's no NVDI,
software is more expensive and you need more RAM. So a comparable Mac,
even with no DSP is still twice as expensive at the end of the day! Of
course the Mac is a very nice system to have.

5 VDI drivers

In this table I have listed distributor, errors and useable fonts.

5.1 Ink Jet Printers

Name	Date	Length	Distributor	Errors	Others	Fonts
				1	2	
BJ10E	20.11.90	45917	WT			NC
BJ10	20.11.85	45919	CL			NC
BJ10	28.08.91	45660	BELA			NC
BJ10	27.01.92	59715	FontGDOS,I		n	NC, OTL
BJ10	28.01.93	61428	Speedo		n	NC, SPD
HP_LJET	22.02.89	45512	BELA			p.g. LS
HP_LASER	25.09.89	36928	Atari,I			LS
LASERJET	06.03.91	54517	Atari			LS
LASERJET	27.01.92	60194	FontGDOS,I		n	LS, OTL
LASERJET	28.01.93	61907	Speedo		n	LS, SPD
HPL150	12.04.86	51541	wt			150dpi LL
HPL300	24.04.86	51541	CL,wt			LS
DESKJET	13.05.92	45637	BELA			p. LS?
DESKJET	14.05.91	46040	CL,WT			p. 300x600
DESKJET	06.03.91	54285	Atari,I			LS?
DESKJET5	14.05.91	46040	CL,WT			delta LS
DJ5	27.01.92	60600	FontGDOS,I		n	OTL
DJ5	28.01.93	62251	Speedo		n	SPD
MT90	21.12.90	44881	BELA			180dpi SP
PAINTJET	27.01.92	60005	FontGDOS		n	SP, OTL
PAINTJET	28.01.93	61648	Speedo		n	SP, SPD
PAINTJET	14.08.92	60173	I			SP, OTL
PAINTJET	13.10.91	45934	WT			SP

Note: The drivers named HP_LJET and DESKJET can be used for (HP-compatible)
Ink Jet and Laser Printers. The difference is in the transfer to the printer:
Packed (p.) or not packed (n.p.). 'Delta' means that the data is delta-
packed.

PAINTJET is a color driver with 8 colors.

MT90 is made by Patrick Dubbrow.

5.5 Screen drivers

The screen is (if VDI-functions are used) seen as an output device just like printer, plotter etc. That's why fonts for the screen can be installed in ASSIGN.SYS just like for printers.

Normally you won't notice this because the drivers are in ROM. But they can be used like printer drivers.

Note: For Systemfonts only (like the original ones) non-proportional fonts with a 8*8 or 8*16 matrix can be used. That's limited by the AES not VDI.

With newer AES (from 4.0?) it's no problem to use fonts of free choice (Variable AE_FONTID and AE_FONTSIZE in GEM.CNF, see [15]). Coders should make sure their programs can take that. (even like scrollbars of free width)

5.5.1 LineA

The so-called LineA-routines are subprograms of the screen drivers from the ST-series, to be treated as undocumented. This is the hardware-depending part of the drivers.

The attentive readers discovers it: Exchanging the drivers removes the LinaA-routines too. As happened with the TT for example.

So never use them!

Reading access can be taken to the LinaA-variables. But Why?

5.5.2 Setscreen & Getscreen

These XBIOS-Functions (mostly Setscreen) shouldn't be used.

But what am I talking. For those using them or those being tortured
because someone else did:

The Videohardware of 1040STE and Mega STE has a hardware bug. When defining
a new physbase with Setscreen (and if it's the same gotten with Getscreen),
it may happen that the screen is 'folded'. This happens due to the movement
of a register at a special moment, which is only allowed to be moved at
special phases of the screenoutput.

What has to be done?

Users: The programs NVDI and FALT_OFF stop this error. Or give this FAQ to
coder.

Coders: Either even don't use Setscreen.
If You use it though: If physbase isn't changed, the value taken
with Getscreen may not be used. Use the
value -1 than physbase!

5.5.3 NVDI and WARP 9

There are two often used programs to replace the ROM drivers: NVDI and WARP
9 (earlier QuickST). TurboST was distributed by BELA but isn't updated no
more.

If these are used once, one will never want to miss them: the Desktop seems
to be terribly slow. I will never want to work without NVDI on my Atari.
Others say the same about WARP 9.

A quick note by Mickey Boyd: Warp9 is inferior to NVDI in every way I can test.
NVDI has GEM graphics 3 times faster than Warp9! NVDI and Before Dawn are
better than Warp9 (Warp9 has a screensaver built in).

NVDI uses strongly optimised drivers for the ST- and TT-resolutions. Sadly I
don't know which drivers are used by WARP 9.

NVDI is available from Behne & Behne and contains not only the drivers but a
GDOS and a manual describing exactly all VDI-calls.

WARP 9 is available from CodeHead.

Due to this NVDI is spread in Germany and WARP 9 in the US

5.6 Other drivers

Name	Date	Length	Distributor	Errors		Others	Fonts

T_OFFICE			wt			98/196dpi	SPD
_IMG-0300__	_________	_______	_Reschke,wt_	_n_	___	________	LS________

ING-0300 can be copied (non commercial). The other IMG-0??? drivers are by SciLab. ZEBRA is for the Zebra Labelprinter.

5.6.1 Memory drivers

A memory driver doesn't do anything else than a screen driver (see [14] and [12]). The output simply goes to another area of memory.

The normal v_openwk binding doesn't have all parameters needed to open this driver. If not included to the language this binding must be made by yourself. A listing is found at [14].

The memory driver listed above can produce b/w output only and has a logical resolution of 300dpi. The (Matrix-)drivers tested by me have no problems with fonts installed that are for other other drivers. The memory driver should take screen-fonts - due to the 300dpi.

Problem could appear because of the aspect-ratio (relation of pixelwidth to height) - normally not similar to the screen resolution.
Due to this circles can be displayed as ellipses.

With NVDI version 2.5 the output can be redirected to offscreen bitmaps. You can make any GDOS outputs to this bitmaps and copy the result in windows on the screen.

5.6.2 Plotter drivers

A HPGL driver seems to be distributed with the program DATA. On PD-Disk ST 458 (German PD-series) is one too. If I get more about it I'll include this info here.

5.7 What's missing

I don't know drivers using the abilities of the following printers:

o Epson 360dpi Needleprinters
o DeskJet 500C
o DeskJet 550C
o LaserJet IV

>The Falcon sounds more and more promising... How much RAM does the DSP have exactly?
Anyone know? Also how practical is it to use Normal RAM with the DSP? Do you have to copy
it from DSP RAM to Normal RAM?

From my experience the Falcon DSP has:

32Kwords of X memory (96kbytes)
32Kwords of Y memory (96kbytes)
32Kwords of P memory (96kbytes) - although I'm not 100% certain of this one.

The RAM is VERY fast with no wait states (well done Atari for once).
For most things this is enough, but a little more would have helped.

There are two methods of transfer, one is by using the Sound DMA which gives
about 20K/VBL transfer and the other using the Host Port which gives about
50-60 K/VBL ...(50hz). You can use both at once, but be warned transfer by
DMA is quite difficult - I still don't have a satisfactory method , Can anyone
help me?

|> If it's cheaper than the 68882, you can skip the last question ;-)

Of course a 68881 is cheaper than 68882, because the 68881 is an older version.

BlowUp030 works in the same way... There is a small adapter which plugs into the monitor port of your Falcon and from it a small cable goes into one of the paddle-ports... No need to open your Falcon at all...very neat and very tidy!

Why would you want both SB and BlowUp?

I've seen NetBSD for the Mac, and I understand perfectly why someone wanted
MiNT. NetBSD is quite primative at this point, and requires continuous
tweeking. It is a Unix hacker's diversion, currently (abet a fun one).

Well, I think Brad ported it because netBSD only runs on a select handful
of macs. For instance, it won't run on my mac II. MacMiNT, while
not completely stable, is pretty usable on it.

Eric Barber (sizex@bnr.co.uk) wrote:
> is there such a thing? thanks, Eric

There is an old port of GNUchess. Also, there is a free/shareware graphical chess game for the ST that achieved some fame when it was first released (this was some time ago). My memory blurs, but I seem to remember that this game used some original algorithms that were found to be better than a professional proprietary chess computer (that cost many times as much as an ST at the time, and could only play chess). I _think_ it was called Krabat Chess.

Of course, there could be other PD chess players that I don't know about. I have seen Chessmaster 2000 (or was it 3000?!?) for the ST, and it seemed to be a good one (neat voice synthesis, good graphics/user interface). It is commercial, but could probably be found quite cheap used or in a bargin bin.

This kind of question keeps coming up! I can't find it in the FAQ,
soooooo, perhaps a FAQ update?

Anyway, the top 2Mb in the Falcon's normal RAM address space is 'hidden'
beneath the TOS ROMS. This is to maintain compatability with the ST
since the ROMS appear at the same place. There is no (known <grin!>)
way to get that lost 2Mb back so your Falcon with 16Mb of RAM is,
effectively, a 14Mb machine. Crazy? Yes. Typical of Atari? Yes again...

Cheers, Steve

|>

By the way my posting was much more imprecise:
-AEO_0220.txt is about 220 Ko of text-file.
-The 15s has been achieved on a Falcon030 but that's not the point.

In fact it can compress within 1s even on a ST but the resulting size wont't
be the same. I must add that both compression rate & time required are exponential.
Id est you can either pack very quickly (rate 95% or 90%) or achieve better
rate (max 20% of original size) with much time. I think that the product I'm testing
isn't bad at all, it is always at least faster than Ice Packer 2.4 and the resulting
size is comparable to Atomik packed file... And it is real-time packing !!!!

To use such tool, for normal day use you choose a low offset while
you can optimize your hard-disk with a very high-one (decompression time is always <1s).
Its release date is nearing so you'll be judge ..

I call again, is there anyone on the net who owns DATALITE (by Hisoft)
and could evaluate time and size results for sample files ?

>From this am I correct in saying that the original memory was actually 6
>megs, with 4 mb accessable, or is the missing 2 megs of memory used to keep
>track of the rest of the new memory?

Weird one this.... Apparently the two Megs missing are where the ROM is (this was done to maintain compatibility with the ST).... So effectively it is 'lost'. The 4 Meg board DID have 4 Meg (not 6), as this problem only becomes apparent if you have 14 Meg.....

Don't know if there is anything you can do about it.... I'm not technically minded..... Maybe it's possible to reconfigure it as TT RAM, I don't know.... somebody who has a Falcon may be able to help you more.....

Bye for now...

The DSP in the Falcon has 32K _words_ of 32MHz zero wait-state (ie damn quick)
SRAM. Since a DSP word is 24bit this equals 96Kb of RAM.

The DSP can only access it's own internal memory and this 32K words of memory, it
is not possible for it to directly access any other memory in the Falcon. The
same is of course true for the 68030 not being able to access DSP RAM.

However this ain't so bad since the DSP has some very nice configurable serial
ports that are connected up to the 68030. Using routines built into the OS and
some very simple programming at the DSP end you can transmit 1 - 1.5 Mb/sec from
68030<->DSP (There was a post earlier about exact tested amounts I think).

Anyway the whole DSP thing is very sexy indeed...

I think the confusion here comes from the fact that each enhanced joystick port can accept _TWO_ joysticks. The joypad however needs the lines that would normally let you use two joysticks to work. So although the joypad takes up two joystick _places_ it is only one joystick port... I think...

Hey I reckon it makes sense :)

2660. Problem with ICD Link

Newsgroup: comp.sys.atari.st
Date: 1994-02-09 18:58:34 UTC
From: sasmesba@kingcong.uwaterloo.ca
Message-ID: <CKz0pn.6B5@watserv2.uwaterloo.ca>
Source record: 193316
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I am having a problem with a new ICD link, I'll try to detail it:
(First not that I am upgrading from an Advantage+ and using UCD util 6.2.0)
The Link was working for two weeks fine and dandy. I still do not have a
manual for the Link since the store hasn't gotten a new one yet)

1. I bought the Link to replace my Advantage+ so I could sell the + to my
friend along with my Seagate 296N hard drive. I also have a Quantum LPS105.
I just bought a Maxtor 213SY to replace the 85. I first hooked up the Link
with the 85 and 105 before I bought the 213. It worked fine (85 was ID 1,
105 was ID 0, 105 at end of cable with terminating resistors in.

When I hooked up the 213 as well, ID 2, resistors removed, it all worked fine.
I then copied my important stuff of the 105 and 85, repartitioned, etc and
set up the 85 for my friend. I then took out the 85 and left the 105 (ID 0)
and 213 (ID 2) with 105 on end of cable and terminated. The computer no
longer recognizes the fact that there is a host adapter. I put the
advatage+ back in and it works fine!. I changed the ID of the 213 to 1
and it works fine with the Advantage+ but the link does not seem to be
there.

I took it to the dealer, they tested it and it works fine. I took it to
my firends house with the 85 (terminated and alone on the cable) and
it worked fine there too. Is it possible my Mega STe is not supplying
the proper power. To hook up the link to my existing cable, I crimped
a 50 pin female centronics directly to the cable, does the link require
terminators at that end too? The advatage doesn't need termiators there.
I think this might me my problem but I'm not sure. Anyone else with a
similar experience have anything to tell me? Or anyone with a link
manual?

Thanks for any help,
Sam

>two/three things at once.

it must be a pretty small window your are dealing with, 320x200 TC takes
128k, quite a bit more memory than the DSP has. Certainly not enough
to double buffer. I could see the DSP drawing scanlines that get sent
to Host Ram (offscreen). I've seen your demo's, and that is gouraud
shading, but it looks nowhere near 1M pixels. (unless theres something
cool that you haven't shown us yet :)

Also, the DSP<->Host interface is only around 1 meg/sec isn't it?

that gives around 8-10 fps fullscreen 320x200 TC..eh not bad I guess.

Hmmm, if you can crank out that much, maybe DSP texture mapping isn't
as far fetched as i thought.

Hmmmm, time to get out the draing board.

Sorry, but this is wrong either. The Medusa T40 is swiss made, the GE-Soft
Eagle being a different (and yet unreleased) machine.

2666. GCC2.5.8 Problems w/ MinixFS

Newsgroup: comp.sys.atari.st
Date: 1994-02-09 19:46:06 UTC
From: Patrice.Lacouture@aedi.insa-lyon.fr
Message-ID: <2jbehu$ku1@cismsun.univ-lyon1.fr>
Source record: 193322

Did you ever note that the GCC 2.5.8 compiler released recently in the binary form at a.a.u.e does NOT correctly cope with MinixFS long filenames ? (Older versions may not too, but I didn't notice it, as I just installed my Minix partition yesterday)...

What's wrong ?

It works correctly with long filenames, or with case-sensitive filenames, but as soon as there are more than one '.' (point) in a filename, gcc-cc1 does NOT find the file any more (it just says 'xxxx' not found).
You rename it, removing the '.', or replacing them by ',' and it works very well.

I hear you from here: "Why the hell does he want to use filenames with more than one point in ?"

Answer: tools like YACC build those types of filename (xxxx.tab.c).
It's eazy to fix by including a 'mv xxxx.tab.c xxxx,tab.c' in the makefile, but I switched to MinixFS just to avoid having to do such things...
And it is still annoying...

Just to be curious, I tried Pure C (pcc.ttp) with such a filename. It just hangs ! It works very well on Minix FS, as soon as you don't give him "strange" filenames...

By the way, what are the 'good' tools to have when you use MinixFS ? (I mean useful little tools / tricks). Can a used-to-it answer ?

Thanks for any help...

Bye

>with the DSP? Do you have to copy it from DSP RAM to Normal RAM?

According to Hisoft's 'Modern Systems Programming' book...

"The Falcon DSP is provided with 96 kbytes of RAM on board, organised as
24 bit words. All this can be used to store programs and sub-routines in
the P memory area"

And yes, you copy from DSP Ram to Falcon RAM and back again... there are
several XBIOS calls which allow you to do this in a number of formats. The
same book mentions a speed of 1Mbytes a second (in theory), although I'm
unclear as to wether this means from Falcon Memory to DSP memory as well
as transfer between devices (CODEC->DSP->DMA, for example).

As you can see, I'm hardly au fait with the DSP but I hope this will
promote others more knowledgeable than me to step in with some comments,
as it's a topic I'm very interested in.

On a tangent... from even a brief reading of either the book mentioned
above or The Atari Compendium it becomes increasingly clear that the
question being asked (in here, as well as other places) should not be 'can
the Falcon do such and such?' it should be 'when will the programmers
start providing such and such?'.

Do they have a working acronym for it yet - this is very important for the creation of this type of software. What about 'Mac is Now Tos' [g] - not recursive, I know, but you have to start somewhere. Is there a member of the acronym design team in the house?

Well I wrote that particular demo when I didn't even have a Falcon (I did
it on a friend's machine in one weekend...)

As for the 1million pixels per second, this is 16 WHOLE DSP instructions per
point (and remember that is 48 operations if the parallel nature is exploited
fully).

Perhaps there is something cool that I haven't shown yet!
I'm working with several other 'famous' ST(E) demo writers on a Falcon demo,
lets just say that it will be quite special.

From: lancer@jaguar.WPI.EDU
Message-ID: <LANCER.94Feb9163540@jaguar.WPI.EDU>
Source record: 193331

How do I install an application in newdesk?

Specifically, I want to install file uncompressors to run when I click on a compressed file... ie: lharc.ttp runs with the argument -x on file foo.lzh when I click on foo.lzh...

I've tried the install application, but it doesn't seem to accept arguments correctly/at all... It runs lharc.ttp without the filename!

Is there a way to do this?

Perhaps it's like teradesk where you use %f as the filename in the argument list...

Thanks for any help!

>manual?

Looks IMHO like the LINK is not being recognised unless the '85' (ST296N?)
is connected, perhaps this drive was supplying the +5V required by the
LINK, which gets its power from pin 26 ('TERM POWER') on the SCSI bus,
generated on one of the disk drives and often supplied via. a fuse,
whereas as far as I believe the 'Advantage +' does not require to be
powered in this way.
It may be that the LPS105, although terminated, does not supply the
'TERM POWER' required by the LINK, and that this was being supplied
by the '85' before it was removed. Perhaps if you were to try reversing
the order of the drives, making the last drive the 213SY and terminating
that one instead of the LPS105, 'TERM POWER' may be available from there.
I had a similar experience with an HP 7959S drive, which I recall did
not supply 'TERM POWER' when terminated.
Another main point to note IMHO is that the LINK does not support
parity and requires that parity is disabled on any drives connected to
it, whereas I understand that the Advantage+ supports parity.

Hope this is of some interest,

Best Regards,
Brian

>suggestions?

You don't really need a SCSI-2 drive -- there are plenty of regular
SCSI drives that will transfer data fast enough. To get 8 tracks to
work, you'll need a pretty fast one, though -- I'd recommend getting
one that'll do close to 1MB/sec. or faster (plus a very quick seek
rate of 15ms or lower). There are some people who've even found 2.5"
IDE drives that'll do that, though 2.5" IDE drives only go up to about
250-300MB. Unfortunately, you can't really know EXACTLY what data
transfer rate you'll get until you hook it up to your system. I'll
ask some of the people who HAVE gotten fast drives, though.

Anyone know? Also how practical is it to use Normal RAM with the DSP? Do you have to copy
it from DSP RAM to Normal RAM?

The DSP has 96k of RAM, but has access to system RAM via DMA.

The Link gets its power not from the ST but from the ``termination power''
supplied by one (or more) of the hard disks. Most hard disks have a jumper
by which you can enable/disable the termination power line from the drive.
I would guess that among your hard disks, only the ``85'' is supplying
termination power. Solution: Enable this jumper for _all_ of your drives.
(Multiple power suppliers is O.K.)

When you buy the program they give a list of hard drives that get
all 8 tracks.

Otherwise I would suggest calling them although I think the L.A.
quake has affected them.

I am pretty sure the mentioned a maxtor 1.0GB disk that did all 8.

Off the top of my head you need faster than 12ms access and greater
than 1200Kb/s transfer rate.

8 tracks @ 16 bit (2bytes) @ 50khz (atari's sampling rate) = 800Kbytes/second
sustained so you need a bursty speed about 1.5 as fast.

Paul

ST> processor has little to do with the overall transfer speed, so,
does
ST> anyone have any ideas why I am operating so much more slowly?

Hmmm.... Which version of Kermit are you using... I know the old
one
has a max packet size of 96 bytes, so maybe you mainframe
version
is set to 1000, but you ST will only be getting 96 bytes at a
time,
if your using an old version for the ST...

Maybe worth checking the ST Kermit block size, which I think
is
SHOW PACKET ???

>Are there any known hardware problems with early MegaSTE computers? The one

1) Interference on the audio out during some shifter operations.

2) Picture jumping across the CRT during some shifter operations

3) Various High Density disk problems.

According to my dealer 1 and 2 shouldn't happen on the same machine as one
is due to one type of shifter chip and the other due to another. BTW I had
the second problem which was apparently fixed by fitting the *other* sort
of shifter chip. Well it certainly went away.

Anyway in reality both of these are fairly minor problems and rarely affect
use. The first one doesn't affect me even though I apparently have that
type of chip. The second shows up under MINIX and DevPakST, especially
under MONST when using the 'V' option to view the screen output of the
program being debuuged.

>I am looking at has TOS 2.06 and a DSDD floppy. The newer TOS was added

Sounds like you need to make the 213 bootable. Use 'ICDUTIL.PRG' (?)
to write the bootstrap loader into partition C: of the 213. It worked
Ok before because the 85 already has a boot loader. (You only need
one drive with a loader, more than one is quite safe, though).

>I took it to the dealer, they tested it and it works fine.

Your dealer should have spotted this problem. Did they boot it with
only your drive/link on their hardware? I'll bet they didn't!

>I took it to
>my firends house with the 85 (terminated and alone on the cable) and

ICD's DMA->SCSI hardware is remarkably tolerant to incorrectly
terminated connections, so I wouldn't worry on that count.

So, basically, just run that hdutil.prg to make your 213 bootable...

Cheers, Steve.

] wondering does anyone have the UK version of TOS 1.62 that
] they do not need, ie their machines been wrecked or such like.
] The med res bug is getting to me and I want to fix it without
] buying TOS 2.06.

Preferably if you have a hard-drive but not necessarily, just get the files 'STE_FIX.*' and 'POOLFIX3.*'. These 2 files are the .02 in the version number! And, if you don't have a hard-drive (although _everyone_ does), TOS 2.06 is a bit of a waste really, as without a Hard-Drive a great deal of the new features are lost or severely limited! (Or, made unusably (!?) slow!)

Apparently they do, but PC's rarely take advantage of this function.
On my Amiga, I have a hard drive subsystem that allows the use of an
IDE or SCSI drive. I chose IDE because it was less expensive (especially
at the time of purchase...over a year ago). I never had to tell
the software anything about the drive, other than that it was IDE.
(The drive is a Maxtor 7213A, BTW).

George Frajkor said:

"(b) tell us if the monitor can be used either as color
or monochrome without rebooting or complications?"

The Commodore 1084 supports only a 15.75Khz horizontal scan rate and CANNOT support ST hi-res (mono) output, which requires a H-scan of more than twice that (35.5Khz, as I recall).

Do not be fooled by any references to the 1084 supporting "640x400 resolution", as this refers to the interlaced modes available on the Amiga.

The 1084 can, however, be used as a substitute for an SC1224 or SC1435 in low and medium resolution on an ST.

The original 1084 used a DIN-type input for RGB. If that is the model you have, I do not have the pinout info.

The Falcon's hardware Operating system reserves the memory for maximum ST
compatibility. It is a shame that we cannot upgrade to only 8 megs as the
hardware does not allow for it. We recently aquired Wizztronics upgrade
board which allows for use of 4x32 simm 72 pin modules. Which board do
you have?

Any Hard rive with specs of 11 milliseconds should do the trick.
We are awaiting for our store demo copy of Cubase Audio for our Falcon.
Unfortunately the quake in California has delayed our shipment.

Dsp uses 32k. We do not know of a way to copy normal RAm to the DSP.
There are several programs now that access the DSP and the speed is
significant. Try and obtain a demo called FRAC_DSP and you will notice
the difference!

The Eidolon. Lucasfilm made the fractal graphics system for
"Rescue on Fractalus" and used it in two games in different
ways. Fractalus had you flying over the surface, Eidolon turned
it upside down, and Koronis Rift put you on the surface.

Redoing these would be great; fun, uncomplicated games.

Hi

i just downloaded the latest version of Gemview (3.01) from the atari archive
and i seem to have some Brucey Bonus programs with it. As i don't speak the
lingo, I don't know what they do. They do not, however, seem to be esential
for running the main program.

VDI_FIX.PRG presumably fixes my VDI, but what's wrong with it?
WINX.PRG something to do with having lots of GEM windows
WINNI.PRG ?
GEM_VIEW.ACC ?
GEM_XACC.ACC ?
GEMSHOW.PRG ?

Can I delete these and still get along OK?

Hey there all of you out there!

Just thought I'd pop in here and say hello.

Up until last week I ran a BBS in Wellington NZ on an Atari Mega STE called
Z*Net South Pacific. We brought Atarinet into NZ and Australia with the help
of Bob Brodie and Bill Scull.
The board has now closed but Atarinet lives on via Christchurch.
I'm now looking after ICONZ.CO.NZ and living on a daily diet of Internet.

So if there are any of you that know me from the Atarinet area say hello!

>Shame really.
>
Before the Atari STE was released, there were plans for an EST. This was
apparently better than the STE, but the designer left Atari at the last
moment. I have heard from an ST magazine recently that in 1988, a prototype
STE was built which had a 68020 processor, and lots of other goodies the
STE doesn't have. This was never released because it seemed to be too
expensive.
I personally think that the STE's main problem was being overhyped by
the magazines. Atari never invented the term 'Amiga killer'.
When the STE eventually came out, there were several games that were
incompatable. Most of these games would actually work on an STE, but
Atari had installed a diskdrive that could only read 82 tracks, and
some games used tracks on their disks higher than 81.
Quite a lot of the software that wouldn't work on the STEs was
re-written to work.
I personally think that the STE would have done better if it had not
been for ST Format and New Computer Express.

There still isn't much software that takes advantage of the extra
hardware, but I have written some games that take advantage of the
extra ports on the side to add four extra joysticks to my games
for STEs.

PS. When they said that ST production would start again, was that
STFM production or STE production.

AE.

Yes, i think that it would be possible. but could someone give me more detailed
facts. i will use a standart 4mb falcon030 with one external scsi-harddisc, but no
accelerator.

- what is the highest possible sampling freq.
- what is the highest possible data transfer rate (with/without MULTITOS)
- is it possible to use simultaneosly the dsp for effects
- ....

on what else should i think specially?
do you know some good literature about that kind of problem?

Date: 1994-02-10 11:31:05 UTC
From: se1ap@dmu.ac.uk
Message-ID: <1994Feb10.113105.19697@dmu.ac.uk>
Source record: 193222

I've recently got a copy of Octalyser STe and was quite amazed to see it was using a new technique that gave an extra 16 pixels in the left border in low rez on an STe. This routine is interupt driven, and I'm thinking of hacking it out, the authors of Octalyser got this technique from some other guy. I can't remember his name but he deserves a pat on the back.

Anyway, I had been thinking about doing interupt overscan for years, but I never bothered trying. Now I don't see why it shouldn't be possible to do a fully overscanned screen running on interupts. This would be STE only (or a separte version for the FM) so that you only need to worry about the MMU and shifter that is in the machine. Obviously you woudn't be able to use very processor intensive commands such as MOVEM etc. when running the overscan or it would ruin the timing(unless we did a huge wait).

I reckon a routine like this could be done using 1/4 to 1/3 of the processor time, does anyone have any thoughts or ideas? I'm going to have a bash at it in the near future anyway to see what I can come up with....

> the poor Intel combined with everything else that is going on!

Don't get your hopes up... The Doom developers are working on a Jaguar
version, and that's it as far as Atari goes. They've ever said they
hate the Falcon they were given to develop it on... not surprising given
that Doom was originally developed on NeXTstep for Intel.

I would imagine that the Jaguar version would have all those cool
networking features (pending a jaguar phone/network extension).

Message-ID: <760921363.AA04602@byte.bbs.no>
Source record: 193261

>1) Interference on the audio out during some shifter operations.

The noise on the DMA digital sound (sparcling) and the "flipping" of
the screen around the left border is due to a "not so good" GST-Shifter
chip. Can be fixed by installing a chip from a STE or some patching.

>2) Picture jumping across the CRT during some shifter operations

This is really the same problem - see above....
I had both problems on both my MEGA STE's - and changed the chip

>3) Various High Density disk problems.

Some older machines can't use 1.44 MB disk drives.
Some newer can, but has no 1.44 as standard (and no AJAX too)
Some newer has 1.44 drive too, but still lacks AJAX

I myself has one of each (had to buy a new one to get 1.44 support)
(but the old one without 1.44 is perfect for running my BBS :-)

>CD> Well, I personnaly have an illegal copy of Spectre 3.0 (shame on me).
>CD>
>CD> Cyrille Dupuydauby, Backward's author.

>I guess this means I don't have to feel sorry if I don't register Backward.

I would like to precise that my only intent is to have Spectre 3.0 running on
a Falcon (unless V 3.1 exists and runs). I do not intend to spread it in anyway,
(by the way it is me who hacked it); by the way, I do not need it and I will
probably destroy my copy once the patch work will be done.
I am doing what D.Small should have done; I do not blame him, but I guess
many people would be very happy if they can keep their Spectre !

Feel free to not register Backward (by the way, who does it nowadays, except
a few I thank here), but please do not blame my decision.

Anyway, if the money earned is great enougth, I will certainly buy a SPECTRE copy.

I think such remarks are only poor excuses, I have actually spend hundreds of hours
on Backward, and with the money I have received, I am paid about 10cents an hour.

And finally, it is easy to say: 'hey, this guy seems a bit nasty, why could'nt I ?',
isn't it ?

Cyrille Dupuydauby, Backward's author.

Send any flames, they will be answered back.

> If thats true, I'm not sure why they wanted MiNT.....

The biggest reason why I like MacMiNT is that it can run on MacOS with other Mac applications. On the other hand, NetBSD/Mac runs on its own environment. No Mac applications on NetBSD/Mac.

>But regular users still owe the productive community financial support,
>if they aren't good enough to contribute in terms of software.

>My $0.02
Ok, this time I am off. I publically give up patching
Spectre (sorry for all guys who mailed me). I do not appreciate to
be the bad boy steeling money and publically showing it.

My Spectre copy has been destroyed. Too bad, at least, I
have gained some peace of mind and a blank HD disk.

I think someone could set up a trial to decide what would
be my punishment. Eating my computer perhaps, or even more interesting
freeware Backward.

By the way, I am so silly for not having lied and said something
like: ' I have a copy of Spectre 3.0'.

Cyrille Dupuydauby, to be hanged up soon.

2724. Piracy is illegal, don't you think ?

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 13:35:42 UTC
From: carrere@galaxie.int-evry.fr
Message-ID: <2jdd7e$4h@reseau.cict.fr>
Source record: 193227

Well, after the long debate that has followed my posting, I would like to make something clear:

- I do not encourage piracy in any way !
- I do not suggest ideas such: once you're a programmer you can still anything !
- I only intended to help people (I know it is very hard).
- I never intended to spread any kind of crakced software in any way.

Finally, I admit I though that having a TENPORARY illegal copy for patching Spectre was a good idea;
it seems that I am the only one who think so (but the mails I have received showed me that many LEGAL users
where interested).

What I have done: I will not pay for a software I do not use only for helping people (especially for
such a high cost one); so I have erased my disks. Sorry for those who counted on me, and I hope it will
calm the others down.

Cyrille Dupuydauby.

2728. Falcon sound input problems

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 14:25:14 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <94041.092515STIRRE31@MAINE.MAINE.EDU>
Source record: 193231

When I first got my Falcon, SAM, AFM, and D2D all worked fine with
a microphone hooked in. Indeed, prank calls have never been as
fun :) . Anyway, soon after, the input from the microphone started
working some of the time, but not all of the time. Last night, it
didn't work at all. I have no idea what could be causing this. I've
fooled around with the gain adjusts and tried two different
microphones. When recording in SAM, I just get a sample of a huge
black line. Sometimes it picks up on sounds, sometimes not. Does
anyone have any ideas why this is happening? I am hoping that I
am overlooking something (even if I am embarrased) instead of having
a problem with the microphone jack.
Any help is greatly appreciated.

2729. About to buy Falcon: Need advice first!

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 14:36:06 UTC
From: djs@jet.uk
Message-ID: <1994Feb10.143606.17618@jet.uk>
Source record: 193232

I'm ready to take the plunge and get the Falcon (just as it seems that the smart decision is to get something else!). A few questions still remain, and I would be grateful for any authoritative advice!

1) As I will still be using my SM125 for the first month or so, will the built-in Overscan help me get an improved resolution?
2) Why is there a 200GBP difference between 1Meg and 4Meg versions? (According to Systems Solutions). Wouldn't I be better getting a SIMM board such as FalconWing and nicking three of the four 1MB SIMMS from my STe (+ one more from somewhere) to get a 4Meg machine on the cheap? Is the Ste memory fast enough? (I like the idea of going down the SIMM route as it aids later expansion to 14MB).
3) Is there any advantage in getting an internal HD drive, given that I have pleny of space on SCSI externals? Apparently, most (all?) Falcons in the UK get no free software as the drives are fitted by the retailers, not Atari (I've already got MultiTOS and SpeedoGDOS anyways).
4) By plugging a SCART cable into the ST-Monitor Adaptor (which works according to SysSol), what sort of TV resolutions can I expect? All of the RGB monitor resolutions.
5) The CPU timing fix is done for free, but they charge 60GPB for the bass-boost/line-level fixes. That sounds like a lot of cash to me, what's involved in the fixes?

Thanks in advance for any useful info...

I've got some ST stuff for sale. I'm in the UK, so prices are quoted in pounds sterling. All goods are in mint condition, and come boxed, with manuals. I will also forward the purchaser's name and address to the relevant organisations for support if relevant and required.

OK, here goes:
Naksha Scanner (With TouchUp 1.9) £50
Lattice C v5.06.02 £50
Tempus 2 (Text editor) £15
Stereo Replay £40
Quartet V1.5 (Stereo) £15
Diamond Back II £10
Microsoft Write (with GDOS) £15
Formula One Grand Prix £10
External Floppy drive (with PSU) £25
Blitz Turbo £10

I'm also considering selling my 520STe, with 2Megs of RAM plus a Naksha mouse, all leads, manuals, box etc, so make me an offer.

All prices negotiable, delivery within the UK will be paid by me. Reply by E-Mail preferably.

Giles.

Opinions expressed here are my own entirely and do not reflect those of any organisation to which I belong.

> how it is to be used. Please send email to set me straight.

{I email'ed, but thought it might be of general interest as well}

Get the file starter.tos on atari.archive. It is a self extracting archive
(you just run it) that contains several decompression programs (arc, lzh,
etc.) and some instructions, I believe. I'm not sure what versions it
contains, but it should enable you to bootstrap yourself up.

To have the full suite, I suggest you get the following:

Arc 6.02 (last version of Arc that worked, to my knowledge)
Lharc 2.32 (lharc and lzh are equivalent names for the same thing)
MSA 2.3+ (Magic Shadow Archive)
Zoo (whatever the latest version is)
ST Zip 2.4 (nice one, gaining popularity, install it as an application)
UUE UUD (uuencode and uudecode, UNIX style utilities)

In addition to all that, you want to get an arc shell of some sort to make
it easy to extract arc/lzh files (the most common, though Zip is popping up
a lot). An arc shell is basically a nice front end to other .ttp programs.
I use ArcShell 3.1 by the Codeheads, but it is old and has some flaws.
There are others out there. Grab the index for the Archiver directory on
atari.archive and pick a few to try out. In general, you want one that can
be installed as an application (so you can just double click on the arc or
lzh file you want to process), and allows you to pick the destination.
I would insist on being able to generate a destination directory
automatically.

Hope this helps.

There is an old port of GNUchess. Also, there is a free/shareware graphical
chess game for the ST that achieved some fame when it was first released
(this was some time ago). My memory blurs, but I seem to remember that
this game used some original algorithms that were found to be better than
a professional proprietary chess computer (that cost many times as much
as an ST at the time, and could only play chess). I _think_ it was called
Krabat Chess.

Of course, there could be other PD chess players that I don't know about.
I have seen Chessmaster 2000 (or was it 3000?!?) for the ST, and it seemed
to be a good one (neat voice synthesis, good graphics/user interface). It
is commercial, but could probably be found quite cheap used or in a bargin
bin.

2735. Blitter

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 16:41:33 UTC
From: di3dah@curtis.adbutb.hks.se
Message-ID: <1994Feb10.164133.27583@gdunix.gd.chalmers.se>
Source record: 193238

Well, there has been some letters conserning the blitter...

The blitter can be used in 'non-HOG'-mode, and still have stabile
interupts and about 90% of blittingcapacity left. How?
Well, do like this (this is how the system is using the blitter):

```
[...] ; Install blitter data here...

lea $ffff8a3c.w,a0 ; adress to busyregister
moveq #7,d0 ; bit to busyflag
move.b #$80,(a0) ; Start blitter
restart:
bset.b d0,(a0) ; Here we restarts the blitter as soon as
; the CPU gets control
nop ; To be sure the blitter has started
bne.s restart

[...] ; When blitting is done, the CPU will
; continue here
```

Well, this is how it works. If you have a long interupt occuring when
the blitter may work, and you dont want it to disturb the CPU, do like this:

```
interupt:
move.b $ffff8a3c.w,blitterstatus ; Get current status of blitter
clr.b $ffff8a3c.w ; Stop blitterwork

[...] ; Do interuptwork

move.b blitterstatus(pc),$ffff8a3c.w ; Restart blitter
rte ; Return from interupt

blitterstatus:
dc.b 0 ; Old blitterstatus
```

Thats how you can do with the blitter.
When in sharemode first the blitter retrives 64 buscycles, then the CPU retrives 64, making
the blitting take twice as long. Bu using this techice you will have 90% of the
HOGblittingspeed (64/(64+7)), and still have quite stabile interupts...

By the way, there is a way for accessing the lost 2Mbytes !

YES, the blitter should have full access to this memory zone.
So you can use it for a RAMDISK or a cache disk, or even directly
with a MMU manager (a bit like virtual RAM, but with real RAM).

As soon as I get a memory upgrade, I will certainly code a cache
which takes benefit from this RAM.

2740. 1040 ST Video problem.

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 17:22:47 UTC
From: dba@sxb.bsf.alcatel.fr
Message-ID: <307@lacerta.sxb.bsf.alcatel.fr>
Source record: 193243

G'day folks,

a friend of mine has an 1040 ST with an intermittant video problem.

The machine runs perfectly but after some time, it may take
hours or even days, the display starts to blurr as the individual
pixels appear to jitter and scintillate.

Another display was tried but the problem remained hence it's definitely
coming from the cpu board.

I've opened up the cpu several times now and after each time, the machined
behaved itself for a longer than usual period before the problem reappeared.

All removeable integrated circuits have been extracted and reinserted,
including the RAM SIMS and the big PLCC chip in the socket near the video output.
I even sprayed around a bit of GOOP to try and improve any bad contacts......
but all to no avail. The problem always showed up again after a long delay.

I tried bending the cpu board to check that it wasn't a dry solder joint but
that had no effect.

Sometimes the machine will even run for weeks before it starts to play up!

If you can throw any light on this issue then I'd be really glad to here
from you. Perhaps it's a known problem with the big chip near the video
output that I mentioned. Is this the so called GLUE chip?

This is my first contact with the ATARI so I was working somewhat in the dark.
Thanks for any help you can offer....by email preferrably.

Cheers.......Dale

Is there any kind of interface spec for TOS?

To what extent does the API hide the hardware from
applications?

Bottom line, given the surplus price of low end Sun 3
hardware, is there any reason someone couldn't
write TOS to make a Sun emulate an ST? (Bwahahaha!)

'Alan Swanson' writes:

: I do know about the disk fixes and how to change the DESKTOP.INF file.
: It's the hassle of having to change it (DESKTOP.INF that is) or
: forgetting to use the STEFIX.PRG. It's really just general laziness.
: I received some mail from Rodger Sheppard saying that I could patch my
: own roms with Eproms, ie copy the the tos 1.62 to a new set of roms.

I've just remembered another fix for the problem, which I used to use before I got a Hard Drive and a Hi-res monitor. The PD program 'DC-Format 3.x' will install an executable bootsector on any floppies you have, so that when you boot with that floppy, various configurations can be set. One of these is the option for Meduim Resolution. I cannot guarantee this would work on your TOS version, but it certainly does on mine.

>What's the difference between the 68881 and the 68882 ?
>Why won't the 68882 function properly in the MSTE ?
>

From what I understand, the 68882 is pin/hardware compatible with the
68881. The main difference is that it is pipelined (which means it
can execute floating point operations faster given an appropiate
compiler -- i.e. the compiler would order the operations in such a way
as to maximize the benefits of the pipeline).

The main problem with using the 68882 in a MSTE is that a lot of the C
compilers out there had a bug in their floating point libraries which
caused problems with the 68882. This, in turn, meant that any
software written using these compilers would not work on a MSTE with a
68882.

The above is all from memory so I might be wrong. Any corrections
would be welcome.

What I've read from Steinberg's News sheet, only Fast SCSI2 will work together
with Cubase Audio. According to some music stores they told me that the
IDE-format won't work at all. I'm surprised that you wrote this, because I've
never ever heard it before. Allthough, it sounds interesting. Have you tested
it by yourself? And please, ask those people before I buy something -way to
expensive- and don't really need it :-)

Or the owner has a bunch of 68881-16MHz FPUs in stock and would like
to unload them on MSTE owners ;-)

BTW, I've seen 16MHz 68882 Mac Classic/LC upgrade kits advertised for
$59US. If the FPUs are socketed PLCC chips, then they could be used
in the MSTE. The only remaining problem is getting the PAL/GAL chip
such that the FPU can be utilized.

2759. WINCAP entry sought for CDC WREN drive

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 22:18:06 UTC
From: ttonino@bio.vu.nl
Message-ID: <1994Feb10.221806.1909@bio.vu.nl>
Source record: 193265

Hello dear net.folk,

I just acquired a used and not really healthy CDC WREN
hard disk drive. Currently I am not able to format it with the
Atari utility HDX 5. The drive is visible for the driver, which
reports it's name when booting. HDX however asks me to contact
Atari for a new WINCAP file.

Does anyone have such for me, or data on how to enter parameters?
I tried the other settings, e.g. MEGAFILE 150 and others, but
still with the not supported - contact Atari message as a result.

If anyone has 'the missing line' or a new WINCAP, or other solution,
many thanks.

The drive model number is 94181-702, and it has a 570-600 MB capacity.

Regards,

Thomas Tonino

2760. Re: Linux for TT/Falcon??

Newsgroup: comp.sys.atari.st
Date: 1994-02-10 22:20:41 UTC
From: karlm@highett.mel.dbce.csiro.au
Message-ID: <2jebvp$dg3@news.dmpe.CSIRO.AU>
Source record: 193266

Just on this thread about Linux for the TT/Falcon, here are a few questions ...

1. Is Linux a derivative of Unix? If so, then

2. You should be able to run it on a 68010 or 68020.

Now, I'm going to be shot down in flames for stating this, but a few of the guys here at work are considering buying a second-hand Unix box for playing around with. The boxes are AUS$600 (US$450), and they have 2 * 380 mb SCSI HDs, HEAPS of external ports, a Tower Case, Printer, Terminal, 150mb Tape drive and the Central CPU is a 68020 .... running Unix SR3 ....

So, am I just clutching at straws, or should Linux run on 680x0 machines where x > 0? ....

Anyway, $600 is a good deal for 2 380mb SCSI drives, even if they are 5.25 inch jobs ... they'll suit my Falcon real nice ...

Regards,

Karl.

Not really. Those extra TTs are just to feed the Jaguar developers,
since the only current Jag development platfor is a TT+extra goodies.

Has anyone heard of any of those TTs making it to dealers for sale as
"normal" TTs?

Wouldn't an ISA graphics card require a special ISA driver (thanks to
the stupid nature of the ISA bus... ie, you can't ask the card what IO,
IRQ, etc its set at) ?

> IDE is standard, SCSI is optional, the board for SCSI is currently not
> finished but should be in the next two months.

Yuck. Nothing like crippling a high-end system with the lowest-end disk
subsystem. :-(

> Further additions are a planned 060 board.

Why would they do this? _If_ the '060 is released, it promises to be
MUCH more expensive than PowerPC chips, which will offer much more
speed...

I printed this and the README.ST, and RTFM'd... works like a charm.

> Yes, you can use the attach command to debug any process after telling
> gdb which are the exec and symbol files. The only tricky part is to
> attach to the process before it crashes...

No problem... The program I'm debugging crashes at specific times, and
I can easily attach to it before then... I'm glad this works!

> Use the backtrace command (can be abbrevated to bt).

Works like a charm... one of my crashes is coming way down in the MiNT
library though (!), so I need to investigate a bit more...

> You can also use -O, but *not* -fomit-frame-pointer. Make sure that
> the symbol file is linked the same way as the exec file, e.g. by using

Thanks for the reminder; it also said this in the README.ST.

The gdb 3.6 from ftp.germany.eu.net works much better than the one on
atari.archive; the one on atari.archive gave me 11 bombs under MiNT
(which usually traps bombs!).

Whoa whoa! you only have 32kwords TOTAL, the X Y and P are mapped
onto it. that is: x:0 x:16k and p:16k are the same memory location.
as well as y:0 y:16k and p:0.

Tricky, you mean connecting DSP transmit to DMAREC?

Now I know why you're the demo coder. :) thats pretty sneaky.

Outside works fine with MiNT.

Of course, memory protection gets turned off (only one program can have the
MMU --- yet another reason to add virtual memory to the OS (MiNT)).

Yikes. That would be chaos. Sure, if you don't WANT to see game messages,
you'd love to have them all pushed away into one group. But for the people
that do, it would be useless. Besides, rec.games.video.atari covers Jag.

Fine - I was told that I had to risk one problem or the other as neither types of chip were 100%. As it happens I never had the sound problem, and changing the shifter cured the left boarder problem.

My 1.44 floppy was faulty as well - but thats another story!

While I'd also be interested in seeing Fast SCSI-2, I might point out that even the TT's SCSI-1 bus runs at 4 MB/sec async, which is still faster than most hard drives out there. I'm sure very few Atari owners own enough fast drives to saturate that bus...

Hm... No, there aren't many reasons why this couldn't be done. But still,
why would you want to? A much more interesting project, I'd think, would be
to port SunOS 3.5 to the ST...

The XBIOS has some stuff that might be considered hardware-specific, but their
use has either been discouraged or extended by Atari. (e.g., Xbios video,
rs232 config, etc...)

>Jonathan E. Quist jeq@lachman.com Lachman Technology, Incorporated

Hm, Lachman, eh. Any chance you can dig up the old X port and get it freed?
(As I recall, 'way back in 1988 some guys at Lachman ported an X10 server to
run on a 520ST. Also as I recall, it didn't use TOS at all, and whatever
kernel it did use was proprietary, and so the code never appeared in the Free
World... There's even a paper about it in an old Usenix Conference Proceedings,
but I don't remember the specific reference...)

: What version(s) of OXYD are you running. I tried it out with a MIDI
: link between a Falcon (v3.2) and a MegaST (v3) and it said link game
: not possible. My wife really liked it and if I could get a link game
: going then I would order the book.

Both Falcon and MegaST have to run in the same resolution. You've to
choose between ST-HIGH or ST-LOW. The TT-MID version will not work. It
also would be a good idea to run the same executable on both Falcon an
MegaST. As I see you use different versions on the different machines.

I sometimes link my Falcon to my 1040 STFM. I prefer ST-LOW (Colour
version).

Cameron Marshall (qu94003@black.ox.ac.uk) wrote:

: i just downloaded the latest version of Gemview (3.01) from the atari archive

The latest version of GEMView is 3.02.

: VDI_FIX.PRG presumably fixes my VDI, but what's wrong with it?

Older versions of VDI have the problem when opening three virtual
workstations an closing the second before closing the third the system
will crash. It's easy to reproduce this Bug with GEMView because it
seems to open a virtual workstation for each window.

: WINX.PRG something to do with having lots of GEM windows

If you have TOS 2.x or higher you should give WINX a try. You get a
lot of new window features (backdrop, realtime-slider, etc.) not only
40 instead of 7 windows maximum.

: WINNI.PRG ?

This is only a test-program for WINX producing many windows on your
screen. ;)

One of the other addidional programs allows GEMView to install as
SHSHOW with MultiTOS. GEMView will then only started once.

: Can I delete these and still get along OK?

You can, but it's not recommended.

Bye,
Knarf

Source record: 193293

> Dave, where your program could really come into its own is as a slideshow viewer

Yes, that's largely the point. Mine is intended as a serious tool for maintaining a large JPEG archive (I have ooh it must be 50 megs or more now) and so has a lot of features connected with viewing large numbers of images. In comparison, Brainstorm (or at least what I've seen, which might be out of date now) is run through GEM, which imposes a lot of contstraints on what you can do.

> automatically go on to the next picture after a specified time interval

2.18 has 'auto-slideshow' where it goes onto the next pic as soon as it is ready (this was mostly intended to make it possible to compact a large number of pics at once) and I'll have a look at including timed slideshow by the next version. Other things that will be in the next one include: improved GIF support (Interlaced GIFs and oversize clipping), mouse-driven display routines, and possibly mouse-selectable image cutdown if I can get the bast working.

Dave

Be VERY careful. Most fonts you find on ftp sites are only for screen
resolutions. You won't be able to print documents with these fonts.

For more info see at "The GDOS FAQ".

Message-ID: <1994Feb11.104407.27132@dmu.ac.uk>
Source record: 193296

Hello,

Ummmmm, where to start. I've has an STe for over four years now, during this time some mates of mine and I coded some demo screens etc. Anyway I now have a demo shell with only three screens, if ANYONE wants to send me a screen of ANY standard as long as it's code in 68000 then please contact me via E-mail. I've been too busy with University and writing and STe game to do any screens, but it would be a shame to waste all the hard work that has gone into this demo..... Especially as the three screens I have are guest screens!

Alan. (se1ap@dmu.ac.uk)

p.s - what there is of the demo (intro, 2 loaders, depacker and main menu) are quite nice!!!!

No, David FORRAY is absolutely right, YOU CAN NOT USE A 68882 IN PLACE
OF A 68881 FPU : I wanted to do it on my MegaST (with a 25Mhz crystal)
but I never succeeded, all th C programms crashed (well, to be right,
entered an infinite loop while reading the status register of the FPU).
Even at 8Mhz, it has never worked (I used a logic analyzer).

You can believe me, I switched back to a 8Mhz 68881 (which works well).

> BTW, I've seen 16MHz 68882 Mac Classic/LC upgrade kits advertised for

The FPU responds to the address $FFFA40 to $FFFA5F. If you know what signals
come on the socket of the PAL, I could try to compile one under ABEL.

EC> you have?

Since my hardware techie friend never gets the time to do anything, here's how
you SHOULD be able to use 8Mb RAM in the Falcon. (not tested)

Use 8 1Mb SIMMs .... and have logic decide when to use the lower 4 or the upper
4 ... (interleaved longwords?) ...

There are some benchmarks in a recent issue of ST Applications, but
AFAIR no file sizes.

The general opinion of the review was that it was great, but only if
you had something (anything!) better than an ST.

2796. panasonic flatbed scanner

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 12:02:00 UTC
From: L.J.Sak@kub.nl
Message-ID: <19940211130217.L.J.Sak@pc0523.kub.nl>
Source record: 193152

I am having some problems with my Panasonic 506 flatbed scanner,
due to interfacing. I have connected my scanner with the Heim-Verlag
interface, but that one caused many problems due to SCSI interferance
(for the interface is DMA connected to it).
I am now looking for new solutions for the interfacing.. Does anybody
know the 'Brock' interace? What sort of software do you use for your
flatbedscanners? Are there GDPS modules existing to for example integrate
it with Cranach or such works?
Thanks in advance,
Ludo,
L.J.Sak@kub.nl

2797. Taxan 21" monitor BNC

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 12:08:00 UTC
From: L.J.Sak@kub.nl
Message-ID: <19940211130815.L.J.Sak@pc0523.kub.nl>
Source record: 193153

Could somebody offer me some information about a 'problem' with a monitor
of a friend of mine?
It's a Taxan 980 21" color monitor, with BNC connectors provided on the
back of it. It is now connected to a computer (PC..) with a rs-343
connector (serial, wide).. It sounds clear to me that due to the BNC
connectors it is possible to connect it to a usual BNC-VGA video card,
but I don't know for sure.
Does anybody know something about this? (or has friends who do, for this is
an ATARI board)
Don't feel insulted due to this PC message, for I have had ATARI's for
almost 9 years now and I knew I could ask you!
Ludo,
L.J.Sak@kub.nl (do mail if you know the answe

In your country AtOnces have been made, which emulate 286 or 386. I don't
know if they are still manufactured (thought not), but they are still for
sale in Germany. Look around, they are not too expensive (DM 200 or less)
For some adresses, look them up in for example ST Computer (German maga-
zin

2801. FAQ: GDOS drivers 1.8 part 4

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 12:31:24 UTC
From: CASTAN@cip.physik.uni-stuttgart.de
Message-ID: <2jftqs$2329@info2.rus.uni-stuttgart.de>
Source record: 193157

[yes, I kow. part 3 is missing.]

10 Utiliies

10.1 fontfix

Problem: The font height is included incorrectly in some fonts. fontfix
discovers this error and corrects it.

On the Internet fontfix can be found here:

ftp.uni-muenster.de /pub/atari/Applications/Dtp/Fonts/Gdos

ftp.cs.tu-berlin.de /pub/atari/utils

10.2 Outline Fonts

Outline Fonts Accessory by CJG Copyright (c) 1992-1993 Atari Corporation

This utility edits the EXTEND.SYS for SpeedoGDOS. This file contains a
description of the volume from the Speedo-Caches, the fonts and the
font sizes. The Caches can be saved to disc an be loaded again, too.
A well done program, except that the offered cache sized are fitted to
FSF-GDOS, not Speedo

Filename: OUTLINE.PRG alias OUTLINE.ACC, 67644 Bytes

Included with SpeedoGDOS.

Why doesn't Atari make programs that include a display of the version?

10.3 Printer driver

GDOS Devices Accessory by CJGCopyright (c) 1992 - 1993 Atari Corporation

To edit the ASSIGN.SYS

Filename: DRIVERS.PRG alias DRIVERS.ACC, 64878 Bytes

Before starting this program it's better to create a backup of the
ASSIGN.SYS!
The two reasons are the following:

1. The informations about the Bitmapfonts are removed without comment.
2. ASSIGN.SYS is replaced by a new one if 'Benutzereigen'-'Hinzuf&#65533;gen' (in
the German release) is selected wihtout any chance to get it back.
(The English Version should have a Dialog like 'Own drivers' 'Add' or
similar). To all coders: Don't copy that style!

If this utility should sometimes display no drivers, simply start
ASSIGN.PRG (see 10.4 ASSIGN)

DRIVERS.PRG/ACC only displays the speedo drivers of my collection. Does
anybody know, how it does this? It doesn't even display the filename but a
name being included as string in the driver. How does one get it?

10.4 ASSIGN

ASSIGN 1.0a is by Dirk Sabiwalsky (PD).

It tests three things:

o Are there several fonts using the same ID and have different Names
(typefaces)?
o Are there several fonts using the same ID and the same pixel height?
o Are there several fonts with the same name (typeface) and different
IDs?

10.5 FONTCHK

FONTCHK tests GDOS fonts if they have possible errors.

It's included with ProList, for example.

10.6 FONTCNV

Converts GDOS-fonts from Motorola to Intel format.

Comes with ProList too.

10.7 GEMFont

Font editor able to read Signum and PK (TeX) Fonts too.

Internet: ftp.tu-clausthal.de:pub/atari/systools/gdos/gemfo120.lzh
Use the chance to get a new unlzh or lhxarc.

10.8 FontMonger

Converter and editor for different vector formats including Speedo. Only works on
IBMs or MAC though.

11 Distribution

11.1 Atari

The drivers with the name Atari are available from Atari. Send three disks,
Money for shipping and a friendly letter to them and you'll get them with
printer drivers and fonts.

This Package is available at Atari-shops too.

No docs but for this price ...
(That's the way in Germany - other countrys may differ!)

11.2 BELA

The fonts with the name BELA were available from BELA

There were two discs with packed Printer-drivers and fonts for them

The fonts DO have the same IDs as ones from Atari, but the internal
font NAME is different. Due to this these fonts are not correctly accepted
by some programs if used with Atari fonts.

There's almost no documentation. Not even a hint about who owns the copyright
for the drivers or about the author(s)

One last thing about BELA: R.I.P. ;-)

11.3 FontGDOS

The drivers from this package are really much faster than the former ones.
(Only bitmap fonts and graphics are comparable of course)

I didn't have any problem using these with other GDOS ersions but you must
limit use to the old Fonts.

FontGDOS is the successor to Atari GDOS. Mainly, it differs in the
Bezier functions, and had faster (and colorable) drivers. It has no
relation to FSMGDOS or SpeedoGDOS.

FontGDOS is available from several firms which use it for their programs.

11.4 Language

The driver named Language is spread on the language disc for the MegSTe

11.5 Internet

The drivers signed with "I" can be found on the Internet.
For example: ftp.cs.tu-berlin.de

11.6 Working Title

The WT drivers are spread with Calligrapher. They are (c) Working Title, the
wt-driver are licensed by Working Title.

No drivers are on the Calligrapher DEMO-disc. The drivers coming with
Calligrapher-lite (15DM) are signed with CL in the tables.

Screenfonts are on both discs.

11.7 Speedo-drivers

SpeedoGDOS is available for everyone now (in Germany 99.-DM)

Contents:

o Installation program
o Speedo font engine
o 2 Programs to edit ASSIGN.SYS and EXTEND.SYS
o 14 Fonts in Speedo-format by Bitstream
The Falcon-Speedo (in Germany) comes with 18Fonts now
o 14 Printer drivers

o An Installation-Manual

Outrageous features are:

o Speed
o Not the whole Font-file has to be read (Memory-saving)
o 16bit-Fonts (no 256 Character-limit)

See [4]

The information if it's a Speedo- or Bitmap-font can be found in byte 33 of the Fontname (vqt_name, INQUIRE FACE NAME AND INDEX, VDI 130). Zero means bitmap font and one means FSM or Speedo font.
this means the information to this in [14] is wrong.

Some Problems are inportant to be mentioned:

A coder can't find out if a driver can handle Speedo fonts (see last question in 10.3)

Some font-IDs are used by Bitmap- AND Speedo-fonts, though different fonts with similar IDs may never be installed the same time.

If you don't take care of this you'll get bombs.

Speedo depends on the user to install the right drivers and fonts. The coder cannot do anything to stop errors.

The best way is only to install Bitmap-fonts with the right drivers or to use a Speedo-only system.

The Monospace-font coming with Speedo has no 'umlaute'

Don't Trust [14] about saying that SpeedoGDOS is not updated.

For Installation and coding best is to refer to [5-7]
Remember to start NVDI before SpeedoGDOS in the AUTO-Folder!

The ones that bought Speedo got 4.0, the Falcon-buyers got 4.1

Now Version 4.2 (beta) is available with remarkable bugfixes. Speedo 4.2 is (in Germany) available as bundle or update (40.-DM) from R.O.M.
Only COMPO is selling it single.

Speedo 4.2 get's the Font-ID by adding 5000 to the internal one. NOW the problems with same IDs in bitmap- and vector-fonts are history.

11.8 COMPO

Compo offers a package of 40 Fontcuts in Bitstream Speedo-format (99.-DM, price may change): 4 Cuts of Bitstream Amerigo, 1 of Blippo, 1 Broadway, 1 Brush Script, 1 Caslon Openface, 1 Dom, 2 Kaufmann, 2 Ribbon, 14 of Swiss (Helvetica), 14 of Zurich (Univers)

11.9 IMG-0300

On the Internet:

ftp.uni-muenster.de /pub/atari/Gdos

11.10 Others

I am not choosing drivers to list here. I'll list them all! The authors and users of the programs should email me information about drivers they would like to see in the list. Please include code length, date, and known bugs.

11.11 FTP

Many students can get software worldwide via ftp (comment by s.d.: lucky boy'n girls ...). Prices for steady connections are constant, but connections between America and Europe have to be paid depending to the volume of data transferred.

Please try not to ftp over the Atlantic and use short ways.
Do your tranfers during off hours of the server (not 9am - 5pm).

Files with known names can be found by Archie.

In Germany:
login: archie
help

In the US e.g.:
archie.ans.net

The Archie-databases ask about once each month one ftp-server after the other for freely available files

12 Source

Being a developer it's possible to get an almost complete printer-driver in object-code. This one should only be fitted to a special printer.

This package is available for GDOS and SpeedoGDOS.

13 Tips'n tricks

13.1 Pixeltrash at printing, advice for users

Printing graphics on a NEC P6+ (maybe other printers too) including a lot of black in a line I often had the problem that one line was left out (Speedo-drivers NB15, NECP) or two lines were printed displaced in one line (Speedo-drivers FX80, NX1000).

This happens when printing directly and via CENSPEED. When using VARSPOOL this effect no longer occurs.

VARSPOOL can be found on the driver-disk of the NEC-printers.

13.2 NEC P6+

Once in a while a NEC P6+ will get noisy (rrrrrrrrrrraattatatattaa).
When you open the front you'll see a round stick (about 1cm thick).
Put two drops of sewing-machine-oil on it each year (you'll get it from
Mom)

2804. Spectre & 1.44 disks

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 12:51:36 UTC
From: troyc@bnr.ca
Message-ID: <1994Feb11.125136.4208@bnr.ca>
Source record: 193160

Why is it that when a thread gets good, the subject changes?

I have a MSTe, TOS 2.06.

I have Spectre 3.0 (legit) and it DOES NOT work with my High Density drive. Sometimes I can get disks to recognize, but more often than not, the disks come up saying they need "minor repairs". It was all I could do to get the Mac system onto my hard drive.

Please note that I have no problems with hard drive access, and once I can get files of the floppy, I am fine. I am not using HD disks with Spectre, I KNOW that would not work.

There are also no problems on the ST side with HD disks, except that every now and then they do not want to format, but I have had that problem with some DOS machines as well. ST Read/Writes are fine (except programs like Cheetah which directly access the FATs and assume disk size and all).

I tried using an external DS/DD drive and I got the same type problems with Spectre. Disks might sometimes work, and sometimes not.

Am I missing something? I was told by someone else that this would happen, but what I have read indicates that my disk drive should work with Spectre, but that HD disks would not work. I got the impression that regular DD disks would work in a HD drive with Spectre.

Thanks,
Troy Carpenter

As I understand it, some machines have a falty port and need to be returned to Atari. I am not sure if this is one such machine...anyone?

Also, remember that is you use powered inputs, ie froma stereo you need a line attenuator I think its called.

I have a screwed port on mine, but the company I brought mine from went bust so I have no fall back.

From my experience there is

32Kwords of X memory
32Kwords of Y memory
32Kwords of P memory

I am 100% sure about the X,Y memory , the figure for the P memory is the
minimum there may be more.

>as well as y:0 y:16k and p:0.

come again? how can it POSSIBLY be the same location, IT CANNOT! The whole
principle of the DSP 56001 is X,Y,P memory, IF IT IS HOW YOU SAY IT IS THEN
it makes L: addressing impossible. This is not the case!!!!
If the memory is mapped like you say , then how come I have an 8 channel
stereo Music Routine that uses the said memory spaces for different tables and
suchlike? perhaps it magically works all by itself!
Have u actually programmed it yourself or are you just going by what u have
heard?

:>>There are two methods of transfer, one is by using the Sound DMA which gives

|> Also how practical is it to use Normal RAM with the DSP?
|> Do you have to copy it from DSP RAM to Normal RAM?

The DSP has 32 kwords of (static) memory. I DSP word = 24 bits, so this
can be translated to 96 kbytes of memory.

You have to copy from DSP RAM to Normal RAM.
There are two channels for doing this.
Both capable of doing (at least) 1 Mb/sec, and they can run in parallell.

2810. Gemview & associated programs

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 13:55:00 UTC
From: cybercube.research@canrem.com
Message-ID: <60.44199.4514.0N194745@canrem.com>
Source record: 193166

Hi Cameron,

-> VDI_FIX.PRG presumably fixes my VDI, but what's wrong with it?
-> WINX.PRG something to do with having lots of GEM windows
-> WINNI.PRG ?
-> GEM_VIEW.ACC ?
-> GEM_XACC.ACC ?
-> GEMSHOW.PRG ?
->
-> Can I delete these and still get along OK?

VDI_FIX .... fixes some internal VDI problems occuring with older
GEM versions (sorry don't remember which anymore)
when opening VDI workstations. Most of the time
you won't need it, but installing it does not hurt
either. Simply stuff it in the \AUTO\ folder.
WINX .... gives you a lot more than just those 8 GEM windows
you are probably used to. Very neat on a Falcon
which may crash sometimes if you do some weird
windows stuff. *grin* If you won't need more than
eight windows at a time, do not install it in your
\AUTO\ folder.

WINNI .... testing prog for WINX

GEM_VIEW.ACC
GEM_XACC.ACC ..... can be used to invoke GEM-View as the desktop's
fileviewer. Dieter helped to define an extended
XACC2 protocol so that other apps can request
GEM-View to display some pics on the screen etc.
Not necessary or vital for the operation of GEM-View.

Hope this helps.

Ralf.

: Dsp uses 32k. We do not know of a way to copy normal RAm to the DSP.
: There are several programs now that access the DSP and the speed is
: significant. Try and obtain a demo called FRAC_DSP and you will notice
: the difference!

The DSP uses 32k words (96kb) not 32kbytes.
FRAC_DSP is _MUCH_ slower than it could be. It uses 56k floating point
libraries to calculate the mandelbrot set. This is only of comparable
speed to using a 68881. A sensibly written DSP fractal program would
use fixed point and probably generate the fractal faster than a Falcon
could plot the pixels! (Well, maybe an exageration.)

Why useless? It would neatly organise your daily newspaper into two streams.

Then we need someone who persistently tells everyone who posts to
comp.sys.atari.st about games to do that there. This group is about the
Atari system, not about wasting time on playing games.

My opinion is games don't have anything to do with the operating system;
they usually don't bother about the OS at all (although the effort people
like Warwick make to develop games which do take account of the OS
is appreciated).

I don't want your employee's dollar. Not even for my $0.02. The truth
in what I was saying is obvious. End-users pay the developers money
for their effort, so they don't need to do the programming themselves.
Among programmers, this is not an issue (and besides, this is only a
small community).

No, it means you can steal small routines from other programs. Once
you have spent 3 years on a major application, you're in a position
to say: I have paid my share.

I have a review copy of DataLite which I don't use. It is impossible to benchmark it because the speed depends on the size of the file vs. free disk space, algorithm used size of cache, etc. It is a very nice program in my opinion. I don't use it because I have a 500MB drive.

Date: 1994-02-11 16:31:13 UTC
From: timg@ccwf.cc.utexas.edu
Message-ID: <2jgbsh$29m@geraldo.cc.utexas.edu>
Source record: 193181

Hi,

Andreas Schrell (schrell@numerik.fernuni-hagen.de) was kind enough to compile an 030 version of Ghostscript 2.61. It hasn't been thoroughly tested, so it is currently only available from lifshitz.ph.utexas.edu in pub/atari/ghostscript/gs261ttb.zoo. If no one reports any problems after a week or two, it will be uploaded to mainstream archives.

Except for one small bug fix concerning cursor placement, this code is exactly the same as the 68000 version, so the only improvement you should expect is speed.

Please let me know if there are any problems.

-Tim Gallivan

From: nj1@ukc.ac.uk
Message-ID: <6854@merlin.ukc.ac.uk>
Source record: 193188

I have been going into town every day for a week now to get hold of 'Atari ST Review', but even though it was supposed to be out last thursday (the 3rd) it STILL isn't in!!!!!
I was told by somebody in WH Smiths that it is not due in until the 15th, but I was wondering if anybody else has found it??
Please can somebody shed some light on this - it is a *REALLY* long walk into town from campus! :-)

Also, is it possible to get onto GEnie from the internet???

Many thanks,

Rodders.

2833. 1040ST

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 17:06:43 UTC
From: wagner@cybernet.cse.fau.edu
Message-ID: <wPeLHc1w165w@cybernet.cse.fau.edu>
Source record: 193189

I was wondering what type of interface the Atari 1040ST used for floppy drives? Does it use the 34 pin IBM floppy drive interface (still don't know what they call that interface)? A friend of mine wants to replace his fried drive(s), one of them I believe is a 720K DS,DD drive. I would imagine it is the above mentioned interface, it is kind of hard to find custom built drives with custom built interfaces, I haven't seen one since the 8-bit machines. Some of the drives for the 8-bit were not even custom, like the 1581 for the Commodore, a 720K DS,DD drive using the 34-pin IBM style floppy interface with a board that had the CPU and ROM on-board to make it 'smart'. I still prefer a drive without an CPU and DOS that controlled the reading formats, writing formats, and so forth. But the DOS could always be modified, so it wasn't a big deal, stupid drives are cheaper, that's one advantage.

I haven't tried Krabat Chess but I can inform you that Warwick Allison who did the original ST port of GNU Chess is working on a much enhanced version of GNU Chess 2.0 and it should be fully GEM compatible. I very much look forward to try it!

> Of course, there could be other PD chess players that I don't know

There's also:
Colossus Chess X (fancy but not as strong player as...)
Psion Chess (old (ca 1986) but still very strong player)
Chess Champion 2175 (newer and also very strong player (ELO 2150+))

Did I miss anyone?

Looks like there's a loose connection on the microphone port. A little
solder should fix it. Although if you're worried, I'd take it to your
nearest Atari dealer.

lodge@ukfca1.sinet.slb.com (Mathew Lodge) writes:

[describing problems with a code relocaton and illustrating it with
the following]

```
: The example used was
:
: union u {
: long value;
: void (*func)(void);
: }
:
: If an object of type u is being used as a function pointer, it needs
: relocation. If it's being used as a long value, it doesn't. (Leaving aside
: the question of *why* you'd want to do this...)
:
```

The current version of regex from FSF keeps some information on "fail_stack".
All kind of things are pushed and poped there. Some pointers, register
numbers, identifiers. An original code does not even bother with casts,
not mentioning use of unions, as above, assuming that a pointer to
unsigned char is good for everything.

I do not advocate to write an obnoxious stuff like that, but this is
a life.

In Germany you can get these TTs from local Atari dealers (although my
dealer told me recently that it was more difficult to obtain a TT than
a Falcon; the latter is in stock).

2841. New Speedo groks more fonts

Newsgroup: comp.sys.atari.st
Date: 1994-02-11 18:50:12 UTC
From: schulz@tmipi3.telematik.informatik.uni-karlsruhe.de
Message-ID: <SCHULZ.94Feb11195013@tmipi3.telematik.informatik.uni-karlsruhe.de>
Source record: 193197

Anyone hunting for Speedo fonts may be interested in this (unless it's been mentioned before, in which case I apologise):

The German magazine "ST-Computer" writes in its February '94 issue (page 95, my translation):

There's little news from Sunnyvale apart from first messages of Jaguar's sale successes. At least one has finally come to the decision to release the latest SpeedoGDOS version which had been completed for several months. Greatest improvement: Speedo fonts with Postscript Character Encoding (rather common in the DOS-PC area) as well as Speedo fonts with Demo Encoding (this means the eight fonts delivered free with X11R5) can be used.

No further questions to my address, please; this is all there is, and personally I won't be using Speedo until I find a source of affordable fonts.

2842. WINX and LGselect dont get along...

Newsgroup: comp.sys.atari.st

Source record: 193198
Cross-posted to: comp.sys.atari.st,maus.sys.atari.software

I have a copy of WINX running on my new MegaSTE and like it alot.

I HATE the TOS fileselector, though, so I have tried LGSELECT.

It seems that WINX and LGSELECT aren't compatible... When I boot with
WINX and LGSELECT in my auto folder, I sometimes get the TOS
fileselector, sometimes the LGselector. I believe this has to do with
WINX's modifications of the GEM code before GEM starts...

Can anyone offer some help? Is there a way to get these two programs
to behave better?

LGSelect works fine if I install it from the desktop, by the way...

thanks!

But NOT on a "normal" ST/STE or Mega ST. The MFP of these machines does not
support more than 19.2k !! You _also_ need additional HARDWARE to get
more than 19.2k (e.g. the "38400-patch" with a 74LS74 or "RSVE").

BTW: The latest version is HSMODA02

I can tell you why I like them better than DOS/Windows machines--easily.
I put together an ST with 4 megs RAM/50 meg hard drive. It was FAST
(with Warp 9/TOS 1.4), I had lots of drive space, and I rarely ran of
memory, even when task-switching. Now I have a 486 (4 megs/130 meg) and
it runs PAINFULLY slowly and ALWAYS runs out of memory. I tell you,
if I didn't HAVE TO use some DOS and Windows applications, I would still
be on the ST. I will NEVER get over losing UIS III!!! It's just a
matter of the major applications (WordPerfect, LDW Power, dBMan)
freezing at early versions that drove me away--and I'm coming BACK!

As far as I know, objc_find() should *not* find objects that were hidden by
setting the HIDETREE flag in ob_flags. If you have encountered something
different, I would be _very_ curious to hear so -- but I can hardly imagine
that to be true...
So, to hide an object just do "tree[object].ob_flags |= HIDETREE". That should
do the trick imo.

Last June he announced TTs were back in production, yet I know of no
one who got a TT out of that (vaporware) run.

This is true. But I think there is more need for serious device drivers
(floppies, serial-SCC-ports, etc.). It's a pity I can't use Net & Term
to connect to my Sun because of a missing serial device driver for my
FALCON.

>
>Why not use named pipes?

i'd really like the programs to share memory. pexec mode 104 should do this
properly, but i get crashes (when i try it)... i guess i should: open a pipe,
pexec the other process, have it allocate its memory and pass the address
through the pipe....

has anyone done anything similar to this and is willing to share the code?

Well, I know of about half a dozen or so CAF users who are just using regular
SCSI drives. I haven't had a chance to ask yet, but I'll ask a few of them
what they have and whether they can get 8 tracks going simultaneously on it.
I'll let you know what they say.

>as well apply that to the screen.

If you were porting X to the TT, you would throw the VDI away, swap
to a new screen page, and use the MFB code they supply, which is heavily
optimised for the 68020 and a single-pixel screen.

X on a TT in colour would be _very_ hard - the interleaving scheme used
by atari is not one that the X-consortium considered, and so you would
need a (admittedly fairly minor) modification to the CFB code to to
translate between the atari scheme and something X understands.

Ok -- MFB - monochrome frame buffer, CFB - you can guess.
These are the two sample screen drivers that come with vanilla X, and
they have been tweaked again and again over the years.

MFB is why X _seems_ to run so fast on a sun 3/50.

> only 14 free.
> From this am I correct in saying that the original memory was actually 6
> megs, with 4 mb accessable, or is the missing 2 megs of memory used to keep
> track of the rest of the new memory?

What happened there is that Atari had to keep the new hardware compatable
with the old, so all of the old hardware address ranges (video, DMA, GLUE/MMU,
MFP, ACIA's, ROM (maybe) etc, etc) had to stay where they used to map to,
which unfortunately places it in a 2 meg area at the top of a 16 meg range.

Some of the more intelligent older software used "move $Fxxx.w" style in-
struction formats, which sign extend into a full 32 bit address, thereby
avoiding that two meg range on newer processors, but other software used a
direct 24 bit address to get at the peripherals, so that hole HAD to be left
open for compatabilities sake. It would be nice if the Falcon hardware
had mapped that higher to give an apparent 18 meg range ;-)

Sure, but you'd still have to deal with system 7, and you'd not get nearly the
sound capabilities of the Falcon... It would be "as fast" (maybe) but IMO the
falcon is a much better deal.

: > |> |> 4 STE and install the sucker? Where, how, how much? This isn't
```

Its in the bottom left. just pop a FPU in (16Mhz only I recall, least mine was), get a PAL from Atari (thoguh my dealer was told to goto Best Electronics as Atari dont deal with that anymore...) then remove the jumper between the PAL and FPU, and your all set...

BTW, to the right of the FPU socket there are three chips vertically arranged, teh middle one is the PAL if its a socket you need a PAL, if all three chips are present, you jsut need the FPU and remove the jumper.

Since I sold off my Mega/STe and getting a Flacon030, I have moved the FPU to my Falcon030, but the PAL is still around if anyone is interested in it??

BTW, I had a 68882 and it worked fine with GemBench. Only PRG I had that supported the FPU... Though Speedo locks the machine if you try to build witdh tables or configure your Printer, to be warned... (using the two ACCs actually, didnt matter if Speedo was installed or not...)

Actually, it's dead easy to start from zero. Here's what you do:

When you start off, sell both your missiles. You won't need them and it'll give you more cargo space) Buy as much Animal meat as you can, then take off for Barnard's Star. Sell it.

Now you're going to do a lot of trading. The two systems you're best off trading in to begin with are Barnard's Star and Sol. These are both Federation systems, so you will never get attacked in them. (which is why you sold your missiles)

Now, what you trade between the two is up to you, but what will make you the most money is trading Robots and Computer Parts from Barnard's Star to Sol, and Luxury Goods and Alcohol from Sol to Barnard's Star. Also, ALWAYS check the bulletin board to see if anyone wants somethingthat the market doesn't have but you do; they'll always pay twice market value. As you get more money, buy larger ships with more cargo space so you can trade in larger volumes and make more money.

THat's all there is to it. In a matter of two weeks, I've managed to accrue a nice Panther Clipper 2,000t ship with all the toys, 50 shield generators, 100MW beam lasers on both my turrets (tried small plasma accellerators; they're overrated unless you're going after some really nasty people, and weigh 500t!) and everything else. I COULD use a faster hyperdrive, but I can't find anything higher than a class 7, and my ship uses class 8!

It appears to be completely rumour. BobBrodie IS being hush-hush about the '040 model of the Falcon, but there is absolutely no Eagle060 as far as I (and apparently, Brodie) know.

Perhaps you're hearing a permutation of the Medusa T40 65mhz TT030 clone from Lexicor...

That's too bad. I'd have a few choice words with UPS if I were you. I'm sure they'd like to have words with the driver that took that check. When I did my internet purchases, UPS themselves told me that they would NOT, under ANY circumstances, take a personal check when the sender had chosen "CASH ONLY."

Either UPS was lying to me, or they have a driver that needs canned.

: figure that *something* must exist over there.

Future Publishing, publishers of ST Format, Amiga Format, etc are pretty
good publishers and their magazines are usually well put together.

If you can't find anyone in the US, ordering direct from the UK isn't
a bad experience. Just check out the mail order ads and find one that
advertises it outside of the EEC postage rates.
Make sure you don't get charged VAT, so take off 15% from most prices
advertised, as nearly everyone includes VAT (value added tax). VAT,
from memory, is not applicable to exports outside of Great Britain.

: UK/Euro users with suggestions, synpathy 8^), pity 8^) 8^), especially those
: who have experience with kid's software, please contact me.

Good luck. I've found most of the stuff I order from the UK arrives
in Australia in a timely manner via air-mail. I also get registration
cards, which the local distributors seem to like removing and destroying.

I don't know how the ST is doing in the US, but in Australia, Amiga and
ST software can be picked up from the bargain bins quite cheaply. I
think STOS or some basic for the ST should have lots of educational
titles. Amos for Amiga is quite popular and their are PD-buyware places
popping up in the UK.

: >STOS with no line numbers, and more structure in the programming.
: >This also never materialised.

I'm not suprised that the guys have dropped STOS. The Amiga port,
AMOS seems to have gotten the majority of the programmers attention.
They have also made AGA versions, support for the latest OS upgrades
and 68020+ support (well, it doesn't die like on a TT/Falcon).
Though, I've heard rumours they were making a PC version, so they
might end up dropping the Amiga support and moving on.

: Now, I don't suppose anybody remembers me saying "You should program
: with a real language like C, C++, Modula-2 or Pascal so that what
: you learn will be portable to new machines" the last time there was
: a language war here, but that's always been my position, and the
: deterioration of STOS is yet another example. Even Pascal and Modula-2
: are risky at the moment, but they do teach good programming practices.

Basics are good for just playing around. It's quick and dirty. There
are structured basics around, but it's not very good for learning good
programming practices.

: The time has also come for us to be VERY careful when considering
: writing in assembler. Write your VITAL components in assembler if you
: really must, but not the whole program. Assembler programming will
: soon be useless. Mark my words.

I think the only folks who can get jobs writing assembler will be
people working on games, or compilers (have to be very, very good to
get compiler work).

: Ever tried assembler on a RISC machine? Whether it's programming
: a RISC PowerPC, or trying to schedule instructions for a Pentium,
: you won't be able to compete with the compiler's abilities.

Years ago, using machines with small memory, knowing assembler was
necessary because most of the tools were in a very sorry state. Now
with lots of good tools, knowing everything about the processor
probably isn't necessary.

: I'm not trying to start a flame war: I'm sure there are people out
: there who think that all they will ever want BASIC can provide. I'm
: just saying be careful. I changed from Modula-2 to C++ a couple of
: years ago, because of foresight.

: Programming an uncommon computer is one thing. Doing it in an uncommon
: language is something totally different. I say these same things to
: people who insist on hacking 386 assembler.

Basic isn't doing too badly on the PC. Visual Basic for Windows is gaining in popularity as a front end program. Provided you learn Windoze's API, you should be able to get work and make some money.

If you use PC's, just download a few programs and if they come with vbrun?00.dll, it's written in Visual basic. Have a look at what can be done in basic.

If you don't like Windows, you'd better learn Unix inside and out.

But I'd have to agree with you on learning a popular language, like C or C++. There's a bit of a language war between C and C++, some saying C++ isn't as good as it was made out to be. But so long as you've got the basics down and can write well structured and commented code, you should be able to pick up any language in a week.

There are still quite a few jobs around for people maintaining programs written in Cobol, Fortran, etc, but most new projects and jobs are for C/C++ folks.

> (especially for non-MultiTOS apps). If GER2ENG does "nasty, nasty things on
> an ST" one should blame the programmer, not the programming

I'm on of the people that cries out against GFA-BASIC occasionally; I used to program in it all the time (actually wrote an accounts receivable program in it in grade 12).

These days, the ONLY programs I have any problems with (well, other than the ones I'm porting or writing... but that's another story :-) are ones written in GFA-BASIC. The uucico in Hermes UUCP causes me unending problems under MiNT, GER2ENG does brutal things to my computer (I usually have to reboot after using it; that is, if it doesn't reboot the machine for me).

The only thing I can work from is my personal experiences with GFA-BASIC (ie, breaking every time a new vesion of the OS comes out, or a new machine comes out) and with GFA-BASIC programs. From what I've seen, I'll continue to avoid GFA stuff unless I absolutely need it; and I'll do as much as I can to replace it with something written in C or Pascal or C++.

The MiNT 1.08 source code is on atari.archive.umich.edu
atari/Mint/mnt108s.zoo or something like that. There's also a 1.08-1.09
patch on there, which you should probably avoid if you don't know how to
use 'patch'.

MiNT 1.10 is going to be released in a week or less; you should probably
wait 'til then. I suspect a complete 1.10 source archive will be
dropped onto atari.archive.

If anybody is really interested in Linux of NetBSD for 680x0, they should poke around in the netBSD, Linux or comp.unix.amiga newsgroups and see what's working.

NetBSD on the Amiga is up and running, with the ability to run Sun binaries, static and dynamic shared libraries. Of course, getting commercial Sun software legally is probably going to hurt your wallet.

The big thing about getting NetBSD and Linux is binary compatibility between different 680x0 boxes. No need to spend hours recompiling, just grab the binary and play away.

Linux on the 80x86 boxes have the real possibility of killing all other commercial Unixes. It has tonnes of capable folks working on it. There are MS-DOS full-screen and windowed emulators around, work on Windows emulation and a full-featured linux X-Windows word-processor. All this stuff will be *FREE*. Unfortunately, this may kill the job market for a lot of programmers, as it might be hard to outdo them with a commercial package.

> The Falcon runs on an MC68030-16, not a 25, and this is the low-end model.

Actually it's the only model.

> VRAM (I assume you mean a processor cache) is 96k.

There is no VRAM on the Falcon; VRAM = Video RAM, dual-ported, fast RAM,
allowing video refresh to take place without hogging the processor bus.
Unfortunately, the Falcon's video/processor contention can reduce it's
performance to that of an ST, thanks to the lack of VRAM. :-(

> Future? Plenty. Multimedia to be sure, MIDI, as always, and plenty more.
> Not to mention that the Falcon is priced far lower than any Mac Quadra
> system.

Mac Quadra 605 (probably 68LC040-based, 25Mhz?) goes for < $1000 US
(probably 4M RAM and 120M disk, but I don't know). Isn't the Falcon
4/80 > $1000 US?

2882. POV-Ray 2.2 - executables

Newsgroup: comp.sys.atari.st
Date: 1994-02-12 15:32:24 UTC
From: cherborth@semprini.waterloo-rdp.on.ca
Message-ID: <H.eg.Y&fUbkz8ixk@semprini.waterloo-rdp.on.ca>
Source record: 193139

POV-Ray 2.2 was released yesterday.

Being the nice guy I am, I though I'd whip up some Atari binaries and drop 'em on atari.archive.umich.edu. I built 68000, 68000+FPU, 68030 and 68030+FPU binaries, which are on a.a.u.e now.

Since I'm using a cross-compiler on a (MUCH) faster UNIX machine, I didn't get a chance to test the binaries before I got home. (You can see this coming, can't you?)

Well, when I got home, I found that the 68k binaries I build don't work. They won't parse basicvue.pov anyway, and that's the simplest scene I've got (an orange sphere on a blue background). Since I've only got an ST, I couldn't test the other binaries if I wanted to... but I doubt they will work. Someone should still try though, and let me know!

This is, I guess, either a compiler bug (gcc 2.5.8) or a library bug (MiNTlibs pl.41). POV 2.2 worked fine on the UNIX box using the nasty Metaware High C compiler that we've got there.

Dang. I rebuilt pov 2.2 for the 68k without optimisation, but that didn't the problem either. If anyone gets a chance (especially anyone with a 68k/FPU, '030, or '030/FPU) to test it please do. *sigh*

I'll let you know if I can track down the problem.

Karl Meyland (karlm@highett.mel.dbce.csiro.au) wrote:
: Just on this thread about Linux for the TT/Falcon, here are a few questions ...
: 1. Is Linux a derivative of Unix? If so, then

Yes.

: 2. You should be able to run it on a 68010 or 68020.

Perhaps. The 68851 (or was it 68551?) is probably different to the
MMU in the 68030 and 68040. The 68040's MMU is a lot different from
the 68030's and caused quite a few headaches for the Amiga folks working
on NetBSD and Linux 680x0.

If you're a unix hacker, you might be able to rewrite the kernal and
make device drivers for Linux.

: Now, I'm going to be shot down in flames for stating this, but a few of the
: guys here at work are considering buying a second-hand Unix box for playing
: around with. The boxes are AUS$600 (US$450), and they have 2 * 380 mb SCSI
: HDs, HEAPS of external ports, a Tower Case, Printer, Terminal, 150mb Tape drive
: and the Central CPU is a 68020 .... running Unix SR3 ....

They seem like very good value ;-) I'm thinking about getting one just
to play around with.

BTW, the exchange rate on computer hardware is more like US$1 = Aus$2

: So, am I just clutching at straws, or should Linux run on 680x0 machines where
: x > 0? ....

I think you're going to be clutching at straws. SYS V r3 might cost
quite a bit to be registered in your name, then again, AT&T might not
care and let you use it for free.

GNU C is available for System V, release 3. Emacs, etc should compile
okay.

: Anyway, $600 is a good deal for 2 380mb SCSI drives, even if they are 5.25 inch
: jobs ... they'll suit my Falcon real nice ...

The hard-drives aren't the most reliable things around. I've had quite
a few private e-mails from people who work with the NCR towers and they've
had hard-drives die around the 4 year of continous use period. 8 out
of 18 hard-drives are dead at one site. NCR/AT&T aren't really
interested in selling new ones to you and charge close to $10K for
a new one.

If the memory chips are SIMMS, you might be able to rip them out and use it on your own system, or sell the thing for parts. I would be wary of selling the SCSI drive to somebody.

I don't know whether you can get drivers for the SCSI tape drivers The SCSI are full height beasties, so you'll probably need a full tower case to run them and keep them cool.

I'd suggest asking around in comp.sys.ncr or the comp.os.syvr3 newsgroup for more suggestions.

Well... Brainstorm's DECODER doesn't use GEM at all, it is an AUTO-program... ANY program can support the decoder and use it effectively, whether under GEM or TOS. The VIEWER that comes with the decoder is just a testing tool Brainstorm used when developing the decoder... For instance, GEM-View does support the decoder...Any other Slideshow program that cared could make use of Brainstorm's fast decoding!

: --Roger

I heard longtime back that when Simon Douglas was writing A-MAX, Mac emulator for Amiga, he got some help from Dave Small. A-Max I was quite primitive when it first launched several years ago. Dave had mentioned about how difficult it would be to write a Color Mac Emulator but he going to do it anyway.

Now Amiga has 2 COlor Mac Emulator:

EMPLANT which using Mac II ROM and Simon Douglas just released A-MAX IV which emulate color Mac using the 128K Mac Plus ROM. (I guess Simon probably put the missing code and 32bit Color Quickdraw in the startup program.

No, I am not an Amiga user so please don't flame me.

I own 3 Atari computers, a 520ST, Mega 4 and a TT. Atari TT. I also own MagicSac, Spectre 128 and 2 Spectre GCR.

However, I just bought an Amiga 600 last week for my son to play games because it was on cheap sale.

I hope that Dave would get his Color Spectre and Spectre 3.1 out soon as it is pain to use Spectre 3.0 with the TT.

Where are you Dave?

Suthipuntha.

: digital and RGB analog color output, as well as monochrome.
: If someonehas done this and had experience, could you (a) post the
: pinouts for the cable that would do the connection and (b) tell us if
: the monitor can be used either as color or monochrome without
: rebooting or complications? I have a monitor box which controls two
: monitors, but the 1084 would take all inputs through one cable and one
: pinhead assembly. How does the monitor detect the signal?

Just bought an Amiga 600 with 1084S (S for Stereo) for my son I should be able to check the pin out for you. Comparing it with SONY KX-14CP1 which I bought for my Atari since 1985 SONY has muich better clarity. 1084S (and I think your 1080 is similar except for non stereo sound) has 0.42 mm dot pitch comparing to Sony 0.38 mm. I am not sure about Atari SC1224 but I think it is 0.38 or 0.41 mm.

The RGB TTL mode is only suitable for IBM (CGA mode) but not compatible with Atari. You can only use it's RGB Analog mode with Atari. I don't think that you can use it in Atari Hi-Res (Mono) mode (I have the spec in front of me now and found that it's frequency is not high enough) but you can use the composite video input for the VCR so you can watch the TV program with it.

Only inconvenience is that you have to unplug the audio cable to plug in the audio output from the VCR. A single pole 2 trow switch can be installed to select the sound from VCR or Atari.

Now for the pin out:

My 1084S has detachable video cable with DB-9 at the monitor and DB-23 to plug in to Amiga. Pin out at the monitor (DB-9)is as follows:

Pin No.

1 & 2 Ground
3 Red
4 Green
5 Blue
6 NC
7 Composite Sync
8 & 9 NC

You just need to connect it to the corresponding pin on Atari. I also attached the pin out for Atari below just in case that you can not find your Atari manual:

DIN-13 (round plug)

Pin No.

1 Audio out (need to connect to RCA phono jack to plug to the audio in socket of the 1084 monitor)
2 Composite Sync

6 Green

7 Red

10 Blue

9 H Sync

11 MonoChrome

12 V Sync

13 Ground

I do not know what model is your Atari because some model (my Mega4 for instance has seperate V-Sync and H-Sync and does not have composite sync output) I my case I have to join H & V Sync together via 2 diodes to avoid reverse flow when I made cable for SONY KX-14CP1 which also only has composite sync. (75 to 150 Ohm resistors also OK but I prefer the diode)

Hope this is of some helps,

Suthipuntha, School of Architecture, National University of Singapore.

> my STe (+ one more from somewhere) to get a 4Meg machine on the cheap?

Your STE will not work with just 1 SIMM.

> Is the Ste memory fast enough? (I like the idea of going down the
> SIMM route as it aids later expansion to 14MB).

Depends what speed they are.

I'm using 70nS SIMMS without problems, but check with SS on SIMM
specification for FalconWing, check the current price on these and do your
sums again.

>3) Is there any advantage in getting an internal HD drive, given that
> I have pleny of space on SCSI externals?

Not that I am aware of, apart from convenience, no termination problems
etc. To use an existing ST SCSI drive you will need to disconnect the
host adaptor, and connect a new cable from the Falcon to the SCSI drive,
this cable may cost more than 30 pounds.

>4) By plugging a SCART cable into the ST-Monitor Adaptor (which works
> according to SysSol), what sort of TV resolutions can I expect? All of
> the RGB monitor resolutions.

You can get 13 pin Atari to scart cables, make sure it's wired for RGB if
that's what you want, (some are composite only), IIRC max. res. on a colour
"broadcast" monitor is 768 x 576 with overscan, min. res. is ST low.

>5) The CPU timing fix is done for free,

Not sure about this one.

> but they charge 60GPB for the
> bass-boost/line-level fixes. That sounds like a lot of cash to me,
> what's involved in the fixes?

The stereo input on my Falcon was designed for microphone levels, to connect
a line level signal, eg. from a CD player I attenuated the line signals with
200k series resistors. You could try this, then decide if bass boost is a
problem.

If I was buying a Falcon today, and I already had a SCSI drive with speedo and MTOS, then I would go for an unmodified 1MB Falcon with no internal hard disk, and upgrade with a SIMM adaptor.

Other items on my shopping list would include NVDI, SVGA monitor, screenblaster or hardup.

I think Compo do a very good package deal on NVDI and screenblaster at the moment.

>I've been reading different postings that
>says the Falcon DSP has 32K and 64K and 96K.
>
>Is there anyone who know the real value?

The DSP 56001 has the following on chip memory:

bootstrap ROM 32 x 24
program ram 512 x 24
X memory RAM 256 x 24
mu/A ROM 256 x 24
Y memory ram 256 x 24
sine ROM 256 x 24

The Falcon includes 96k bytes of SRAM for the DSP, this is configured
as 32k x 24 bit words.

>kill the job market for a lot of programmers, as it might be hard to
>outdo them with a commercial package.

I believe that the home market will probably look to Linux as the solution
to UNIX* like operating systems. I believe that companies will still prefer
to use commercial UNIX* like operating systems. The reason is support. If
a company basses its critical applications on Linux, it will have problems
when it needs quick support when the software fails. If the problem is
related to Linux, the company will likely have difficulty getting a fix for
the problem overnight or within the same week. Also no 24 hour support phone
lines exist. Whether the additional support really does help commercial
customers, the customers still want that service.

While I work in AIX development for IBM, I an pleased that Linux exists. Not
only does Linux make customers more familiar with UNIX* like operating systems
but it encourages the commercial vendors to strive for better features and
better quality in their products. Realize that this is my personal thoughts
and not speaking for anyone else but myself.

Also, even if Linux beats the commercial market, those programmers should
move with the tide to market applications, with good support and new features,
on Linux.

From: an65022@anon.penet.fi
Message-ID: <213303Z12021994@anon.penet.fi>
Source record: 193053

A couple of questions:

1] How do I display Russian text on the ST in an way that is
compatible with all ST computers ? How many different
characters does the Russian language have ?

2] How do I scroll text in a window in a way that is compatible
with Multitos ? Won't having more then 1 window open cause
problems ?

3] Is there source code in assembler for compresion/decompression
routine ? Something like LZW or Huffman. I have the unpacking
source for a couple of packers but not the compression.

Thanx for your time.

Source record: 193055

] Eh what? Did I miss something? As far as I know, only the STEFIX, which
] patched the medium resolution bug, came with my atari STe. What is the
] use of POOLFIX3?

At least you got *something* with your STE, I've had (a couple of times) the message 'Out of internal memory - Use FOLDRXXX.PRG to get more' and of course, FOLDRXXX.PRG isn't on the Language disk! All there is is that pointless ST-Basic! (Although, the STE version came with pretty good instructions as compared to the STFM 'version' I got a few years ago).

POOLFIX3 is apparently the other .01 of the 1.62 upgrade, it fixes some sort of problem with memory clearing (I think). I've never had to use it as I've got 1.62, lessee, maybe I've got it on a disk somewhere.....

(Looks....)

Yep, here's the info' part of the DOC's (Apologies to the author)...

There is a rare bug in Rainbow TOS (1.4) and STe TOS (1.6) involving the way GEMDOS handles its internal memory. You probably have never seen this bug, and if you use this patch program, you never will.

The bug doesn't bite very often. You probably haven't ever seen it. It happens when programs use Malloc a lot and you have a lot of folders in your system. (Yes, this bug was introduced as part of the code which got rid of the 40-folder limit.)

The OS pool is the internal memory used by GEMDOS to keep track of directories, files, handles, and internal memory. Sometimes, GEMDOS uses only part of a block. When there are two blocks that are only partly used, and the used parts would fit into one block, the space can be compacted to create one completely used block and one free block.

Unfortunately, there's a bug in the compaction routine. This patch prevents that compaction routine from being executed, by doing the compaction (with a bug-free routine) before GEMDOS has a chance to.

This code runs before every GEMDOS call. It uses a flag to tell whether it needs to run the compaction routine before it lets GEMDOS handle the call. If the call is one of the Pterm calls, or an Mfree() call, it sets the flag so the compaction will run before the NEXT Gemdos call:

new gemdos entry point:

```
if (flag is set)
run compact;

if (call is Mfree or one of the Pterm calls)
set the flag;
else
clear the flag;

jump to the original gemdos entry point;

The compaction routine runs through GEMDOS's internal memory using
unpublished variables (don't you dare use them yourself!) and compacts
empty space out of the memory blocks, so the routine inside GEMDOS
never finds any space to compact, and the incorrect code never runs.

-- End quote

There you go! :)

Is this memory compaction some sort of memory Defragmentation? If not,
is there a memory defragmenter program which would be useful with MTOS etc.
```

I have been paid with a personal check from the purchaser when I had shipped it UPS COD (Cash ONLY). I did not get burned, but I was prepared to demand compensation from UPS for breaking the contract I made with them. Remember, whey you pay them for the COD and mark it CASH ONLY (and you have copies of the reciepts to prove it!) and they don't honor that agreement, you should be able to demand they make up the difference (assuming the personal check you get is bad).

Of course, the above legal interpretation is completely without any legal basis. :) Don't quote me, it is just my opinion. :)

I have an Atari Falcon which I use mainly for MIDI purposes but I have been thinking about getting th HP DeskJet 550C printer. I would lie to use it for tape cassette covers..... Does anyone have experience using the combination of the Falcon and the 550C? If so what are you opinions of drivers for best color quality? Opinions about best paper choices for rich colors? How is the banding problem when printing solid color, say, no bigger than 3"X5"?

Second, does anyone have any info regarding a DSP modem for the Falcon?

Thank you in advance,

Michael

>
>1. Questionable, TOS 4.xx in 640*480*256 mode in overscan, with a nice
>256-color deskpic sure looks a lot nicer than any Mac-System I've seen.

Not only is this totally subjective, it's pretty much irrelevant, since
both the Atari and the Mac let you customise your desktop.

>2. TOS 2.xx and upwards offer about the same.

TOS 2.06 -- the latest TOS in the TOS 2.x series -- does not offer as many
features as System 7.1. File sharing, networking, multitasking, scalabale
fonts (although SpeedoGDOS does fix this), Quicktime, and the Communications
Toolbox. While MultiTOS and SpeedoGDOS include some of these features,
they still are not as advanced as System 7. Operating system design has
always been one of Atari's weak points -- their computers have always been
quite nice hardware-wise, but TOS has fallen behind.

>3. Big deal, so does everything else. Except ST TOS is a lot more
>efficient than the mac System as far as space consumption is concerned,
>faster too!

TOS is more efficient and takes less space because it does less. System
7 takes up about 8Mb of disk space an 2Mb of RAM. If I'm not mistaken,
this is close to what MultiTOS requires in order to run decently.
If you remove non-essentials, you can reduce System 7's requirements to
about 1Mb RAM and ~3-4Mb of disk space.

>Comparing with TOS 1.xx Mac OS v6.xx.xx would beat it. Anyone using
>System 7 on a machine under 40Mhz must be mad. Stick with 6.0.8 and
>Multi-Finder!

TOS 1.x pales in comparison even to System 6. Until recently, Atari didn't
even have multitasking except in a very limited sense. Thankfully, this
has been corrected with MultiTOS.
In order to run System 7 at a decent speed, at least a 68030 is required.

But definitely not 40MHz -- if you think so, then you cannot have used
System 7 before.

> characters does the Russian language have ?

Well, you could find a russian font. What do you mean by
"compatible"? I have That's Write on my MSTe, which came with a
Cyrillic font, but you'd have to buy it and it's tough to run without
a HD. I'm sure there's a GEM font out there, or you could make one,
to work in... I don't know exactly how you'd use it, though I'm
certain it'd be possible. There are 33 characters in the Cyrillic
alphabet, of which at least two can never be capitals. I guess you'd
have to eliminate some of the special characters in a normal font (you
wouldn't need an upside-down question mark or a y with two dots over
it anyway...

Later,
~Adam

Hello,

I would like to know about the canadian atari dealer in Manitoba, or one of the middle provinces. I saw them place an ad on the net about a month ago, and I lost the e-mail address that was included in the ad. I would like to know the e-mail address that was included so I can write to them. Duty can take a toll on ones bill!!!

Thanks,

Joseph Hogan

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

This is a common error. Those two characters can never appear as the
first letter of a word. They _can_ appear as capitals in words written in
ALL CAPS.

2909. Ghost Typing on TOS 2.06

Newsgroup: comp.sys.atari.st
Date: 1994-02-13 01:19:27 UTC
From: mlehmann@austin.ibm.com
Message-ID: <CL52CF.2zy2@austin.ibm.com>
Source record: 193065

My dealer has been fixing my 1040St for the last 9 months. Because it was taking longer than I expected (perhaps that is normal turn around time for Atari repair) he lent me a nice MegaST2 with a SST030 in it. I works quickly, but I have some problems. I get a ghost typing problem. Occasionally when I type a character I get two times the character. I am running at 33MHz with 3 wait states. I guest at that clock speed, the peripheral units have problems interfacing with the CPU over the bus.

Anyways, if this is a common problem with either TOS 2.06 or SST, please tell me what the fix it for it.

By the way, does anyone else in the world have a SST? I can't get MiNT .98 to work on it and I don't have a compiler outside of MiNT to compile new versions. What can I do to get later versions of MiNT to work on this machine? I was hoping (9 months ago) to make a NeXT or XDM like login (a graphical login) to set up the default MiNT desktop and environment for a user. But my machines failure made me unable to do this.

Any help is appreciated.

Get a copy of Universal Item Selector 3.x. It is cheap (no more than $20)
and much more powerful than Little Green File Selector. It is a must-have
utilitiy, IMHO.

With that said, I must admit that I have never tried WINX, so I don't know
if UIS3 works with it. Perhaps someone could confirm this?

>involving only a 68881. Thanks in advance.

No problem! I may not have this 100% as I am not a 100% 68k hardware hack. Basically, the 68000 communicates with the FPU through memory mapped I/O. Thus FPU registers are accessed using memory locations. I believe the PAL (or GAL, whatever it is) is needed to map these registers. Why Atari didn't include this in the Mega STE to begin with such that the 68881 was a drop in is completely beyond my comprehension (although it seems to be the the standard mode of operation for Atari).

I don't know if this chip can be purchased separately or just in the official Atari Mega STE FPU upgrade kit.

Hehehe. Sheesh... when I bought something COD from UPS the package was
clearly marked "cash only". Well, I only had a personal check. I looked
at the driver and said, "bummer, I'll have to get some cash". To which
he promply replied, "no, I'll take a personal check". Who was I to argue?
But then, I'm an honest guy... :-) Frankly, I was rather aghast at the
man, but I'd already had a major hassle on the equipment so I just wanted
to get it and be done with it.

Cash Only, to UPS, really means "At the Driver's Discretion." Let's hope
they're good judges of character.

Mark Lehmann (mlehmann@austin.ibm.com) wrote:

[...]

: I believe that the home market will probably look to Linux as the solution
: to UNIX* like operating systems. I believe that companies will still prefer
: to use commercial UNIX* like operating systems. The reason is support. If
: a company basses its critical applications on Linux, it will have problems
: when it needs quick support when the software fails. If the problem is
: related to Linux, the company will likely have difficulty getting a fix for
: the problem overnight or within the same week. Also no 24 hour support phone
: lines exist. Whether the additional support really does help commercial
: customers, the customers still want that service.

My friend works for a medium sized company, offices in various states
and had their software developers install a SCO unix-based system for
them. Bad news, those guys spent an addition 4 weeks playing around
trying to get the PC->Unix networking done. It was pretty obvious they
were out of their depth. I had a poke around it seems they couldn't
even run the install scripts from their boot disks properly. Did a
bit of fiddling and fixed something that was broken. No CS/EE degree,
just B.Ec.

I reckon I could have installed the network with almost zero knowledge
of networking. How? Just drop a few questions on internet, wait a
day and collect the answers. Hey-presto, overnight support. Or a
real-time talk internet-connect with somebody who does know.

Once Linux gets stable, I can envision hacker dudes out of college
selling their linux support abilities. There are people who sell and
offer support for Linux in Australia, 9am-5pm phone support (they are
students).

With a move to client-server and peer-to-peer networks, the market
for super-computer unixes is declining. The inability of the larger
workstation to super computer markets to make a unix standard to aid
the development and porting time of applications is making software
on those platforms very expensive. There used to be several orders
of magnitude of performance of between desktop and super-computers.
The price-performance gap is closing extrodinarily fast.

: While I work in AIX development for IBM, I an pleased that Linux exists. Not
: only does Linux make customers more familiar with UNIX* like operating systems
: but it encourages the commercial vendors to strive for better features and
: better quality in their products. Realize that this is my personal thoughts
: and not speaking for anyone else but myself.

: Also, even if Linux beats the commercial market, those programmers should
: move with the tide to market applications, with good support and new features,
: on Linux.

But Linux is killing the "you pay for what you get" philosophy. Really
good free software is going to deter people from paying for software.
The only way to get ahead is to try and patent ideas, make proprietary
formats, etc. I can envision people owning computers and not buying
a single piece of software, as anything they need will legally
obtainable for nothing.

I could gather up a team of good Linux hackers and sell solutions to
the same folks who end up running SCO-unix. Might have some trouble
getting professional applications to run on Unix, as I think a lot
of software commercial developers will probably gag at supporting
Linux. The motif for Linux shennigans spring to mind, indicating that
some people are getting worried.

Have you tried changing the keyboard response on the control panel?

IIRC, you have to drag the top slider to the right to slow down,
the lower slider controls the repeat rate, then save your preferred setting.

Hello,

a friend of mine is working as a sales representative. He has to travel around
by car, visiting customers. Now he is looking for some kind of software for
his Atari ST (1 MB RAM) that could help him organizing his journeys. The
software should do something like
- store addresses, names, phone-numbers, remarks
- store date of visits
- store some kind of attributes like
- average time a visit will last for a specific contact
- whether customer is sensitive of being in time or not
...
- after all it should be possible to extract the customers of a certain area
in a reasonable order (e.g. don't visit a customer that tends to exceed
the time schedule and then visit a second one afterwards who hates people
not arriving in time).

If you know of such a beast, either commercial or PD, send me a mail. As I told
you above, it's for a friend, I don't read this group regularly. In case that
you are interested in the same thing you may send me a note as well. I'll
forward the answers then.

Regards
Christoph Gartmann

2927. RSC on TeddyTERM?

Newsgroup: comp.sys.atari.st
Date: 1994-02-13 16:23:48 UTC
From: cfuhrman@csugrad.cs.vt.edu
Message-ID: <2jlk6k$bfl@csugrad.cs.vt.edu>
Source record: 193084

I just downloaded TeddyTERM 2.10 from an ftp site. It
decompressed okay, but when I load it up it tells me that it can't find a
.RSC file. When I check the zipped file, I find that that is not
included. Can anyone tell me where I could find said file? If it's modem
specific (I'm new at modem-ing) I've a US Robotics Sportster 14.4Kbd
straight (no FAX) modem. Thanks!

Source record: 193085

Hi,

I let my subscription run out on Current Notes & ST Informer and I want to resubscribe to these publications.

Can someone send me the complete subscription information for these magazines (what subscriptions they offer), address to send money, phone number to call, etc.? Thanks!

I would also like to know if there are any other publications in the United States besides Atari Classics for Atari users?

I can't speak for other parts of the world, but in North America:

1) you can't find them anywhere
2) the price/performance ratio is really bad
3) you can't find software anywhere; anyone without ftp access would
be in a real bad situation...

Another big factor is that *most* people buying computers in North
America have _no_idea_ at all about computers. They don't really know
how to use one, they don't really know what they want to do with one.
They just know that "everyone", including their office, has a DOS
machine. So, they go out, and buy a DOS machine, and never upgrade the
hardware (unless they replace the whole thing), never upgrade the OS to
something more useful (like OS/2... still almost 100% DOS compatible,
but not selling as well as it could because "it's not DOS", even though
it's a hell of a lot better).

I'm sorry to say that it's not a SCSI. Right now it's in my PC486/50 connected to a SB 16 ASP. Does any non-SCSI CD-ROM drivers work. The very same goes for tapestreamer that normally are connected to a PC floppy controller (AT-bus).

>A sadist??? (sorry! Couldnt resist!)

Actually, I can think of one non-masochistic use for them. Someone with a Gemulator card that came with TOS 2.06 installed could add the 1.0 chips for compatability with some old software. You'd have to be careful with your hard disk partition sizes, but it should work.

Or, someone very short on funds could buy a Gemulator without TOS 2.06 and just use TOS 1.0, though I think this would qualify for the "masochist" label.

2937. Atari: Everything must go!

Newsgroup: comp.sys.atari.st
Date: 1994-02-13 21:02:08 UTC
From: rjung@netcom.com
Message-ID: <rjungCL6L3K.LKE@netcom.com>
Source record: 193094
Cross-posted to: comp.sys.atari.st,netcom.software.atari.st,misc.forsale.computers.other

Okay, folks. I've got all sorts of Atari ST/STe/STfm/TT/Falcon stuff that I
can't use any more, so it's going on the selling block. Everything must go,
so make me a deal. Some of the items below may have prices listed -- I'd
like to get that, at a minimum, but again, everything is negotiable.

All software includes documentation. Send queries to rjung@netcom.com

Hardware:
========
SLM 605
- 300 dpi laser pringer
- Includes all cables, SLM interface, With extra toner cartridge
- Interface has been modified to accept power directly (the SLM can be off but DMA devices
will still work)
- 3,000 pages printed all together
- Asking price: $650 or best offer

Este cartridge clock
- Battery-powered clock, plugs into cartridge port
- Includes software

SOFTWARE: (includes all documentation)
=========
Calligrapher Gold/Calligrapher 3
- WYSIWYG word processor
- Includes all supplimentary disks and expansion packs (thesarus, grammar checker, label
printer, barcode producer, indexer, text effects, etc.)
- Asking price: $100 or best offer

Calligrapher font disks
- Typefaces for use with Calligrapher
- Century Old Style, Goudy, News Gothic, Commercial Script, Windsor, Britannica Light
- Asking price: $5 each

APPLICATIONS/UTILITIES:
MultiDesk Deluxe
HyperPaint
STalker 3.0
STeno 2.0
Warp 9 (screen accelerator)
SpeedoGDOS
Art Director/Film Director
G+Plus
Hyperfont
Laser C/Laser DB (C compiler, Debugger)

GAMES:
Castles
Dungeon Master
Chaos Strikes Back (requires Dungeon Master)
Gauntlet II
Leatherneck/Major Motion/Tanglewood/Time Bandits (4-in-1 package)
Night Shift
Oids
Populous
Populous II
Roadwar 2000
Starglider
Starglider II
Battlechess
Breach
Fiendish Freddy's Big Top O' Fun
Heroes of the Lance
Omega
Sim City
Trinity
The Zork Trilogy (Zork I, Zork II, Zork III on one disk)

Thanks for listening,

--R.J.

The answer is "no", though there is a MiNT port for the Mac that will
run TOS programs (no graphics, to my understanding, only pure text TOS
and TTP programs). This would probably not be of use to you.

On the other hand, why not purchase another ST? I have seen some real steals
on the used market recently. If you want it primarily for games, try to
find an STFM model with a mono monitor (you can then use your TV for color
games). Just a thought . . .

Message-ID: <CL6qty.292@cix.compulink.co.uk>
Source record: 193098

>VDI_FIX.PRGpresumably fixes my VDI, but what's wrong with it?

Probably... [g]

>WINX.PRGsomething to do with having lots of GEM windows

Install this as soon as possible... you'll also need either ROMSPEED (advised) or GEMRAM (same thing but takes more memory)... just put either of these in your auto folder, *followed* by WINX and you'll be in business.

WiNX gives you 40 windows in normal applications and 8 on the desktop - in addition, it lets you do a number of things like using any window gadget that's in a *background* window, moving background windows, sending foreground windows to the background (dependent on 'proper' programming), 'solid' moving and resizing of windows (it's redrawn as you go) and loads of other stuff. It also fixes a number of bugs. Note that some of these things are dependent on having TOS2.06 or greater.

>WINNI.PRG?

Lets you check out WINX by opening windows 'til it can't open any more, etc

>GEM_VIEW.ACC?
>GEM_XACC.ACC?

These two use different 'inter-application' communication protocols to give GEMVIEW commands, like, for instance 'show this picture, guv'.

>GEMSHOW.PRG?

Unsure without reading the docs.

>Can I delete these and still get along OK?

Of a certainty - although your life will be impoverished if you don't use WINX. (and Let 'Em Fly, which you can find elsewhere).

BTW - I'm the UK registrar of GEMVIEW, so if you like it... do the decent thing [g].

GEMVIEW NEWS

v3.02 is now about, it can work as a desktop accessory again and also comes with new modules to load and save both INshape pictures and STraight Fax files, and also to load 'Arrow24' files.

>imposes a lot of contstraints on what you can do.

As Brainstorm make you pay for info on their decoder it's difficult to say
exactly how it works - but I *guess* that you send various commands to the
DSP and it sends the raw picture data back. (i'd also guess that the file
handling and probably the sending of the data to the DSP is up to the
'host' program). But I don't think it'd be confined to GEM, just a case of
'here's the raw data, stuff it where you like'.

>2.18 has 'auto-slideshow' where it goes onto the next pic as soon as it is ready (this
>was mostly intended to make it possible to compact a large number of pics at once) and

It does, I like, I'll send the cheque this week...

>the bast working.

Nice... oh, BTW, are you going to do anything on the 'single screen'
problem? ie, if you have more picture files than are shown on a single
screen then you can't see the other ones. Or maybe I'm missing something?

Additionally, the 'half size big picture' thing doesn't seem to work
either.

>Can anyone offer some help? Is there a way to get these two programs
>to behave better?

I never found a way... so I dumped LGS in favour of Selectric... it's
much better. And don't listen to those who say that it doesn't show
enough files... the special features it has more than make up for this.

2952. Re: People Selling STs

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 00:20:17 UTC
From: cummins@osuunx.ucc.okstate.edu
Message-ID: <1994Feb14.002017.6623@osuunx.ucc.okstate.edu>
Source record: 193009

A HD w tos 1.0 only has 1 problem that cant be fixed by 3 small patches in the auto folder. After tos 1.4, the "limit" became 32Mb. And a different patch program is required. Two results of the unpatchable feature are:

1 Boot partition must be 16 meg or smaller
2 Any partitions greater than 16 meg are BGM (large cluster) partitions

I found this easy to live with. If you havn't used a HD... you really shouldn't. You couldn't bear to be without one once youve tried it.
The patches are:

PINHEAD (makes program loading faster by not forcing the ST to clear ALL your free memory before loading a program. If you have only 1/2 MB of memory, this is not a big deal, but with a meg or more....)

FATSPEED (speeds up the search for freespace on a HD. If you have only 1 or 2 megs of files on your HD, you won't notice this much. But once you have 10 or so MB of stuff in a single partition... This program helps reduce the time to open and write a file by... 5 seconds?)

FOLDERxxx (fixes a bug that causes APPARENT data loss after looking into about 40 directories after booting an ST. If "xxx" in the file name is larger than the total number of directories on your drive you'll never notice the bug. ICD's booter and some other programs seem to offer equivalent fixes. I used IDC's fix when it became available)

Once again... these are for tos 1.0 and 1.2 users. Things changed after 1.4!

I'm sorry to post this to all the newsgroups, but just to prevent more followups...

from the posting guidelines written by (?) of purdue university:

Announcement of professional products or services on Usenet is allowed; however, since someone else is paying the phone bills for this, it is important that it be of overall benefit to Usenet. Post to the appropriate newsgroup -- comp.newprod -- never to a general purpose newsgroup such as "misc.misc". Clearly mark your article as a product announcement in the subject. Never repeat these -- one article per product at the most; preferably group everything into one article. Advertising hype is especially frowned upon -- stick to technical facts. Obnoxious or inappropriate announcements or articles violating this policy will generally be rejected. This policy is, of course, subject to change if it becomes a problem.

See the part below "Usenet is not an advertising medium" in the what-is-usenet FAQ (available at rtfm.mit.edu, in the directory news.announce.newusers) for the original...

>advertised (as usual, I'm probably looking in all the wrong places)

I've been getting them formatted for over a year (1.5 if I remember
correctly) and they've always come formatted. Maybe you got them a LONG
time ago (before that). Nowadays, 3.5" floppy disk media comes
unformatted for the most part, but I haven't seen unformatted Floptical
media.

>backup support: dbII supports flopticals only by pretending they are a HD.
>there is *no* multi volume backup support. from what I hear, this will
>be corrected in DBIII.

I'm not sure I quite follow you on multi-volume backup support. Do you
mean multi-partition? If that's what you mean, then it's possible (I've
done it): backing up C,D,E, etc. to a Floptical drive. If that's not
what you mean, let me know if you feel like it.

Source record: 193014

For the internal drives a 720k IBM drive works.
Tos 1.4 is easiest to work with, as tos 1.0 and 1.2 require
a "flash" on the write protect line whan swapping disks to notify the OS of a
disk swap. Kind of frustrating if you don't fix it quick. My Toshiba drive
gated the WP line with a "disk in drive" signal, so the status did not change
when a disk was removed. I GLUED the disk in drive switch down and all was
well.

Atari ST Stuff for Sale
Brian Totty
totty@cs.uiuc.edu

I posted an incorrect version of this list last week. I cancelled it, but several people replied before it was killed. Sorry for the confusion!

I still have the following ST software for sale. Most of the programs still have original documentation and packaging. Many of these programs are excellent! I need to get rid of this stuff, because I am moving in a few months! All must go! Please help me find good homes for all this stuff!

I think the prices are very fair. Similar programs have been advertised recently for four times as much. But if you think the prices are too high, make an offer. Buyer pays shipping. $10 minimum order, otherwise I make too many trips to the post office!

If you are interested, email to 'totty@cs.uiuc.edu'. If you aren't familiar with the software, I'll be happy to describe it.

2960. Atari ST for sale

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 02:27:16 UTC
From: James_A_Landay@cs.cmu.edu
Message-ID: <CL7088.Fs2.1@cs.cmu.edu>
Source record: 193017
Cross-posted to: cmu.misc.market.computers,comp.sys.atari.st

Atari ST Computer for Sale:

- 520 ST upgraded to 1 MB RAM
- Panasonic KX-P1091 printer with stand
- can run color software when hooked to TV set (otherwise you need
a monitor)
- mouse
- two high quality joysticks
- lots of software and books

Specs:

- Motorola MC68000 processor @ 8MHz. Fast as a Mac Classic or SE, or a '286 PC
- 1 Meg RAM, 192K ROM
- 1 360K 3.5" floppy drive
- Sound included

Software:
- Omnires (allows you to run color software on monochrome monitor)
- Phasar (home finance)
- Tempus (text editor)
- OSS Pascal compiler
- CircuitMaker (digital logic editor/simulator)
- Flash (terminal program)
- Shadow (background file transfer)
- Harrier Strike Mission
- Pro Football Wizard
- Silent Service
- Star Glider (GREAT game!)
- Hippo Computer Almanac
- ST Basic computer language
- ST Logo computer language
- lots of good public domain software

Books:
- ST Manuals
- Atari ST GEM Programmer's Reference (Abacus)
- Atari ST Machine Language (Abacus)
- Programmer's Guide to GEM (Sybex)

$250 or best offer. I'd like to sell it all as a package, but I
may bend in extreme cases.

the Inforworld article was not to be serious. At least how I read it.
Atari is selling Jaguars quite well, and within the next few months
the numbers should be increasing. Atari rectified the RF converter
problem and made some friends in the process. I spoke to someone (I cannot
mention them) but they are a chain in the NE USA, and at first they were
saying 'oh here it comes again.. Atari screwing it up again..' but when
the rapid cure for the fault was started they were very happy with the
way Atari handled it.

Both machines need to be running in the same resolution. This means
you'll have to run the ST version on your Falcon when playing 2 players.

This is what I do between ST and TT.

This is not accurate. The need for the patch is not related to the total number of folders on your HD, but to the total number of folders opened in one session and also to the number of malloc() calls in that session.

2968. Falcon030 (TOS 4.04) and Storm

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 06:07:34 UTC
From: molin@cxc1.cl.msu.edu
Message-ID: <2jn4f6$n2k@cxc1.cl.msu.edu>
Source record: 193025

I've been tinkering with an F030 and had a couple of questions about
various system patches when running Storm:

1) Does the Falcon require a serial fix program (such as SERFIX20.PRG)?
It was my understanding the Alan Page had indicated that such a fix
was _required_ or Storm wouldn't work. (I've been having trouble with
ZModem transfers when using Storm...)

2) Does TOS 4.04 not require FPATCH2 and/or BCONMAP? I found that I
could not get any INCOMING text to display on the screen when these
were installed, yet OUTGOING keystrokes were received by the host
machine. Is one or both of these the culprit?

From: molin@cxc1.cl.msu.edu
Message-ID: <2jn4l3$n3j@cxc1.cl.msu.edu>
Source record: 193026

Does anybody have any hints about making PageStream v2.2 work in color
on an F030? Every time I run the program, it sets ALL the color reg-
isters to black. Setting the X-Control Panel via the Color CPX does
changes things (temporarily) but I've had no luck on either TOS 4.02
or 4.04 machines.

It was none other than "Ofir Gal" that wrote on the 8 Feb 94 that ,
>> UK, Mags are full of all type of Rubish, like the STE was a Amiga
>> killer..
>> There is No demand for Atari Computer products at all...
> Atari specific retailers of hardware and software in the UK are
doing
> very well these days, although they can't quite work out why
they
> are...
Could it be the marvelous effort they are putting into supporting the
line.
The Atari Show's in the UK have been a great success and long may
they
continue !

> Roger, I was hoping you'll be able to tell the difference between
ST
> Review and ST Format. The news in ST Review are normally correct
and
> are NEVER invented. I believe this item was actually supplied by
Atari
> UK.
Whilst I agree with your distinction between the two magazines It should
be
said that ST Format have exactly the same story running this month .That
is
order's/demand for STE's outwaying the supply quite considerably. Similarly
that Falcon Sales have taken a bit of an upward turn on the back of Cub-audio
complete packages from Music Tech
retailer's.

No, the soldered on RAM is only 16-bit ST RAM. FastRAM (32-bit access)
is via a daughterboard which several companies make (inc. Atari).
Daughterboards may (or may not) use SIMMs, at their discretion.

Hey, don't knock it! At least the TT *is* expandable!!

The master ftp copy is at
ftp.e-technik.tu-muenchen.de:pub/comp/platforms/atari/incoming
(or some other subdirectory)

I've had no problems with reading different metafiles. Its big
attraction is that it uses Speedo properly! You can convert a string
of text to bezier curves, adjust the tracking/kerning, etc etc

It is great! Register it today!

They do work together. However, UIS doesn't work with MultiTOS. Try
Selectric 1.10 (or newer) - it does, is great, etc. It will also have
support for MinixFS in the future, which makes it perfect IMHO.

Well, you'll need a SCSI CD-ROM drive, so it looks like the Panasonic one is
out! CD-ROM is ONLY supported (so far) on the ST/STE via the ACSI port (using
an ACSI->SCSI host adaptor) and on the TT/Falcon via the SCSI port.

I believe you need to run PageStream v2.2b in 256 colors in order for the
color palette within PGS to work correctly. I don't remember exactly.

|> anyways).
Atari Uk will send you your free software after you've bought an HD model. I got
mine a while back from them. You only getthe software if you buy a HD machine
though. If you buy a HD-less one, add about 70 quid for MTOS & Speedo froma 3rd
party. I already had about 400Mb of external SCSI HDs but still bought an HD
Falcon. Normally, I just boot the Falcon as all my apps & prog tools are on the
internal HD. Nice & convenient. I boot with the external HD when I need to use
backups, GIFs and rarely used stuff like Ghostscript.

Hello folks,
Avery simple question (well I hope so...) :

What do I ned to have a stable working Gnu C compiler (and assembler
+ debugger) ?
My hardware: MEGA ST4, TOS 2.06 French, 85Meg harddisk, AHDI 5.00,
monochrome monitor.

Many thanks.

PS: this include a godd shell like TCSH.

>color quality? Opinions about best paper choices for rich colors? How is the
>banding problem when printing solid color, say, no bigger than 3"X5"?
Well, my experience is ST + 550c, rather than Falcon + 550c, but the
following should still apply:

DRIVERS:
. The PageStream driver for the 550c driver is not very good (in line with
the rest of PageStream!). You get a 500c driver with v2.2, but need
2.2b for the 550c. (Of course, a 500c driver can run the 500c, but
doesn't use the black cartridge, giving a big loss in output quality).
. GhostScript v2.6.1 has an *excellent* 500c driver. From PageStream, I
do quick prints direct to the printer, or better quality prints by
using the PostScript driver and GhostScript. The main difference
between the PageStream and GhostScript drivers is in the dithering
techniques; the latter gives MUCH better output in every printout that
I have compared.
. IMGCOPY2 has an OK driver, somewhere between GhostScript and PageStream
for quality.
. GDOS drivers for the 500 work fine, but in mono of course.

PAPER:
. I do normal printouts on 100gsm photocopier paper, and it works well.
Some absorbent papers give problems with colours soaking and spreading
before they dry (unlike the HP 1200c, the 550 does not have a heater to
dry the ink). Large areas of ink can cause this paper to crinkle a little
as it dries.
. Colour output on special HP glossy paper is absolutely stunning! But,
the paper costs a pound a sheet, so don't use it all the time!
. Given half-decent paper, there is practically no banding in the output.

Possibly st only, not sure about the Falcon:
Get a printer output patch program (FPRNT, if I remember correctly). It's
only a couple of hundred bytes long, and *greatly* speeds up printing.

Conclusion: It's a good buy! Some people would recommdend that you
also look at the Canon BJC600.

:> something different, but WHAT? Does it use some interleaved format? The
:> Crazy Dots vdi reports that there is a lookup table in this mode. Is
:> there some way to find out from the vdi what format is used?

The Crazy Dots does NOT have a CLUT in HiColor, but as the VDI cannot handle
more than 256 colors, it emulates one.
For the RGB informationn, there are two possibilities: MSB first or LSB
first. Check the Gemview docs for that.

Well - yes & no. You can run it in 16 colour mode no problem, but you will
need use the colour configuration option (in the far right hand pull-down menu)
to set up the screen representations of the colour's you are using. This can then
be saved, and will come up properly next time. Don't bother with fiddling with
the colour CPX - this isn't where your problem is.

>use 'patch'.

The patch file in particular is "diff1819.zoo." Actually, if you can
manage to compile 1.08 successfully, patching the source to 1.09
is no problem (assuming you use the "-l" parameter, anyways :-)
The messiest part of compiling MiNT (whichever version) is just
figuring out which archives you want to have to finish it
(GCC/libs/includes, patch, strip, etc)...

I have an ST with 1Mb of RAM and a hard drive. Is it worth me downloading an old version of GCC which fits into my memory? Atari Archive has a version where the executables are over 1Mb so I can't use that version but elsewhere I have seen versions (1.40 I think) where the largest binary takes up about 600K.

I've got Heat-And-Serve C just now but want GCC since they have that at University (not that I have had any problems so far between GCC at the Uni and HSC at home).

Advice appreciated.

I tried them both... The advantage of LGfS is that you can call Maxifile from
it... Makes it even more powerful than UIS3... and if you have Little green
footballs shell for ARC/LZH you can call Maxifile from it...

>With that said, I must admit that I have never tried WINX, so I don't know
>if UIS3 works with it. Perhaps someone could confirm this?

No I can't... I don't use them any more... Maxifile don't work with MultiTOS
and makes LGfS of no use... I use Selectric instead, wich I KNOW works with WINX..

(UIS3 vanished after one day on my harddrive... Not as good as LGfS OR Selectric!)

From: ford@esvax.dnet.dupont.com
Message-ID: <ford-140294095145@fordt.es.dupont.com>
Source record: 193048

Alas, I saw this problem several years ago, and I can't remember how I solved it.

Both of my Master 3S floppy drives started showing no Bytes, no files last night at the same time (machine was off a few days before this). I'm running an old 520 with 2.5 Megs RAM, early TOS (1.1??).

The 520 polls the floppy drive on startup, and normal desktop appears. Double clicking on the file cabinet icon opens an empty window, on disks which I know contain lots of files.

Anybody know the cause (and solution). I've checked all connections, etc.

Please Email as I don't read this group often anymore.....

Thanks!

All RAM on the TT is 32 bits wide. The difference between ST RAM and TT RAM
is that ST RAM is shared between video and the CPU and TT RAM (which uses
the 68030's burst mode) is not accessible by video.

>kernel it did use was proprietary, and so the code never appeared in the Free
>World... There's even a paper about it in an old Usenix Conference Proceedings,
>but I don't remember the specific reference...)

I've never heard of an X port to the ST. Two Lachman guys did do
extensive work on the ST version of UW. They didn't release the source
because they were supporting the code, and didn't want to get supporting
someone else's modifications. I've asked them about it, and eventually
expect one of them to dig up the source. I've already had a couple
of inquiries from persons who seem willing and qualified to support
and improve it... I think it may have been done in assembler,
so it may end up making more sense to rewrite in C or C++ at some point.

Apart from the odd game, I've never had a floppy do anything other than sit quietly waiting (no spinning) when it wasn't loading/saving.
This is on an STM/STe/MSTe/falcon. (Bloody hell, did I really buy every ST that appeared??) :-)

Source record: 192955

There was an interesting article about Atari in the Sunday (Feb. 14) issue of the San Francisco Chronicle. It started out with a big headline at the top of page 1 that said "Life after Pac-Man - Atari hopes to gobble up market share with video game Jaguar." It then jumps to a big spread in the business section with the headline "Atari wants back in the game." The article is a standard Atari-attempts-to-rise-Pheonix-like-from-the-ashes-with-Jaguar rehash, but what is interesting about the article is what Sam Tramiel is quoted as saying toward the end of the article. He discusses the ups and downs of the company under the direction of his father, Jack Tramiel. There's a lot of talk about the ST line of computers. He then is then quoted: "'He (Sam Tramiel) took a company that was worth nothing, took it up to half-a-billion in sales, faced the reality of a declining PC marketplace, and backed out again,' Tramiel said." BACKED OUT AGAIN? So, don't let anyone tell you that Atari hasn't pretty much abandoned its computer business. Sam Tramiel, Atari CEO, says so.

Anyone else but me having problems running "Blackhole", the Falcon game, written by someone on ... umm .. CompuServe I THINK .... I've seen it up on atari.archive so I guess several people must have tried it ...

My problem: When ran it displays an alert box saying "Needs to be run in 640*480*256" ... so? I've tried 640*480*256 .... same thing ... doesn't matter if you do a "clean boot" or a normal boot ... I've even tried 1024*768*256 to no avail ....

Ofcourse I'm trying on a Falcon .. ;) ... but I just can't get it to start ... it keeps telling me to use 640*480*256 ..

Anyone?

It's a bug in PageStream. On my plain jane STacy and STf, it sets any color higher than number 3 to black and you have to change it manually. Saving the default configuration does not work. This is most likely what is happening on your Falcon.

There is no fix that I know of. SoftLogik isn't interested in fixing the bug either.

The major problem when porting Ispell is RAM. This is because the building of the dictionary (hashlist) is very memory intensive, especially for decent dictionaries (>60K words). Even building them an a UNIX box is tricky because the format of the file is machinedependent (AFAIK).

Well now there's a news flash!!! I think we had all figured that one out.
If the Atari line survives it will be because of third party developers
creating clones similar to the Eagle, and Medusa, as well as new applications.

Brian

Hint: Be on the look out for programs that will allow Atari computers
to be able to use non-Atari specific CD-Roms :)

Even if it takes "only" 600 Kb, it still allocates huge amounts on memory
during the parsing... And you must add the size of the shell, that is almost
necessary to be user-friendly. GCC 2.5.8 executables take (for the C compiler)
1.2 Mb, and on my Mega STE 4, it sometimes eats all the memory and says 'out of
memory' !!!

I doubt you'll be able to do any good job with this :-(...

Can't help you there. If you have not already, you might want to check out 38400.lzh on atari.archive.umich.edu. It has English instructions.

> BTW I run a BBS on this system so using something that 'this piece of software' recognises is not what I need...

Many of these serial hacks come with software that will remap the standard baud rates up, so the 9600 baud button becomes 57600, or whatever. Thus, you should not have problems with programs not supporting the higher baud rates, as they can be "forced" to (not to say that this is guaranteed to work or anything).

Please post your results. I am toying with the idea of speeding up the serial port on my Mega4.

3016. WANTED: Info on BAREFOOT(Hybrid Arts) ATARI Support STATUS

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 21:01:29 UTC
From: rwn@cbnewsd.cb.att.com
Message-ID: <CL8Fqo.D0E@cbnewsd.cb.att.com>
Source record: 192969
Cross-posted to: comp.sys.atari.st,rec.music.makers.synth,comp.sys.atari.advocacy,comp.sys.atari.st.tech

I am looking for information on the current status of the BAREFOOT
SOFTWARE Company, who marketed Music Sequencing and Editing software
previously developed by HYBRID ARTS. The current phone numbers
for BAREFOOT are:

Voice: 818-727-7143
Midi BBS: 818-996-7659
FAX: 818-727-0632

For the past few years I have been using Stefan Daystrom's
"SMPTETRACK" professional music sequencing software with
SMPTE lock-up. I've finished moving and re-building my
studio and am looking to upgrade and add components to this
system. (Possibly upgrading my 1040 ST to a Falcon or ??, etc).

I have tried contacting the above three phone numbers and have received
"no answer", including no answering machine for the voice hotline.

What's the scoop ? Hopefully they have only suffered temporary
problems due to the recent earthquakes and will be back soon.

Any information would be appreciated.

Thanks,

Bob Neumann

What about using Selectric!? Very Nice, adapts itself to the screen size,
SHAREWARE.

It's on ftp.uni-kl.de I think.

Karl.

Message-ID: <CL8JD7.7G8@cid.aes.doe.ca>
Source record: 192973

In article <CL7nFz.xK@ryn.mro.dec.com>, nagel_e@cecehv.enet.dec.com (Besiktas...) writes:

|> Two weeks ago I heard from someone at Atari that Dave is experiencing some
|> problems with system 7, because sys7 apparrently is able to detect that it
|> isn't running on Mac hardware. So maybe he'll have to write a sys7 patch
|> program before we can use the new color spectre.
|>
|> Erlend.

So according to your info, Spectre 3.1 would support System 7 _and_ colour??

That would be great, but what I have been hearing all along in the Gadgets by Small areas in GEnie and CIS, is that Spectre 3.1 is strictly an intermediate version that is more TT-friendly
than 3.0.

But hey, maybe Dave will surprise us... (naah!)

Cheers,

Yves

3021. Request: database/spreadsheet advice

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 22:34:34 UTC
From: bula@snoopy
Message-ID: <2jou9q$g1q@tribune.usask.ca>
Source record: 192974

Hi,
A couple of weeks ago I posted a request for some advice/recommendations.
I spotted no response, so I am assuming that somehow my article did
not reach its destination. Anyway, I am persistent.

I will be looking for the following software that will run on Atari Mega ST,
4 MB RAM + a small and slow hard drive.

1. A relational single-user database system with some
programming capabilities (e.g. a macro language)
2. A spreadsheet with a macro language.

The above two programs must be able to import/export data from each other.
It is important that the programs are intuitive (easy to use by inexperienced
people).

I have no idea what is on the ATARI software market; myself I am not an
ATARI user and I am doing this research for my friends only.

COULD YOU PLEASE ADVISE ME WHAT IS AVAILABLE ON THE MARKET.
I will be grateful for your opinions, advice, recommendation, warnings and the
like.
If this is a FAQ, please give me coordinates to the ftp site.

Please respond by e-mail to
bula@snoopy.usask.ca

If there are more people interested in this subject, I will compile and post
the answers.

Greetings,

Witold Bula

Dept. of Math. and Stats.

>an autodialer. Unfortunately, probably due to my modem, it does not seem
>to be able to recognize when a connection has been made, so keeps dialling
>and dialling. So I use the Function key method anyway.

Okay, what I really meant is it needs a good auto-dialer. The one in
it is very very basic.
BTW: A couple of questions about it that someone might know the answer
to... How do you stop the dialer once you've started it?
How do you stop an ascii-upload once you've started it?
How do you stop a file replay once you've started it?

Please post your answer, don't mail it :-)

Craig.

3023. Re: GCC

Newsgroup: comp.sys.atari.st
Date: 1994-02-14 23:51:07 UTC
From: rgivan@cix.compulink.co.uk
Message-ID: <CL8nL8.EuA@cix.compulink.co.uk>
Source record: 192976

>I have an ST with 1Mb of RAM and a hard drive. Is it worth me downloading
>an old version of GCC which fits into my memory? Atari Archive has a

No. I would be very suprised if you can find *any* version of GNU C which
ran (usefully) in 1Mb.

>elsewhere I have seen versions (1.40 I think) where the largest binary
>takes up about 600K.

Well I tried 1.37 in 1Mb under MINIX. I had 789K free at the prompt, but
GCC couldn't even compile the basic "Hello World" program. 'printf()' was
too big for it!

Now I'm having trouble even with 4Mb. My copy of GCC 2.4.5 is most unhappy
with such limited memory ;-). GCC 2.3.3 is the last version I have
sucessfully used.

Roland.

From: jeff@leda.Arizona.EDU
Message-ID: <2jp4en$fqu@auggie.CCIT.Arizona.EDU>
Source record: 192977

I realize this may be of extremely limited interest to others, but I was wondering if any permutation of MULE made it out of the 8-bit regime? I know Electronic Arts is still alive and releasing some of the old 8-bit games for the IBM.

Even if you don't remember MULE, but know something about reaching Electronic Arts, please let me know.

Thanks!
Jeff

P.S. Just to point out something obvious that I found works great.... Since there are still dealers supporting the 8-bit machines, and you can get a used 8-bit for under $100, I think it makes a great game machine!

I still think the feel of the old 8-bit games beat out those of almost any other computer.

(Note that I used the word "almost", thus making this post completely uncontroversial)

Sorry this one is taking so long. It's really a matter of me finding time
to put it all together. Not being a Chess player myself, I'm 100 times more
likely to be found working on GEM NetHack than on GEM GNUChess!

(Now, if everyone had 4Mbyte machines and ST-Low didn't exist, there
would be no problem of making multiple configurations)

3026. Eastern Iowa Computer Fair

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 04:00:00 UTC
From: leland@ins.infonet.net
Message-ID: <2jphc0$6mi@insosf1.infonet.net>
Source record: 192979

On Saturday March 5, 1994 the Commo-Hawk Computer Users Group of Cedar Rapids, Iowa will hold our eleventh (11) annual Eastern Iowa Computer Fair.

This year the fair will include displays by computer user groups, retailers of computers and computer accessories, retailers of computer software, shareware distributors, and much more.

There will be hourly door prizes given away in addition to the GRAND PRIZE, which is a LASER PRINTER. You don't need to be present during the grand prize drawing to win the laser printer.

The following is information for the fair:

Saturday March 5th from 8:00 AM - 6:00 PM
IBEW Hall, 1211 Wiley Blvd SW, Cedar Rapids, Iowa

Everyone older than 14 years will be asked for a
strictly voluntary donation of $2 at the door.

For more information, you can e-mail to me: leland@ins.infonet.net
You could also call me, Leland (319-365-9627 please before 10:30 PM central time) or Linda (319-366-2347 please before 10:00 PM central time).

The following are directions for how to get to the fair (note: if you want me to e-mail you either a PostScript file containting a map, or a uuencoded file containing HP laserjet printer codes to print out the map, send me e-mail asking for it). The PostScript file is 136403 bytes, and the uuencoded HP laserjet file is 301646 bytes.

- Take I-380 to exit 20 (1st Ave West in Cedar Rapids).
- Go West on 1st Ave.
- After about a mile the road curves left (SW) and becomes Williams Blvd (highway 151). Be careful to NOT go straight and stay on 1st Ave when that happens; you want to curve left onto Williams Blvd.
- After about 1.5 miles you will come to 16th Ave SW (just past the Holiday Inn on the left). Turn right (west) on 16th Ave.
- Once you are on 16th Ave, the second stop light will be Wiley Blvd. Turn right (north) on Wiley Blvd.
- After about half a block the driveway into the IBEW Hall will be on the right (east).

Note that Cedar Rapids streets are not always aligned according to compass directions. For instance, when you turn onto 1st Ave you will actually be going more SW than west for the first half mile or so (then it curves around so that you actually are going west (until it curves off to become Williams Blvd).

Hope to see you at the fair. :-)

You can probably purchase a new power supply and install it yourself, if you
are leery of sending you machine off (though I have never had problems with
D&P or Toad). Best Electronics will probably have the part. Their number
is (408) 243-6950. I don't know of a source outside the US.

It would be great if the source were released to the public domain! ST
Unix Windows (the two versions I have worked with) are very nice but somewhat
buggy. Please do attempt to get the source.

I believe the answer is no at this point. However, I remember reading about a game in the works in Germany that is based on M.U.L.E. This is a great game! I don't know if EA is going to release M.U.L.E. for anything (and almost certainly not for ST/Falcon), but they have just recently released an updated Archon clone. I hear it is excellent.

Incidentally, I think quite a lot of folks that read c.s.a.st would love to see M.U.L.E. for the ST.

I tend to agree, for a rather large number of classic games. Go figure. All the power of newer machines, and 90% of the games are terrible (IMHO). Perhaps it is now too easy to add some glitzy graphics and call it "done" before the playability is there.

> (Note that I used the word "almost", thus making this post completely
> uncontroversial)

Ha! I'll fix that! Nintendo games suck balls, IMHO. In fact, one of the few Nintendo games I have seen that was halfway interesting was (wait for it) M.U.L.E.!! There exists a port of this great game for Nintendo. It can be found quite cheap, as it is old (even for a Nintendo game). I did not get a chance to actually play it, but the graphics looked like a faithful reproduction.

>Um, nowadays, 3.5" floppy disk media comes pre-formatted to MS-DOS
>standards.

Shows you when the last time I bought a 3.5" floppy disk was ;-) A LONG time ago. I have bought Flopticals lately, so I obviously am more in tune with those...

>Multi-volume backup means that if your backup fills one floptical,
>it starts filling up the next one, and the next one, etc. When
>restoring it, you read each disk in sequence until everything is back
>on your hard-drive.

I see... this can be worked around (counting the size of partitions, etc.) but I can see where this would be a bigger pain than normal, and I hadn't tried this (20 MB compressed with Diamond back is quite a bit of stuff, and I didn't backup originals since the original software disks are good enough for backups)...

3034. G++ problem

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 07:39:36 UTC
From: am136@FreeNet.Carleton.CA
Message-ID: <CL99A0.Bv4@freenet.carleton.ca>
Source record: 192986

I'm having a bit of trouble getting G++ to work on my Atari ST. I figured out (in the face of a total lack of documentation) that I should put the compiler binary in with my GCC binaries, but when I tried to compile a program like "main(){}" it complained (at the linking stage) about being unable to resolve the symbol "___main". I've tried setting every environment variable I can think of, to no avail. (I put g++.olb in the same directory as the GCC libraries.)

Has anybody managed to get it working?

Stephen

Why? The VDI can only handle the concept of up to 256 *pens* (Ok, it
is a horrible kludge), but that's no reason to emulate a LUT in
HiColour ("HiColor" if you're American :-) or higher modes.

Is that Crazy Dots behaviour with NVDI-ET4000, or out-of-the-box?

From: Iain.Laskey@barclays.co.uk
Message-ID: <CL9Fnv.t7@barclays.co.uk>
Source record: 192989

In article <2jrgin$1p0@pellew.ntu.edu.au>, roba@nutmeg.ntu.edu.au (Rob Adams TopFM) writes:
|> Is there anyway possible of convincing an STx to have more than 4 Meg of memory.
In the UK, a firm called marpet (marpet@cix.compulink.co.uk) do a board that allows some STs to go to 12Mb. The extra 8Mb looks like TT RAM AFAIK. It needs TOS 2.06 to work properly. The board is very cheap if bought unpopulated.

3038. Overscan on Falcon desktop

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 10:03:18 UTC
From: csulw@csv.warwick.ac.uk
Message-ID: <2jq6l6$8el@crocus.csv.warwick.ac.uk>
Source record: 192990

How do I get overscan on the desktop on my Falcon?

I know you have to change a line in NEWDESK.INF, but I don't
know which one, or what to change it to.

Paul
csulw@csv.warwick.ac.uk

>party.
As I said, I've already got Speedo + MTOS. What else can you get from
Atari if you buy the right machine? They original claimed to ship AtariWorks
and D2D, but I'm not sure that's still the case.

>|> 5) The CPU timing fix is done for free, but they charge 60GPB for the
>|> bass-boost/line-level fixes. That sounds like a lot of cash to me,
>|> what's involved in the fixes?
>Never heard of the bass boost.line fix. What is it?
The line-level fix lets you plug line-level inputs into the Falcon instead
of mic levels. This is important for recording from DAT/CD/Synth/Almost
Anything. And even for microphone recording, I suspect that my existing
mic preamps are better than the Falcon ones. The bass-boost fix removes
the bass boost (funnily enough) which is built into the audio out on Falcons.

AFAIK, ICD allows upto 512Mb partitions. Why not have a 100Mb boot drive and then 512Mb for the rest?
Why do you want one big partition anyway? if you get any corruption, you will be more likely to loose the lot, if you have seperate partitions, it makes for easier file finding, quicker access (one BIG dir structure will slow it down) and easier backup management.

Basically, all GNU stuff is originated on big Unix systems with tons of HD &
RAM. Hence they are written to be good and easily portable. They are not written
to be able to fit onto the lowest common denominator platform.
C compilers written especially for the ST are written from the ground up to be as
compact as possible and in this respect, most are pretty damned good.

Looks like your version of gnu.olb/mint.olb is out of date. The
definition of ___main (which is generated internally by gcc) has been
moved from g++.olb into the C library, where it belongs to.

: 1) Does the Falcon require a serial fix program (such as SERFIX20.PRG)?
: It was my understanding the Alan Page had indicated that such a fix
: was _required_ or Storm wouldn't work. (I've been having trouble with
: ZModem transfers when using Storm...)

There is no such Fix required, but recommended. You can choose between FastSer 0.96 (fast, reliable, does not support FALCON's LAN-Port, works fine with MiNT, XSDD) or HSMODEM (HSMODA02.LZH, fast, does support FALCON's LAN-Port with CoNnect > 2.4x, possible problems with MiNT, RSVF). FastSer includes FPATCH2, HSMODEM doesn't because there is no need for.

: 2) Does TOS 4.04 not require FPATCH2 and/or BCONMAP? I found that I
: could not get any INCOMING text to display on the screen when these
: were installed, yet OUTGOING keystrokes were received by the host
: machine. Is one or both of these the culprit?

FPATCH2 is recommended for TOS 4.01-4.04. If a program works without FPATCH2, it's a feature (sometimes intended, sometimes not). If a program does not work with FPATCH2 it's a bug! If a program only works with BMAPFIX2, it's a bug, too, because FPATCH2 is just a workaround for those (like Rufus 1.35). FPATCH1 is not recommended in any case.

Remember: If you don't use one of FPATCH2, BMAPFIX1/2, FastSer 0.96 or HSMODEM, it will not be possible to use the LAN-Port of the FALCON!

Bye,
Knarf

Source record: 193000

One would question the sense behind producing these machines...given that Atari are pretty much abandoning the computer scene, why on earth produce a clone, even with great specs. Its all well and good having a superb piece of hardware but if Atari are uninterested, even in their latest products (the Falcon) how long before eveyone else goes, and the software is non-existant.

When I brought my Falcon030 I really believed that Atari would put some work into it and I would have machine I could be proud of. Well, once again they let me down. I am a great fan of the Falcon, don't get me wrong, but this sort of thing really annoys me.

I did not pay all that money mere months ago to have the company just turn their back on me for a games console.

Michael

Mainstream Software Solutions. 0242 227377. 2 Court Mews, London Road,
Charlton Kings, Cheltenham, Gloucs. GL52 6HS.

Very helful - they know about Speedo on Falcons! They can send you a catalogue
of all fonts. The WP6.0 is an extra flyer so make sure you mention it if you
want info in the font list they send out.

WP 6.0 Pack - 29.95+VAT+delivery. 50 fonts including Allegro, Staccato,
Thunderbird, VAG, Vineta, Garamond, Slabserif, Gothic, Freehand, Fraktur,
Calligraphic and more.

I've got the following ST stuff for sale, some at lower prices, some new software. It's all in good shape and all the boxes and manuals are included (except where noted). If you don't like the prices, make me an offer.

- Magnavox 1CM135 14" stereo color monitor. Includes cables for the ST. For ST low and medium resolutions. Great for STe's. Also can be used with a VCR, video game, etc... (it has composite inputs). Can also handle digital RGB input. $175
- Atari SM124 Hi-Res monochrome monitor. $75
- Several Atari manuals, including Mega ST, SH Hard Drive, Megafile Hard Drive, and ST BASIC Sourcebook. FREE
- Populous and The Promised Lands Data Disc. Not for STe's. $5
- Timeworks Word Writer ST $10
- ST Copy - FREE (NB)
- Warhead - excellent space flight simulation/adventure. Works on TOS 1.62, but not 2.06. $10
- Powerdrome - 3d racing game. Two players with two STs or an Amiga. $5
- Space Harrier. Works on TOS 1.62, but not 2.06. $5
- Sky chase. Great head to head jet battle on a single ST. Works at 16 MHz (superfast) and on TOS 1.62, but not 2.06. $10

NB = No Box

I can be reached at home in the evening at (708)882-5418, or reply to this message.

The source for a monochrome version of UW used to be included in the the
source for gemlib (the one for gcc). Check if it is still in there, if not
I think I have it somewhere at home, and can upload it to a.a

I experienced that Gemdos in TOS 3.06 does not support partitions > 256MB,
I'm afraid it will be the same for TOS 1.06. The Gemdos in TOS 4.0x (Falcon)
does support bigger partitions.

> Why do you want one big partition anyway? if you get any corruption, you will be

In addition: a 512MB partition ==> 16KB clustersize ==> wasting lots of
hd space. Of course this does not apply to minix filesystems, but keep in
mind that the number of inodes is limited to 65536.

In a message of <09 Feb 94 01:24:36>, "Daron Brewood" (1:286/2) writes:

"B> From this am I correct in saying that the original memory was
"B> actually 6 megs, with 4 mb accessable, or is the missing 2 megs of
"B> memory used to keep
"B> track of the rest of the new memory?

The Falcon has a 16 mb linear address space that is used by the system. Part of this is used for RAM and part is used for the OS ROM and I/O address space. The 2 mb that you loose is the memory space that is reserved for the OS ROM and I/O space. This is akin to 320k that you loose on a PC's 1 meg address space, or the 16k that you lost on the old Atari 8-bits.

Later,

3059. Cubase question

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 14:53:47 UTC
From: dwallace@wam.umd.edu
Message-ID: <2jqnlr$cjn@cville-srv.wam.umd.edu>
Source record: 192913

I have recently been having a frustrating time trying to integrate my
MIDI equipment with ST-sampled sound. If I am using a MIDI sequencer like
KCS, I can't use sampled sound. If I am using the sequencer on my drum
machine to play samples through Replay 4, I have to switch samples manually,
which is very sloppy.
Anyway, I recently read a writeup of Cubase for the Macintosh in a magazine,
and it sounds pretty nifty; it apparently lets you do _real_ sequencing with
both MIDI and sampled audio. My question, which I ask with crossed fingers,
is will the ST version of the program allow this miracle to be performed?
In particular, how well does Cubase Lite (or whatever its called) function
in such a capacity? Replies via email would be sincerely appreciated, as this
all sounds too good to be true. Also, any general info people could give me
about the capabilities of Cubase would be great. Thanks!

3060. Re: Blackhole?

Newsgroup: comp.sys.atari.st

> in 640*480*256" ... so? I've tried 640*480*256 .... same thing ...
> doesn't matter if you do a "clean boot" or a normal boot ... I've even
> tried 1024*768*256 to no avail ....

Hmm... Now this is VERY strange! On my Falcon I get the very weird alert
saying: "This program can only be run on a Falcon030" or something similar...
???? I HAVE a Falcon030, I'm USING a Falcon030... I've tried all kinds of
configs but it always tells me that it can only be run on a Falcon030...

Anyone who can help me as well?

Greetz, magnus_thylander@p4.troed.ct.se...

From: Iain.Laskey@barclays.co.uk
Message-ID: <CL9tvs.Gv@barclays.co.uk>
Source record: 192916

In article <2jqnlr$cjn@cville-srv.wam.umd.edu>, dwallace@wam.umd.edu (He whose name must not be spoken...) writes:
|> Anyway, I recently read a writeup of Cubase for the Macintosh in a magazine,
|> and it sounds pretty nifty; it apparently lets you do _real_ sequencing with
|> both MIDI and sampled audio.
|> This sounds like Cubase Audio which only does sampling with the Falcon. It performs multitrack direct to HD sampling in conjunction with it's sequencing abilities which are, as you say, very good indeed. Cubase Audio is not cheap though - you'll need 700GBP for the software and then need a big hard disk to sample to - 1Gb is reasonable.

|> My question, which I ask with crossed fingers, is will the ST version of
ST Version??? Cubase originated on the ST!

|> the program allow this miracle to be performed?
Not on a normal ST

|> In particular, how well does Cubase Lite (or whatever its called) function
Cubase lite is a cut down version of Cubase. Basically there are three versions. Cubase is the standard one. Expensive but good. Cubase lite is cut down and much cheaper and Cubase Audio adds direct to HD sampling on a Falcon.

|> about the capabilities of Cubase would be great. Thanks!
Cubase is very, very powerful, easy to use and not very cheap. It's really aimed at the pro musician. Maybe you ought to consider something a little more downmarket? Pro 24 III is good for the price - I have seen it sold very cheaply - 40GBP in the UK - it used to be over 250GBP at one time. It's the predecessor to Cubase but works in a totally different way.

It must go.. no room left in my new place. :-(

1040ST, 1MB RAM, TOS in ROM, Internal Power Supply, Internal DS Drive.
External Atari DS disk drive
SC1224 Color Monitor
Mouse Master - Allows easy switching between mouse and joystick.
Wico Trackmouse - Trackball-type mouse workaround. Mouse port in
back so you can use mouse, too.
Wico Bathandle Joysticks (2)
Supra 2400bps modem, Hayes Compat (no compression)
Synchro Express Hardware/Software copier with software. Copies most
things.

Bought Software, with original boxes and manuals (usually)
Summer Challenge
Populous
Klax
Dragons of Flame
PowerMonger
PowerDrome
DeathBringer
Indiana Jones and the Last Crusade

20-30 disks of graphics, Spectrum pics, etc.
More than 150 disks total, with all kinds of software, plus a couple
of disk holders for them.

$300 or best offer. Send me offers or questions. Computer is
located in Central Coastal New Jersey.

3063. TOS Error #34

A really good COD plan is to use FedEx. I'm not sure if this has been covered, but FedEx has some really good security measures, for BOTH sides:

* When you set up a FedEx next day delivery, they ask for payment style and ask for an inventory of the items shipped.

* When it arrives next day, exact payment is the ONLY option (very cool). Cash means cash, not personal checks, not money orders, nothing else. So any means of payment can be requested.

* The purchaser can INSPECT THE ITEMS before paying, and make sure nothing is amiss.

* The COD arrives back to YOU through FedEx delivery to your door the DAY AFTER! Sure beats waiting 10 business days through UPS or the Mail.

Well,at least that's how it all works here in denver. I'm using it every chance I can..

Why compete with the PC?

Why not let Atari make a PowerPC, running MultiTOS and Windows NT?

That will fit in in the above quote ... "backed out" .. backed out from trying to convince people a computer NOT running Windows CAN be useful ... let the people have what they want, and then give us what WE want .. a Falcon "compatible" "jaguar-chip-expanded" PowerPC ..

Daydreaming as always .. ?

Source record: 192926

I have a friend who is considering going to St. Andrews University, Scotland next year. He has a Falcon with 4 meg, internal and External Hard drives. At St. Andrews, he has the option of a room with an Ethernet port in the wall.

Will it be possible (with or without additional hardware) to connect the Falcon into this network?

Also, if anyone reading this is at St. Andrews University, please could you send me any info. you have on the computing capabilities there? Particularly, is FTP, IRC, UseNet, E-mail, FSP, 'talk'ing possible?

As this is not really general interest (or atari interest) please follow up via E-mail.

Many thanks,

Steve Taylor.

3071. Press Release: CWCII Update

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 17:48:48 UTC
From: hutch@bellman.lanl.gov
Message-ID: <1994Feb15.174848.12378@newshost.lanl.gov>
Source record: 192927

Kindly forgive the following announcement but some folks wanted to know...

==========
PRESS RELEASE
==========

Missionware Software and Fair Dinkum Technologies are pleased to announce
the immediate availability of a significant upgrade to the popular Atari
utility, 'Crossword Creator II' (aka, CWCII).

Among other enhancements, Release 1.73 includes the following new features:

*** Selectable fill patterns for unused puzzle squares in both
draft and final quality print modes (save on ink and toner!).

*** Selectable puzzle border widths.

*** Editable credits text (e.g., "Puzzle designed by John Doe").

*** The Print Word List option now prints alphabetized listings
of both used and unused words.

*** User defined minimum acceptable word fit percentage feature.

*** Add words from a Word List to an existing puzzle.

*** Duplicate used or unused words are now caught and eliminated.

*** Enhanced final quality print modes for Epson FX, HP LaserJet,
and HP DeskJet compatible printers.

*** Improved performance on TT and Falcon030 computers.

*** International Mode may be toggled on and off with a keypress.

*** Delete all unused words with a single keypress.

*** Plus other minor enhancements and improvements.

'Crossword Creator II', the easiest-to-use and most capable crossword
puzzle generation utility for all Atari ST/STe/TT/Falcon (mono or color)
computers, is now even better with the availability of Release 1.73.

CWCII is still just $34.95 + $3 shipping & handling (foreign orders extra).

Available directly from the exclusive distributor:

Missionware Software, 354 N. Winston Dr, Palatine, IL 60067
(24 hour order line 708-359-9565 or on GEnie: J.TRAUTSCHOL)

Upgrades (for registered CWCII owners only!) may be ordered directly from:

Fair Dinkum Technologies, P.O. Box 2, Los Alamos, NM 87544
(24 hour order line 505-662-7236 or on GEnie: HUTCH)

3078. CBM/Atari Stock Speculation

Newsgroup: comp.sys.atari.st
Date: 1994-02-15 20:15:44 UTC
From: hicksm@hindmost.lpl.arizona.edu
Message-ID: <2jrahg$dje@auggie.CCIT.Arizona.EDU>
Source record: 192933
Cross-posted to: comp.sys.amiga.advocacy,comp.sys.atari.st,misc.invest

After following Atari as is went from about $.50 a share
to peak at over $15 a share over the course of last year
(what the hell was happening, anyway?), I wonder if
Commodore could undergo similarly spectacular gyrations.

As you may know, CBM, which has the ticket symbol CBU,
is trading around 3-3.5 after a slump down to 2 last
year.

It is very clear that glory days of early eighties are
quite over (but the same can be said for Atari Corp).

Is there any reason to believe that Commodore can make
money for the speculator in the short-term? I would
like to hear your opinions.

I heard a rumur that the AAA chipset is set to be
bought out by Hewlett-Packard. I believe if this is
true than the price of the stock could easily rise
by a factor of two to three upon any official announcement.

Is now the time to buy?
-Michael

>

I don't need direct-to-disk recording - I already have a very nice 4-track.
What I'd like is means of doing MIDI sequences with integrated samples on
the ST. I have KCS Level 2, which is quite nice for straight MIDI, but it
irks me having a nice sampler on the ST, and not being able to use it at
the same time. The only things I've seen which integrate MIDI and ST samples
are Quartet (which is useless for any real applications) and a program which
appeared on a magazine cover disk, which I think was called Superconductor,
which did a really bad job of handling samples.
It seems to me that there really ought to be a program SOMEWHERE that can
do what I need without making me have to go buy a Falcon (if it came down
to that, I'd just opt for a nice Akai sampler instead). I don't even absolutely
need polyphonic sample playback, although that would certainly be preferred...
Does anyone have any suggestions?

3080. Re: Problem with ICD Link

Newsgroup: comp.sys.atari.st

From: sasmesba@kingcong.uwaterloo.ca
Message-ID: <CLAA7I.CG8@watserv2.uwaterloo.ca>
Source record: 192935
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Thanks to everyone who replied on this. The problem is solved.
The LINK requires termination power, the Advantage+ doesn't.
BOTH require disabled parity (this was not my problem).
It seems that the 85meg drive was the only one supplying the TERM POWER
(although it had no jumper to select this). Both the 105 and 213 weren't
supplying it. I didn't have jumper specs for either drive, so I just
tried all the jumpers that I didn't know on the 213 (non SCSI-ID, parity,
or spin-up) until I found the one that worked. This solved the problem,
the Link works fine.

Thanks again to everyone for the suggestions,
Sam

Well With the Jag selling faster than they can make it, expect it to go up even more.

> It is very clear that glory days of early eighties are

> -Michael

First off, with CBM stock low and with them selling 400,000 CD 32 units in Europe, yeah its time to buy.

Now I'm a bit disagreeing with your second paragraph. The glory days are not over, for either atari nor commodore. Why?
1. They both have systems that are flying off the selves. They are both good game systems with solid 3rd party support for atari and decent for CBM
2. They are both "hungery". They've been at the bottom for close to 8 years now. (since 86) While they both have been dropping the ball, I don't think they will do it again.
3. They both have "next generation" systems out long before anyone else does.
a. Ok, there is the 3DO. Its overpriced and over rated. The consumer sees this are all sales reports are that they staying away.
b. Nintendo is promishing the SGI based system in 95. First off, the relationship between the two are strained and SGI isn't happy. Second, they are showing off a 10,000 work station and saying their system will have the same graphics for $250. Alot of people are going to be dissapointed.
c. Sega has asked Microsoft to write the os for their Saturn system due out in 95. Yes, Microsoft. So assuming it sees light by 96, it'll be out classed.
d. The Sega CD, while selling well, isn't doing that hot. (I've noticed that almost all the CD ads have stopped) The point is, they aren't

that great. The 64 color restriction hurts with movie type games. The general push seems to be towards a cable chanel.
4. Assuming that they both do well and keep their computer lines (atari is looking like they will back out of it) they might still have a chance there too. The dos/intel computer powerhouse (market wise only) is fragmenting. By 95, dos will only be a bit player in the intel market being split by NT, Windows, Unix, Chicago, OS/2 and some Mac os due out for intel. PLUS new power pcs and risc computer to fragment the market. The niche (and a rather large one) of home computer is being ignore. A new Risc based Amiga or PPC based Atari in 95 under $1000 could draw alot of attention.

Noone else seems to have posted this info here (just bits of it),
so here goes.... (I wouldn't have a clue where it came from)

Craig.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~

<====================>

PANDORA/MEDUSA T40

================================

The first 68040 Based Atari Clone, now available at LEXICOR SOFTWARE CORP.

PANDORA/MEDUSA T40

MC 68040 at 64 Mhz
Internal FPU and PMMU
Performance is around 26 MIPS, 4.5 MFLOPS

Main bus is:
32 Bit Data, 32 Bit Address
Bus Clocked at 32 Mhz
Full Bus snooping read and write

Atari bus is:
16 bit Data, 24 bit Address
Bus snooping, write
Own ACSI Address for full 32 Bit Address

Fast RAM
Can hold 8-128 Megabtes on board
Write 73 Mbyte/sec
Read 85 Mbyte/sec

EPROM is
2 MByte on board
32 Bit Wide

TOS 3.06 modified slightly

- ST I/O Board

-DMA
-MIDI
-SERIAL
-PRINTER
-KEYBOARD
~~~~~~~~~~~~~~~~~~~~~~~~~~~~

-FLOPPY DD, HD, ED
-2 SERIAL PORTS (like TT Modem) (upto 115KBaud)
-IDE Bus (12 Mb/sec)
-ISA Bus (for own custom Graphics Board)

(This ISA Bus will work with any ET-4000 Based Graphics Board on PC Platfor
with the NVDI ET-4000, however NVDI ET-4000 only supports upto max. 32,000
colors as of this date)

Additionally you can get:

-VME Bus
VME Bus 16bit
Laser Printer Port (?)
ROM-Port
Mega Bus
-SCSI Board
TT SCSI
SCSI II
TT Lan
-DSP Board
DSP96002

and an MC68060 Board is sceduled for the year 1994

LEXICOR SOFTWARE CORPORATION

(510) 848-7621 - (510) 848-7613

Here's a Price Breakdown in United States Dollars, users in North America
will have the main parts assembled in the U.S.A. as parts are a lot cheaper
here.

The MEDUSA T40 is ideal for the high-end Atari User. Based around TOS 3.06
is very compatible. Following this message will be a short list of working
programs.

- Basic Motherboard 68040/64
- Tower Housing
- ST Input/Output Board

Cost is: 2,490 U$D (Cost can vary depending on the exchange rate)

Availability: NOW, Transport time should take no longer than 2 Weeks!

Additionally you may purchase an ET-4000 Graphics Board 15/16bit Color
onboard for about another 100 U$D + NVDI ET-4000.

A VME Bus Multiple Bus Board (see description above) for another 400 U$D

8, 16, 32, 64 or 128 Megabytes on board, price depending on SIMMS, current
price is around 40 U$D per megabyte.

IDE Internal Drive will cost depending on drive size. Internal IDE, no
external casing required.

NOVA VME 16M Graphics Board when purchased with VME Bus (for 24bit Color)
costs 489 U$D.

All prices given are Recommended Retail, shipping not included!

>that to be true...

Such a limited imagination ... from a philosopher no less :-). HIDETREE
prevents the object from being drawn, but not from being found by
objc_find. At least that is the behavior on my system (TOS 1.0).

>Hendrik Jan Veenstra (hjv@phil.ruu.nl) Dept. of Philosophy

Immanuel Kant was a real piss ant ... (If you don't know, don't ask :-).
Sorry, I am in a silly mood, and I don't like Kant.

> and mail it to me !!!

Mupfel (part of the Gemini 1.x desktop replacement; it's also a separate
shell in that package) has a cat, but it's very (VERY!) slow for
concatenating files.

The venerable gulam has a cat (and a MicroEMACS built-in), but I don't
know anything about that, since I don't use it.

I thought the tfork() call didn't actually do anything... Am I wrong,
and MiNT has actual, working threads? If so, I've got some interesting
playing to do... I was thinking of a really groovey way of implementing
PBM-Plus using named pipes or sockets and threads...

If you're using GNU C, -mbaserel will make your code sharable... ex:

gcc -mbaserel -O -o hello.tos hello.c

will create a sharable hello.tos; multiple copies in memory at the same
time will use the same code and have separate data areas.

> i'd really like the programs to share memory. pexec mode 104 should do this

Hmm, sounds like you want to use shared memory then... ;-) Check the
shared memory docs in the MiNT distribution. (I'd give you an example,
but I haven't used it yet...)

* lexicor-list@world.std.com *
* *
* AT "The World" in Boston *
****

* INFORMATION ABOUT SUBSCRIBING AND IDEA *

to subscribe to this forum you need to request to lgsl-request@world.std.com
and type the following:

subscribe email.address.com firstname lastname

to unsubscribe you can do the same except just do unsubscribe etc. etc., if
you need help with certain files then just type at the request:

<Product Name> request info

and information on that product will be emailed to you privately providing
we have it...a list of the products of which we have information shall
follow soon. This will at least ensure that not everbody will want to get all
the product info and are forced to get it too.

* INFORMATION ABOUT SUBSCRIBING AND IDEA *

This is a new mailing list, and is meant to combine all user's on every service
may it be free or commercial in one bundle, so GENIE user's, Compuserve, cix,
maus, fido, delphi etc. all with internet connections to a general Atari
Graphics Forum...sponsored by Lexicor Software Corporation.

This mailing list is now officially opened at the 4th October 1993, many thanks
go to the staff at world.std.com, the oldest public internet service in the
U.S.A. for their support.

* TO THE LEXICOR AND GRAPHICS MAILING LIST *

Welcome to the Lexicor Software and general Atari Graphics
Information Mailing-List.

I welcome you all to this new mailing list which will discuss
the new graphics hard & software that is available for the old as well
as the new Atari Hardware.

Of course, Lexicor hard & software products will be discussed, as well
as other hard & soft products for Atari. It matter's not that a Lexicor
has opened this general mailing list, as the other members of
the graphics list are there to shift and talk to whatever field they
like (on and around Atari Graphics).

By Atari Hardware I mean from the old 520 STFM line, 1040 STE upto
the MEGA STE's, TT'030's and naturally Falcon'030's. I will try to
scoop up the newest information I can get, as well as I will be
relying a little on what you might dig up, and discuss about the latest
Atari Events concerning graphics around the Atari World.

But Atari Graphics goes also into the realms of general graphics
question and answer painting tools, about discussions of rendering
and raytracing techniques, and consequently about the production of
faster machines (much needed for fast raytracing) such as the TT-Clone
from GeSOFT called the "Eagle" or the Medusa both from Europe which
have 50 MHZ 68030 and/or even 68040.

Atari Graphics is also about Desktop Video, Genlocking, Desktop
Publishing, 2D or 3D Animation, rendering, raytracing, pixel painting,

drafting, there are so many of them...I could never list them all.

We might even be discussing the potential of the Jaguar as a future external graphics tool..controlled via th Falcon as the ultimate low-cost graphics workstation! (Optimist I am!) Future plans..and ideas are welcomed!

I hope you enjoy this new experimental mailing list.

Have fun!!

>
> Don't wanna spread rumors, and don't put your hopes up too high, but this is
> exactly what I've heard Atari will do ... (and I've heard it from usually very
> reliable sources .. ;)

But then, look at it this way:

1) Can Atari produce a PowerPC-based machine and sell it cheaper than either IBM, Compaq, Apple, or any of the other houses building PPC machines (for example, Dell might be one of them, and I'm sure other mail-order clone houses will follow). Atari used to be "Power Without The Price!" but they certainly can't claim that these days, and there's no way they can compete with much larger clone makers.

2) Can Atari build something decent? I mean, when you look at it, TOS isn't very suitable for such a high-powered machine. As far as TOS is concerned, the 68030 is just a fast 68000... it doesn't make any use of the MMU, for example. It'd be about as bad as running DOS on a Pentium system; oh, I guess people like to do that too. :-(

3) How will Atari differentiate its systems from the other ones? The Apple systems will be Macs, with those weird floppy drives and that simple (non-preemptive, non-protected) OS/GUI. IBM systems will probably be in really ugly PS/2 cases (like the RS/6000) :) and run AIX and eventually Workplace OS (OS/2's successor). What will make Atari's machines stand out? Drop a DSP into it? Gee, Apple's machines will have those. For it to be worth their while, there has to be a _reason_ for people to buy Atari instead of Brand-X; brand-loyalty has only sold ~20,000 Falcons... it probably hasn't paid for the R&D Atari had to lay out.

That btw (also known as Xenomorph 3D in Europe) is updated to version
2.0 and has been greatly improved, it boasts some great new features.
It is a 3D Rendering Package, art package is sort of misleading :)

Thanks for the time in creating this list :)

>
> What's wrong ?

I've noticed this too, mostly with my C++ code, since I tend to have
files like:

Class.h
Class.cc
testClass.cc

When I compile, for example, "testClass.cc", I'll end up with
"testClas.o" instead of "testClass.o"... This is more noticable on
things like "testDiceRange.cc", which comes out like "testDice.o", just
like "testDice.cc"...

I think if we ask bammi nicely, he'll fix it... ;-)

Well, if you're comfortable with command-line programs, you can use
UnZip 5.1... A new (and improved!) version of a free program, I've just
uploaded the Atari port to a whole bunch of ftp sites. Look for
unzip51b.tos for a self-extracting archive full of everything you need.

Alternatively, Vincent Pomey's ST-ZIP (which should be available in a
.TOS self-extractor too) has a nice GEM point-n-click interface for
making/unpacking ZIP files.

Is it possible to change those TOS 4.x colour icons yet? It's easy as
pie on a Mac (or a PC using OS/2).

> 2. TOS 2.xx and upwards offer about the same.

NO way, in the Desktop, to change icons... you have to add them with a
RSC editor, and then hope that process didn't mess up your other icon
assignments, etc...

> 3. Big deal, so does everything else. Except ST TOS is a lot more

True, true.

> Comparing with TOS 1.xx Mac OS v6.xx.xx would beat it. Anyone using
> System 7 on a machine under 40Mhz must be mad. Stick with 6.0.8 and
> Multi-Finder!

System 7 is fine on any system 33Mhz '030 or faster (ie, any '040
varient, and all Macs currently for sale, unless they still have the
wimpy 16Mhz '030 machines)... The only thing you have to watch out for
are those few Macs with no VRAM, since VIDEO CONTENTION (can you hear
me, Falcon owners?) can slow those machines down tremendously.

Personally, I don't like the Mac; there's no way you can tell me that
any compiler's "integrated development environment" is going to be more
productive than a good shell, make, and tools like sed, etc.

multiple target volumes. for example, If I tell it to back up a 32meg
partition, it backs up about 20 meg (i.e. size of floptical) and then
gives an out of media error. I expect it to prompt me for a second disk.

clearer?

Folks, I am reponding to the original poster, and a followup. Watch for
the attributions.

rcmerrit@apgea.army.mil (Robert C. Merritt <rcmerrit>) writes:
>In article <2jrahg$dje@auggie.CCIT.Arizona.EDU> hicksm@hindmost.lpl.arizona.edu (Mike
Hicks x2692) writes:
>>
>> After following Atari as is went from about $.50 a share
>> to peak at over $15 a share over the course of last year
>> (what the hell was happening, anyway?), I wonder if
>> Commodore could undergo similarly spectacular gyrations.

Videogames, multimedia and Cable Television are hot, hot commodities. Atari
cashed in on this when selling their Jaguar system to investors. Commodore
is hoping to cash in with their not quite finalised deal with HP to license
the AGA chipset for a set top converter.

>Well With the Jag selling faster than they can make it, expect it to go up
>even more.

That is open to interpretation. There is an opposing opinion that Jaguar
shortages are due to Atari being strapped for cash, and unable to pay to have
more made. The CNBC report didn't help matters.

>> Is now the time to buy?

Only if you lead a boring life, and have money to burn.

>First off, with CBM stock low and with them selling 400,000 CD 32 units in
>Europe, yeah its time to buy.

I have heard anywhere from a low of 140,000 to 400,000 quoted.

>Now I'm a bit disagreeing with your second paragraph. The glory days are
>not over, for either atari nor commodore. Why?
>1. They both have systems that are flying off the selves. They are both good
> game systems with solid 3rd party support for atari and decent for CBM

Both companies can produce impressive lists of developers, but many of these
developers are taking a "wait and see" attitude before commiting resources
to long term projects.

This hurts the Jaguar more than the CD32, at least initially. The Jaguar has
4 titles available, and that is likely to remain the case for another 2-3
months. Even then, it will be a trickle of new software -- a title or two a
month. Atari absolutely needs "the killer app" to keep the Jaguar in the news.
Perhaps Alien vs. Predator will be it.

The CD32 benefits from being based on a existing platform, thus the glut of "shovelware" titles available. This makes for decent software sales numbers, but doesn't necessarily show the system in the best possible light. Only until software is developed expressly for the platform does this change.

>2. They are both "hungery". They've been at the bottom for close to 8 years
> now. (since 86) While they both have been dropping the ball, I don't
> think they will do it again.

Let's hope. Keep in mind, though, that the same people are in charge that put these companies where there are now.

>3. They both have "next generation" systems out long before anyone else does.
> a. Ok, there is the 3DO. Its overpriced and over rated. The consumer sees
> this are all sales reports are that they staying away.

The 3D0's price will be cut 34% in the next few months. This means that you will probably be able to pick up a 3D0 for $450.00 soon. This is the cost of the Jaguar + CDROM, and $100.00 more than the CD32. However, I expect that the retail on the CD32 will drop to $300.00 by late fall. The Jaguar's price will remain constant. The $200.00 Jaguar will be a system with no pack in game. Atari needs cash, and they aren't going to get it solely from software sales. They can't afford to sell the Jaguar as a break even proposition.

> b. Nintendo is promishing the SGI based system in 1995.

Like they promised a CDROM drive for the SNES for $200.00. They are 2 years away from a shipping system -- the "Reality Engine" won't be a reality until 1996. By then, there will be the Sony PlayStation-X and Sega's Saturn to contend with.

> c. Sega has asked Microsoft to write the os for their Saturn system due out
> in 95. Yes, Microsoft. So assuming it sees light by 96, it'll be out
> classed.

A leap of logic. Not everything that Microsoft does is junk. And Sega is a marketing powerhouse at the moment.

> d. The Sega CD, while selling well, isn't doing that hot.

The SegaCD flopped in Japan, but it actually has sold okay here, considering it's cost and capabilities. This bodes well for the CD32.

>4. Assuming that they both do well and keep their computer lines (atari is
> looking like they will back out of it) they might still have a chance there
> too. The dos/intel computer powerhouse (market wise only) is fragmenting.
> By 95, dos will only be a bit player in the intel market being split

> (and a rather large one) of home computer is being ignore. A new Risc
> based Amiga or PPC based Atari in 95 under $1000 could draw alot of
> attention.

Dream on. With all the nice, alternative OS's available for Intel based machines, most continue to use Dos/Windows. It's application driven. Most people could give two hoots about what OS they are using. They are only concerned with compatability. And if the OS is too slow for their needs, they simply buy a faster machine. People will buy PowerPC based machines if they are marketed as systems that can run Windows based applications faster.

>
> Erlend.

Spectre 3.0-->3.1 has nothing to do with color, it only fixes a few TT bugs, ie., the use of TT-RAM, and SCSI hard drives, which we currently can't do. As of last summer this was at least in beta tesing (Dave himself actually posted on the net looking for testers--fool that I was I didn't say I would), but nothing has been heard of since.

A color Spectre is a MAJOR upgrade, since this means emulating a Mac II instead of a Mac+. This would require not only new software, but new Mac ROMs, since Mac+ ROMS (which all Spectre owners have) do not support color. This may also require a new GCR cartrige, since the color ROMS are >128k.

Running System 7 with new software may be possible, but I haven't a clue why anyone would want it. If I were to buy a new Mac out of the box I'd take System 7 off and put 6 on, first thing (just my opinion...).

However, at present I don't care about Sys 7 or color and would be happy if I could just get my hands on Spectre 3.1 for my TT. I wrote (ie., with real paper and everything) Gadgets a few weeks ago about it, and have yet to hear anything back.

>or 4.04 machines.

I'll assume you mean 16-color mode, I haven't used this fix in 256
color mode, and unsure if it would work there...

Load up Pagestream. After it turns the screen black, reset via the
"Control Panel" -> Color Setup -> Reload route (which I guess you
already have done).

Then, open up the Global -> Change Screen Colors box under Pagestream
- it should give you a color editing box that looks similar to the
Control Panel Color Editing box. Click on a pagestream color - the
the world will turn black again. Edit the color to be the same as the
control panel color (you did look at the color values for that box
before you clicked on the pagestream box, right? Make this color
choice the default, then repeat until all of the pagestream colors
match the control panel colors. Now, the next time you load up
pagestream all of those colors should be the defaults, and nothing
will alter.

What I would like to be able to do in Pagestream is actually see color
pictures in color. Oh Well. I don't have a color printer anyway, and
I don't do anything color anyway, so I guess I don't need it...

Enjoy,

For one thing, Atari's stock never hit $15 a share. It didn't get past $13.
$2 is A LOT!

>

> Is now the time to buy?

You wouldn't by chance be one of those shareholders that bought Commodore's
stock at $15 when there was rumors HP was going to buy them out before.
And then there was rumors Nintendo was looking at their technology.

No, nothing is going to happen and the stock is still going to sit around
$3.00 until it is over!

```
NEC 3D Monitor For Sale
=======================

- Just over 1 year old
- All digital controls
- Screen position memory
- Tilt/swivel stand
- 0.28 mm dot pitch
- Horizontal Sync: 15.5 - 38 kHz
- Vertical Sync: 40 - 80 Hz
- Perfect for Amiga (regular or AGA) or Atari ST/TT/F030 owners
- For PC users, will do 800x600 NI @ 60 Hz, or 1024x768 interlaced
- Original box and manual
- $310 INCLUDES shipping

Sorry, no COD. The reason is that I just ordered a used 17" and I
need to get the money here for this one in time to pay for the new
monitor. I moved from an Amiga to a PC and don't need the low scan
rate of this monitor. It works perfectly and has an excellent picture.

Please send Email to ROB_G@Delphi.com or 74103.140@compuserve.com.

Thanks!

Rob

Beim Schreiben auf eine Partition hat mein Freund die folgende Partition
ueberschrieben. Toll, ne? Gut.. Ich habe mich ueber den Root-Sektor und die
verketteten Hilfsrootsektoren (die Partition war zu allem Uebel auch noch
eine aufgeteilte Partition -> XGM-Kennung) bis zu der Stelle durchgehangelt
wo die Partition anfangen muesste. Da steht natuerlich nichts mehr. 86
Sektoren weiter steht jedoch noch das Directory.
MEIN PROBLEM: in diesen 86 Sektoren muessten doch 2 FATs Platz finden. Nun
ist/war die Partition aber eine 20MB Partition und eine andere 10MB
Partition hat pro FAT alleine schon 41 Sektoren!?!

Also:
1) Wo kann ich beim Berechnen des Startsektors Fehler gemacht haben?
2) Hat die Partition etwa nur eine FAT?
3) Haben 20MB-Partitions bereits 1024 Byte-Sektoren?

Jeder Tip ist willkommen!
Bitte alles direkt per E-Mail schicken!!!
An: uli@biometrie.uni-koeln.de

Danke Leute!!!

There is a sequencer in the UK that allows you to play Replay type samples
along with a fairly good set of sequencing functions. It used to cost about
100GBP. There was either a cut down version or the real thing on a cover disk
a while back. I can't remember the name of the damned thing though. mail me at
ilaskey@cix.compulink.co.uk and I'll look it up.

Hmmm... make that 'a logician'. They don't need a strong imaginatin :-).

>HIDETREE
>prevents the object from being drawn, but not from being found by
>objc_find. At least that is the behavior on my system (TOS 1.0).

Ok, that may be on your system, but I'm 99.9% sure that on 1.2 and 1.4 HIDETREE
indeed prevents the object from being found by objc_find().
Oh, change 99.9 to 100 btw. :-)
In general when you hide an object you don't want to use it, right? So an
implementation of objc_find that would find hidden objects *would* be silly
imo. Not that Atari never did silly things, but still...

>Immanuel Kant was a real piss ant ... (If you don't know, don't ask :-).
>Sorry, I am in a silly mood, and I don't like Kant.

Me neither. Yet reading Kant in German is much better than reading Habermas
in German :-). And don't ask me who Habermas is, you don't want to know.

> (Address deleted).
Except that having used PageStream for some time, and having tried using the Falcon version, I'm not sure that I do want another version. I think it's time to switch to something else.

It may be worth noting that SoftLogik have said that the cost of producing the Atari version can not be met by upgrades alone, and that they would need to expect *new* sales in order to go ahead. So it looks pretty unlikely to me.

> There is no fix that I know of. SoftLogik isn't interested in fixing the
>bug either.
On the Falcon, PageStream 2.2b does not really recognise a screen config with more than 16 colours. If using 256 colour mode, all screen colours except the first one are set to black, and the `edit screen colours' option is grayed out.

In 16 colour mode, it works fine, including the `save as defaults' option.

I suspect that the reason that it does not work for > 16 colours is that the dialogue that edits the screen colours only has 16 boxes, and they couldn't be bothered to redo the dialogue. That would fit in with SoftLogik's approach quite well.

And, bitmaps are only displayed in mono regardless of your screen mode :-(

Specifically, I want to install file uncompressors to run
when I click on a compressed file... ie: lharc.ttp runs
with the argument -x on file foo.lzh when I click on foo.lzh..."

I do not recall exactly what I put in the install application dialog.
I do have something like you are looking for set up (notice the 'xh'
on the ARC.TTP line). Here is the 'installed applications' section of
my NEWDESK.INF:

#G 03 04 301 F:\FLASH160.PRG@ *.DO@ @
#P 03 04 305 F:\ARC\ARC.TTP@ *.ARC@ xh @
#G 03 04 302 D:\NEODESK3\NEOLOAD.PRG@ *.@ @
#G 03 04 20A E:\ARCHIVE\STZIP\STZIP.PRG@ *.ZIP@ @

The 'xh' was obviously typed in on the 'arguments' line of the "Install
Application" dialog, but I cannot recall if I typed anything else.
All I can be certain of is that it worked for me without problems.

Cyrille Dupuydauby said:

"By the way, there is a way for accessing the lost 2Mbytes !

YES, the blitter should have full access to this memory zone.
So you can use it for a RAMDISK or a cache disk, or even
directly with a MMU manager (a bit like virtual RAM, but with
real RAM)."

Back before the Falcon was released, I asked in one of Atari's online conferences if the "missing" two meg of RAM on a fully expanded Falcon could be accessed via the blitter. The answer was "No". It was mentioned in way of explanation that the blitter needed access to the I/O and ROMs that overlaid the 2meg space.

It is unfortunate Atari did not see fit to spend a bit more and add a software controlled hardware switch so that the blitter could be switched between the ROM/I/O space and the 2meg of RAM at will.

3136. Sparcles while booting

Source record: 192892

Hello.

I've got problems with by 1040 STF with a TOS 2.06-Card and a IMEX II memory expansion card. This has been working for a long time, but now, when I switch it on, there is the ATARI-Logo but on the right side of the screen, there are some sparcles. It looks like a small 'mirror-picture' of the Atari-Logo, because when the boot-text comes, there are more sparcles on the right side. And the Bott-Menu will never come.
While using the old TOS, the desktop will come, but never looks fine, because there is the same phenomena, as described above.

How can help me ?

Bye, Tichel.

>

??? Funny, the people at IBM haven't said anything about it. Since the 500
million dollar agreement was set up that IBM only got paid after the units
sold. (atari has only like 30 million in cash, probably half that now)

>>> Is now the time to buy?

If you don't have money to burn, stay out of the stock market. I know
its radical, but I count every dime of stock I have as a 100% loss.
So far I've made money off of everything but if it all falls apart, so
what, it was fun playing the game.

Yes, this was true for all game systems. However in the stores that I
have talked too, they are very excited on how well the Jag is doing.

>
>This hurts the Jaguar more than the CD32, at least initially. The Jaguar has

>

Thats true. But the Jag will get more titles before the CD 32 even shows up so
its probably going to be a fair fight.

>

Yes and everyone said the samething about dos 3 years ago, and 3 years
before that, it was the Commodore 64.. etc,etc..
Markets changes.

>people could give two hoots about what OS they are using. They are only
>concerned with compatability. And if the OS is too slow for their needs, they
>simply buy a faster machine. People will buy PowerPC based machines if they
>are marketed as systems that can run Windows based applications faster.

PPC are likely to run Windows slower since it'll be emulating it.
I think your assuming too much. Business wise, yes thats true, but in the
private sector, its a different ball game. In case you haven't noticed, most
Intel owners HATE windows. (even though they might have 3 or 4 copies)
Out of the 50 mill copies out there, only like 10 million are in use. Since
there are 100 million dos machines out there.. wonder what everone is using..

Hmm, not _exactly_ :-) The ST-RAM is not only not 16 bit wide (say 32),
but in fact - physically - 64 bit wide, because the shifter can/must read
8 bytes at a time. it's 'funnel'ed to 32 bit after the shifter, of course...

I am looking for the following files which were discussed in a recent
issue of AEO magazine (I think issue 3.1):

3dicons - some 3d icons
gram_140 - a grammar checker
qvfix1 - a utility (read: fix) by Atari for multitasking environments
runner - another DESKTOP replacement (not the game...I have found that)

I could not locate these via archie, so if anyone has these files or knows
where to get access to them, please let me know.

BTW: has anyone else noticed that not all the freeware/shareware listed in
"The unabashed Atariphile" is freely available.

BTWA: TOWERS is GREAT! Get it!

Ok, Towers is a great game, very much like Ultima Underworld but with clunkier controls and an almost intuitive interface, that is if you have played Underworld at all.

I am kinda stuck, however, on Level 2, just before going up to level 3. I walked a bit too far and fell off the ledge down below to where the shaggy warewolf/caveman thing was. I got the ring from there, but I don't know how to get back up. I spent maybe a total of 10 minutes looking at the problem, but maybe I missed something. I kinda thought that the ring would be a levitate ring and I would levitate out.

Also, does anyone know if the following controls are available (all ala Ultima Underworld - yes, I was spoiled with that game:)

Head tilt to see up/down? (would allow to see into pits and know if there are monsters down there before going)
Jumping
Mapping - to see where you have been and where you are (this is automatic in underworld, but you can only map where you have been)

Is there a way to determine the quality of the armor and weapons you are using? This would allow you to switch weapons as yours wears out...or is this an issue in Towers?

Any hints would be appreciated. Seeing how things are going, I will probably register this game when I get to the point where it makes me. I like it.

Thanks

New MACs have ROMs which require System 7. If you try to boot them up with
anything prior to that, they will refuse to run.

>indeed prevents the object from being found by objc_find().
>Oh, change 99.9 to 100 btw. :-)

May it's because I am a logician (and Dutch, for that matter) as well,
but my system can't find hidden objects either. As far as I know (make
that 80%), objc_find takes account of all properties of an object, including
flags like HIDDEN, but there are slight differences concerning borders
being noticed or not (I noticed a difference when using a prerelease of
MultiTOS).

>>that to be true...

I appologize for the inaccuracy in a response I posted to this
statement. HIDETREE does indeed keep objc_find from finding the
associated object.

I had made a programming error which was causing only part of the
object to be hidden. Again, sorry for the error.

Source record: 192808

In <CLBJoF.62z@bbc.co.uk>, John Derbyshire wrote:

> Does anybody know of a CD-ROM containing PD/Shareware files for ATARI st
> range of computers

Walnut Creek CDROM announces the release of the GEMini CDROM for Atari Computers. The CDROM contains 616 MB, and 2872 public domain programs, shareware programs and commercial demos for the Atari ST, TT, and Falcon Computers plus a section for the Portfolio palmtop computer. It also contains text and graphics for the Lynx and Jaguar video game systems.

The GEMini CDROM is set up in a logical tree structure which simpifies seaching for and running the programs. You can find files in areas such as accessories, archives, astronomy, database, fonts, games, GNU, programming, screeen savers, virus , text editors, utilities, etc.

It includes 50 megabytes of games and entertainment software. For the desktop publisher, it contains 15 megabytes of fonts. Many programs include source code. All programs may be run directly from the CDROM so there is no need to decompress onto the hard drive in order to use the files. Each directory contains an index and a list of files to make it easier for a user to locate a file.

The disc is set up for both Atari and MSDOS BBS's. All the noncompressed files have a corresponding compressed version in the zip folder, so BBS operators can easily make thousands of Atari files available to their users. BBS formats include PCBoard, Opus, Wildcat, RBBS, Spitfire, and Maximus.

For a specific list of the software on the CDROM, you can ftp the index.txt and readme.txt files from ftp.cdrom.com: /pub/cdrom/cdroms/atari.

The GEMini CDROM for Atari was edited by Eric Tremblay and Rene Guimont.

The price is $39.95. S&H is $5 for US/Canada/Mexico, and $10 for overseas. If you live in California, please add sales tax. You can pay by cash, check, money order or Visa/MC/Amex.

Walnut Creek CDROM
1547 Palos Verdes Mall, Suite 260
Walnut Creek, CA 94596

1 800 786-9907
1 510 674-0821 FAX

orders@cdrom.com

The disc is available for FREE to anyone that has contributed any of their own work. Just email me your name, address, and the name of the program(s)

that you wrote. Overseas addresses are ok.

Many of the programs on this disc are shareware, and require seperate payment
to the author for continued use. This CDROM is fully guaranteed, if you are
dissatisfied with this disc for any reason whatsoever, you can return it for
an exchange or refund.

Here is a list of other CDROM titles from Walnut Creek CDROM:

CICA Microsoft Windows CD-ROM - Windows PD/shareware from ftp.cica $29
Simtel MSDOS CDROM - MSDOS Shareware/PD from Simtel internet archive $29
Hobbes OS/2 CDROM - PD/Shareware from ftp-os2.cdrom.com $29
Giga-Games CDROM - Thousands of Games for MSDOS and MS Windows $39
GIFs Galore - Thousands of GIF images $39
Aminet Amiga CDROM - shareware & PD swr collection for Amiga $29
Garbo MSDOS/MAC CDROM - shareware & PD for DOS and Mac $29
Space and Astronomy CDROM - Nasa photos, doscs $39
Project Gutenberg CDROM - Hundreds of etexts, literature, documents $39
QRZ Ham Radio CDROM - Callsign database, shareware & PD, docs, etc. $29
Sprite CDROM - Sprite Research Operating System from UC Berkeley $29
Nova for NeXT CDROM - Software for NeXT (Motorola) Workstations $59
Nebula for NeXTSTEP (Intel) CDROM - Software for NeXTSTEP (Intel) $59
Source Code CD-ROM - Usenet source archives on CD-ROM $39
X11R5 and GNU CD-ROM - X11R5 Window System, Gnu Src, SPARC binaries $39
Ada CDROM -- Thousands of Ada documents and programs $39
Info-Mac CDROM -- 10000+ Mac programs from sumex-aim.stanford.edu $49
C User's Group Library CDROM - C source code $49
Libris Britannia - British shareware $69
Tookit for Linux CDROM - Linux Applications, Slackware distribution $39
FreeBSD Operating System CDROM - Complete 32 bit OS, X11R5, GNU $39
GEMini Atari CDROM - PD/Freeware for Atari $39
La Coleccion CDROM - Spanish PD/Freeware $39

CD-ROM Caddies $4.95

If you would like a more detailed list of other CDROM titles published by
Walnut Creek CDROM, you can ftp the latest list from ftp.cdrom.com
in the file /pub/cdrom/catalog, or send email to info@cdrom.com.

This is wrong. 3D0 hopes that it can cut the _manufacturing_ cost of the
system by 34% in the next few months. Panasonic is remaining firm on
their retail price of $699.00. Bad news for the 3D0, good news for the
newer systems.

GERMANY)

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions:
--------------------------------
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR] OR use the number address,
NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once. i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having to reply "y" for each
file
when asked "get {filename}?".
12) close [CR] to end (go back to ftp and
13) quit [CR] to go back to UNIX or.......
14 bye [CR] to end and go back to UNIX (or 'close' if you only want to quit the FTP site
you're
on for the moment)

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
```

- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs
were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate uncompress program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...)
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an
other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer.
i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

I recently played "Scorched Earth" on a friend's PC, and I thought to
myself "What an incredibly simple game!" But really, it wasn't that bad.
In the game, you use velocity, angle, and different projectile types to
destroy your enemy. I seem to remember a game on the ST like this
(called TOMATO?) in which you simply threw a tomatoe through an arc
in order to hit your opponent.
Is there an updated version for the ST/STe? If not, is the code for
the original available? Thanks!

Geez, I don't think you're giving Atari enough credit, Chris. I am not exactly thrilled with Atari's computer marketing (or lack of) as of lately, but they have been known to develope some incredible products for a good price. Even the Falcon, yes the Falcon, is a good value (of course, I am biased as I have one :)). Just look at the jaguar! People are amazed that Atari brought out that system for $250 (with the pack-in game) and are speculating that Atari must be losing money in hopes to make it up in software sales. When looking at the Jaguar chipset and the price of that machine, how can you say that Atari has no chance to release a decent Power PC?

Gee I pity you, may be its a good time to learn to read, and find out about TOS 1.04, there are over 2 pages of Fixes and new features, I have had tos 1.04 for a few years now, but I can never understand how any one can use any thing less than TOS 1.04....

Its like having a all new ST...???

There is a lot of software that will not work with any thing less than TOS 1.04..

You can use any standard floppy drive on the ST, including 1.44MB HD drives (though without the high density clock upgrade you'll only be able to format low density 720k-920k extended) Buying any 720k PC floppy drive should work just fine; pop open the ST, remove the old mech and plug in the new one.

Actually, I looked up there but could not find the sources (probably
expired...[sigh]). I looked through all of the source ftp sites, and either
they didn't have "source" in the description, or the site didn't have the new
szrz sources (I found an old zmodem from 90 or 91). Has someone already
obtained those sources? If so, from where (preferably in the States, but if I
have to get it transcontinental ... I will but only as a last resort)?

>>
>> Anyone got the executable(s)?

Well, I wanted to compile and then mess around with the code as part
of a project for my networking class. If I get the sources, I'll see if I can
get it to compile (before I hack it up) and if I can, I'll post the binaries.
Deal? But I need the sources first ....

>
>Well, you could just forward this information to you sysadmin, with a

This may not be quite true. In addtion to physical problems (Atari used 1/3 height floppies, and many had the nifty trapezoidal buttons), there is also the media check problem. In a nutshell, many floppy mechs will not drop into an ST and work properly, due to the screwy way STs check for media change. Now, this information may be affected by TOS upgrades (i.e. newer TOS's might not have this problem, I'm not sure).

There is a text file called "ibmflopy.lzh", or something similar that I uploaded to atari.archive.umich.edu that has some info about this. One drive mech that seems to have a lot of success in STs is the TEAC 720k unit. I believe Toad (and others) sell these. You can get even the problem drives to work correctly, but it requires some hardware hacking (to my understanding).

Also, I have heard that using a high density drive (as a low density unit) can cause some game compatibility problems (those using certain copy protection techniques).

Gribnif is very active on Genie if you don't get an answer here.
There are several sections for the different products they sell. You can
also call them. It might be better to ask your question rather than just
ask for a reply to a message that has no subject.

There is a German mono game called Baller that sounds like it will
interest you. It is quite old, but very good. It should be on good
ftp sites all over :-).

3173. Graham Gooch World Class Cricket

Newsgroup: comp.sys.atari.st
Date: 1994-02-16 23:15:01 UTC
From: pmh@noddy.forestry.tas.gov.au
Message-ID: <pmh.13.000A4068@noddy.forestry.tas.gov.au>
Source record: 192830

Has anyone encountered a problem with Graham Gooch World Class Cricket where during a game the program enters a phase of asking for a diskette for a bug error report, formats the disk and proceeds to create a file named "Image.Bin". The ST then freezes and requires reboot and of course you loose the game, can be annoying, the Aussies had England 2 for 2 last night.

My advice is to split it up into (say) 6 100Mb partitions. Its much safer
that way.

Also I don't think the MetaDos drivers will help you. A CD-ROM is not a
harddisk and thats why the Metados drivers are needed. I can't see them
thinking much of a harddisk ;-)

>Can anyone explain why gcc needs so much memory and other c-compilers don't..

Because it was written for the UNIX OS (traditionally) under which you have stacks of memory - and when you run out of that you start using virtual memory on the harddisk.

Its also entirely in C which obviously isn't as small as assembly. Also GCC produces fast, but fairly large code which shows as it tends to be used to compile itself.

Roland.

: >> works?

: >Not likely. Atari will never release another computer, in my opinion.
: >If they had brains, they'd skip the '040 and design a computer around
: >the new PowerPC 603 chip.
!!! Just a question here ??? Why the 603 and not the 601 ??? The 603 is
no improvement for a DESKTOP computer over the 601 !!! The major
difference in the 603 is the ability to shutdown parts of the chip
not currently being used and as such save power. The delay wait for
this chip would not be necessary on a DESKTOP as the 601 is already
a very efficient chip it only uses 1/3 the power of a 586 INTEL.
There are other member of the PowerPC family that might be of
interest at a later date like the 620, but for now do delat ATARI
as soon as the PowerPC 601 is shipping in volumes to get a $250-300
price per chip start building. Oppps didnt ATARI have plans for UNIX
well sounds like PowerOPEN for the PowerPC is just that !!!
I will now surrender my soapbox and quit preaching < GRIN >

: As surprising as this may seem to you, there are a number of Atari folk
: who share this opinion. Still, I doubt we'll see anything come of it until
: the Jaguar stuff is rolling....

Actually, it depends on what you mean by 'freely'... Michael does say that he gets the files from GEnie, DELPHI, the CodeHeadquarters BBS and several other boards. Whether the files make it to an ftp site is more a reflection on the users of the Internet than anything else. I know if I understood how to PUT files better, via a dialup link to an Internet gateway, I'd have several files to upload. Most Atari telecomm users just haven't gotten Internet literate yet...

>and are free ;)
>> Michael Steve jr.
> The Sequel

Well there is only one and that is CHECKDISK3, you will find this on many
FTP Sites, its by Atari and its claimed that its not PD...

I have used it many many times, I don't know if it can handly BGM Partitions,
but I never had problems with it on normal ones at all..

But first you must run a Util like ICD's CleanUp or you can end up stuffing
up your hard disk...

STZip is very good, its fully GEM'd but has the ability to use a command line too.

There are plenty of Unarc's out there, although arc is now very much out of use. Zip seems to be the most popular archive format, with zoo and lharc being the others often found.

Using -O over no optimisation will certainly make it smaller, but -O2
might actually make it larger (depending on how many functions are
inlined and other arcane stuff like that)... For example, my POV-Ray
2.2 executable is ~1k smaller with -O than with -O2.

I'll get used to usenet sometime........

It is very unlikely that a CD-ROM driver will include any code to write to
the hard drive as CDs are read only. also CDROM drives have extra commands not
supported by the hard drive. I find that the best partition size is about 100Meg
you are very unlikely to create 100Meg samples and From experience I found that
Having 14 Partitions is a bit confusing. 6 is a happy medium. It is also useful
to have 6 partitions if you are transferring software from one drive to another
I had two 340Meg hard drives connected to my ST at once with 6 partitions on
each and backed up one of them onto the other with very little effort. To do
this with my previous 14 Partition setup would have involved turning off most of
the partitions on the first drive to access the partitions in the second drive.
The first drive has to be <16Meg as GEM doesnt like 100 Meg Boot partitions.
However after that anything goes.............. up to a point

The main advantage of checkdisk3 is that it can handle any kind of TOS
filesystem. It will even work correctly with sectorsizes/clustersizes that
are not supported by gemdos. Though I'm not sure if it can handle a TOS
filesystem with only one FAT.

: > the original available? Thanks!

I have written a tank game thats a lot simpler than scortched earth but just
as playable. However its still not quite finished ie. I havent written the
instructions and probably never will but ive you want, I could try to post
it on comp.binaries.atari.st with an instruction file that says

cursor keys:
left/right change angle
up/down change power
ins/clrhome move tank

Let me know if you want me to post the program or if you have any other
suggestions (bear in mind im LAZY) on where to put it.

Yours

Dodo

Ps - this game is 100% machine code and some of its nasty. It WONT run on a
FALCON TT MEGA ST. but if it does - drop me a line - two bombs or mucked up
screen signify the fact it didnt work!

There's at least the Walnut Creek "Gemini CDROM for Atari" which
was recently released (I bought a copy - I need to get a CDROM drive
though to check it out :-).

Check the file "gemcdrom.lzh" (that should be the filename) on
atari.archive.umich.edu - it's a description of the CDROM, how to
get it, and I think includes an file index/directory of the disc...

Oh happy happy joy joy!

Now I find that my wife agrees to spend part of my bonus on a new printer - I like the bubblejets from Canon (they seem to do well from a print standpoint).

I use WordPerfect and WordUp! for WP, and I have FleetStreet for publishing. Any ideas where I can get fonts and drivers to satisfy these puppies?

Email is fine - if there is something in a FAQ, a pointer to the archive would be useful also.

Thanks and have fun! - Bob

Yes, they HAVE been known to do this. But that's past tense.

>Even the Falcon, yes the Falcon, is a good value (of course, I am biased
>as I have one :)).

Well, I have one too. But that doesn't blind me to what's going on in
the marketplace. In an age where 486DX2-66 boxes routinely sell for
$1500 and Apple sells 68040 powered Macs for under a grand, the Falcon's
price performance ratio takes a hit, IMHO. Hey, it's still a great
machine but it's NOT the unbelievable bargain the 1040ST was long ago.

>Just look at the jaguar! People are amazed that Atari brought out that
>system for $250 (with the pack-in game) and are speculating that Atari
>must be losing money in hopes to make it up in software sales.

Quite honestly, Scott, I'm SICK of hearing about the Jaguar. It's a great
game machine, alright, but that doesn't mean diddly to me as an Atari
computer owner/user. And I hope you don't belong to that camp of deluded
souls who believe that good Jaguar sales = new & improved Atari computers.

>When looking at the Jaguar chipset and the price of that machine, how
>can you say that Atari has no chance to release a decent Power PC?
>-scott tirrell

Atari's ability to _develop_ a PPC based machine is a heck of a lot
different from actually _marketing_ one successfully.

The betting office is now open for those who think otherwise. ;-)

> >8 bytes at a time. it's 'funnel'ed to 32 bit after the shifter, of course...
> >

In fact, if I remember my schematics correctly, the ST RAM is 64 bits wide, and it is connected to 2 funnel chips which then connect to both the '030's data bus and the shifter. The connection to the '030 is 32 bits wide, but the connection to the shifter is only 16 bits wide. There is also a 16 bit connection to the high-speed ECL shift register which produces the video output in TT High.

>
> Sound FX: devouring humble pie :-)

> --Chris
>
> X.400: g=chris;s=ridd;o=nhs imc;ou1=cosit;a=attmail;p=nhs imc;c=gb
> Cix: chrisridd@cix

The ST RAM is accessed in 250ns read/write cycles , so every 500ns, the shifter gets 64 bits of data and the '030 can get 32 bits if it want's to.This gives ST RAM a bandwidth of 8Mb/s to the '030 (2M accesses*4 bytes per access) and 16Mb/s to the shifter.

TT RAM is 32 bits wide, only available to the '030 and the 32 bit DMA devices (Appletalk/Fast serial and SCSI) and is synced to a 16MHz clock. TT RAM, unlike ST RAM is also capable of burst mode access.

I don't have any firm figures for the speed of TT RAM, but I will do my best to guesstimate it a bit further on . Before I do however, I had better just say that TT RAM _feels_ about 1.6 times as fast as ST RAM e.g. a program that took 16 seconds to compile in ST RAM only took 10 seconds to compile when I ran the compiler in TT RAM.

Back to the speed of TT RAM - TT RAM is synchronous when doing burst mode access, so it has to be accessed either at the CPU clock speed or at some submultiple

of it. TT RAM only has a 16MHz clock signal to play with, so all the accesses have to be in multiples of 60ns. The RAM on my (ridiculously overpriced) GE-Soft TT-RAM Board is 70ns stuff, though 80ns RAM would probably work as well. 80ns DRAM needs about 180ns to do a read/write cycle, though it can do a page cycle in about 60ns. Therefore to do a 4 long-word burst read takes 1 slow and 3 fast accesses or about 180+3*60=360ns. This gives real TT RAM a maximum bandwidth of 42Mb/s during READS and 21Mb/s during writes which are not burstable.

I really think that it is a real shame that the TT's (relatively) speedy 32MHz 68030 is let down by such poor memory performance. ST RAM is very very slow ,1 access every 500ns is equivalent to about 15 wait states, and it needn't be. If ST RAM used page-mode and used 2-cycle 64 bit wide bursts, both the shifter and the CPU would be able to get upto 31Mb/s out of it (180ns+60ns for CPU + 180+60ns for shifter => 4*8 bytes in 480ns => 63.6Mb/s in total),giving the 030 semi-decent access and allowing video modes such as 800x600 in 256 colours , 1024x768 in 16 colours and 320x480 in 65536 or 16.8M colours all at 60Hz non-interlaced. If ST RAM were real VRAM and used a similar 2-cycle 64 bit burst for the CPU, things would have even better, though more expensive.

TT RAM should have been provided with a 32MHz clock and should have had SIMM sockets and a _FAST_ DRAM controller on the motherboard - Atari could have used one of the standard DRAM controllers found on PC-clone boards which provide both page-mode and interleaved access to DRAM , and thus produce the highest possible throughput for a given type and speed of DRAM.

Finally I really think that the TT should have had a secondary cache available, at least as an option, as this would really have sped it up.

Despite all these moans, I really do love my TT, and I am not even remotely tempted to swap it for a much cheaper 486 clone, but I do think that if the TT hadn't started life as a 16MHz '030 machine, but had been properly designed to run at 32MHz, it would have been a much,much better machine than it is today, and Atari really would have given us Power Without the Price !

If any other TT owners/lovers out there feel the same about the speed of their TT's (or lack thereof) , and have a reasonably good knowledge of electronics, perhaps it might be an idea to start a discussion about _cheaply_ acclerating TT's in comp.sys.atari.st.tech, which is probably where this over-technical post belongs (no flames please :-) !!!!!

Bye for now,
Cheers,Joe.

>why anyone would want it. If I were to buy a new Mac out of the box I'd
>take System 7 off and put 6 on, first thing (just my opinion...).

First of all, you don't have a choice with the newer Macs... they won't run
on anything but System 7.1 or later.

Secondly, like the vast majority of folks who use a Mac on a daily basis, I for
one would not want to go back to Sys 6.x. Running System 7 on a slow 68000 or
020 _is_ painful due to it's RAM requirements and sluggishness. But on any
reasonable 030 or 040 machine, it's a moot point.

Back to the GCR... I wouldn't bet on EVER seeing a Color Spectre GCR. 'nuff said.

First of all if I am posting this ad. in an inappropriate news group then please excuse me for this posting. These drives have been sitting without any use since the time I bought them and I thought, someone with an atari might find a use for them.

Both the drives are in a single 3-1/2" metal enclosure. The metal case has some additional electronics and there are two DB25 female connectors outside the box, plus a jack for external adapter. I used one of the drives for testing (only for a few hours) on my PC (last year). The drives are made by either Mitsubishi or Toshiba (I don't remember). If you are interested, send me an email.

Thanks.

drives.

3218. CV-Translator v3.0beta

Newsgroup: comp.sys.atari.st
Date: 1994-02-17 17:09:18 UTC
From: NT253B02@MARS.SENECAC.ON.CA
Message-ID: <1994Feb17.120919.105@venus.senecac.on.ca>
Source record: 192675

Let's getting something straight:

German-ToEnglish was free!
It was suppose to work only on a 1040ST in medium/high resolution.
If you run it at any other resolution it would crash because
it assumed the screen was 32000 bytes.
I personally tested it on:
486DX33 [Gemulator, ACE'92 show] Worked, some speed as 1040ST.
TT [ACE'92 show] Worked, 2.5x the speed as a 1040ST [STRAM ?]
Falcon [ACE'92 show] Worked, some redraw problems because
MultiTOS was also running.
MegaSTE [ACE'92 show] Crashed right away!

Now, there's a new program that is called CV-Translator that
is suppose to work on every machine. I've tested it so far
on a 1040ST and TT [I need more beta testers, if you'ld like
to test the program, send me a message.] and it works.
The program grabs 600KB of memory for itself at the beginning
and leaves all the other memory alone, so you can run more
programs. It only uses VDI to write to the screen. No more
direct writes to writes to the screen.

I hope this clarifies it.

Yes, that's correct.. I am no longer with Atari and I haven't been since
March 1993.

You might try contacting Eric Smith, Bob Brodie, or Bill Rehbock for
information on
TOS patches. I am not really up to date on what patches are useful with
the newest
version of TOS.

3220. Trouble with MiNT, Minix fs, bash, gcc, emacs on 1040ST

Newsgroup: comp.sys.atari.st
Date: 1994-02-17 17:55:31 UTC
From: perbandt@sv5.mch.sni.de
Message-ID: <PERBANDT.94Feb17185531@sv5.mch.sni.de>
Source record: 192677

Hi there,

after fighting several weeks to get a UN*X like environment running on
my ATARI and having not much success now I send this call for help to
all MiNT, Minix fs .. wizards.

My equipment/environment:
1040STFM running TOS 1.4 (purchased in 1991), 4MB memory, 105 MB hd. I
have installed MiNT 0.95 and lots of stuff from the MiNT Distribution
Kit (MDK). Partition E: is configured as a minix fs partition. The
system is booted from partition C: which is a TOS partition. I let GEM
start upon installation of MiNT and work from inside TOSWIN windows
where I use the bash shell (sorry, don't know exactly which version -
was inlcuded in MDK).

My problems:
The bash does not execute the startup file .bashrc located in my home
directory. The $HOME environment variable is properly set (was done in
the C:\MINT\MINT.CNF file. "echo $HOME" yields a proper value.
Furthermore bash does not recognize the executables located along the $PATH.
$PATH is initialized to \bin in C:\MINT\MINT.CNF. I change its value
to something like "/bin:/usr/bin:/usr/local/bin:/usr/local/emacs/etc"
(maybe not all these directory are physically existent this time) but
no one of the executables spread over those directories is recognized.
Currently the only way to execute a program is to type its absolute path.
The tilde-character "~" is not properly initialized. My $HOME is
/usr/users/ad and "~/file" expands to something like "/usrusersad/file".

Entering "pwd" I get a response like "e:/bin" instead of "/bin" what I
expected.

I'm not able to copy files from a floppy-disk drive to a place on my
hd from within the shell (bash). The source file is not found. Copying
by means of drag and drop on the GEM layer works.

Already tried tcsh. But this shell complains about an unknown
terminal "tw52" at startup and doesn't read any personalization file too.

The jove editor bundled with the MDK is unable to store a file under a
new name. Seems as if he didn't see the destination in the file system.

The gcc2.2.2 crashes during preprocessing a simple "hello world"
program (have already downloaded gcc 2.5.8 but not tried yet).

I tried to setup emacs. Version 18.57 dumps properly but crashes upon
invocation with an assertion regarding a "heapbase" or so. Version
18.59 aborts during the first dump pass after loading some of the lisp

files with "Pure lisp storage exhausted".

All that together is really frustrating, isn't it?

Any help???

Adalbert.

>

Wrong!

TOS stands for The Operating System. If you ask any Tramiel, they will
tell you that
the T standards for "The", not "Tramiel"

GEM was designed and produced by Digital Research, makers of DR DOS.
DIgital Research
was purchased by Novell a couple of years ago.

I've seen several "Steve Taylor"s on the net; the one being quoted is
a singer/songwriter who I don't remember seeing on the net yet.

Several very good albums; latest is "Squint". "I Predict 1990" is my
personal favorite. Followups directed to the appropriate group.

>of lately, but they have been known to develope some incredible
>products for a good price.

Chris has a lot of complaints, but he has done some software
(at least ports of via GCC, I believe) and for this he's helping us overall.
Besides, he's still using his Atari, so who knows? (love-hate
relationship with Atari, maybe? :-)

As for Atari's marketing prowess of the ST computers, I'm not sure
"lately" quite covers it :-) (but I still have my MSTe and love using it)...

>looking at the Jaguar chipset and the price of that machine, how can
>you say that Atari has no chance to release a decent Power PC?

Don't forget - the Jag's chipset was built IN-HOUSE so they're not
paying others for the chips. Buying Power-PC's they'd have to pay enough
for the makers to make a profit, thus driving up the prices.
Either way, I'd love to see it though!

Rob

...BTW Bob Brodie uploaded some screen shots of "Tempest 2000" for the
Jaguar up on GEnie recently - I'll try kicking them up to
atari.archive.umich.edu for the curious, probably in both GIF and
JPG formats (the originals were in TGA format, but it seems a waste
to download 150k of two pictures when half of that will suffice, and
still looks as good as the originals (IMHO))...

3228. Shadow question (dl multitasking)

Newsgroup: comp.sys.atari.st

From: dwallace@wam.umd.edu
Message-ID: <2k0gq1$1fb@cville-srv.wam.umd.edu>
Source record: 192685

Several years ago, I picked up a copy of Double Click's "Shadow", which lets you do background file transfers. At the time, I didn't get much use out of it, as I had a 512k Atari ST at the time, and it was only of use when autodialing in the background.
I recently upgraded my STe to four megs, and the other day, I stumbled across the disk with Shadow on it, realizing I could get some use out of the thing at last! However, my search through the boxes in my basement was unsuccessful in digging up the documentation for the thing. The program is currently set up for a 100k buffer, which isn't much use, and I can't figure out what I'm supposed to do with the SHADOW.INF file to allocate more buffer space.
Email replies would be most appreciated... Thanks.

] Does anybody have any hints about making PageStream v2.2 work in color
] on an F030? Every time I run the program, it sets ALL the color reg-
] isters to black. Setting the X-Control Panel via the Color CPX does
] changes things (temporarily) but I've had no luck on either TOS 4.02
] or 4.04 machines.

Try deleting the PGSTREAM.INF file (Or whatever it's name is). If you
used it on an ST, it's probably trying to set all the colors to the
ST equivalents, and getting somewhat confused! Apparently it _does_
work quite happily in the overscan 640*200*256 mode, no-one locally has
been able to try it in the 640*480*256 mode!

3233. EagleSonic 32MHz kit for Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-02-17 21:15:38 UTC
From: molin@cxc1.cl.msu.edu
Message-ID: <2k0mpq$24p@cxc1.cl.msu.edu>
Source record: 192690

Has anybody had any better luck than I did installing the EagleSonic 32 accelerator in a Falcon? The computer in question is a 14Mb TOS 4.04 machine that works just fine in the 16MHz mode, but locks up when the 32MHz program launches. There seems to be no problem with installation, as the startup memory test runs to completion, hence I am presuming the problem lies in a faulty disk. (The 32MHZ.PRG file has a time stamp of 00-00-80 05:49am, which was my first clue.)

Is there a U.S. or Canadian phone # for GE-Soft? The paperwork included with the kit gives a German number. Also, what chance is there of GE-Soft having an internet e-mail address? (Slim to none, I suppose.)

The problem with moving all st.games to atari.games is it's already pointless enough. I have a jaguar and develop for it. But the number of rediculous advocacy arguments and junk about 2600's has led me to stop reading it.

I am interested in new ST/Falcon/TT games, I could care less about how 500 different people interpret the latest remarks from Brodie or Rehbok. I have to do enough of that on a personal basis.

So I am for a comp.sys.atari.st.games or possibly a comp.sys.atari.030 group. The second being primarily a place to discuss software that won't under any stretch of the imagination run on a stock ST. It would be nice to have some bandwidth to discuss TT/Falcon topics without having to deal with flame messages from people who don't plan to buy one.

Let me relate my experiences with your programs, Carlos...

I tried GER2EN30 on my 1040 STFM a few months ago, and it worked OK until it had read the dictionaries, then it crashed the machine - I can't remember how many bombs.

I tried it on a friend's Falcon, and was amazed at the results. It translated German text into _readable_ English, and left all the untranslated German highlighted in red.

Hence, I assumed that the '30' in GER2EN30 meant that it only fan on the Falcon030.

I recently downloaded CV Translator, version 1.something, and ran it on a German Text. The program ran successfully (in ST High) and produced a text in which less than 30% was actually translated. I think this was due to the disabled dictionaries in the unregistered version.

I have downloaded CV Translator V 2.0 recently, and I have not got around to trying it yet.

Steve Taylor.

You should install both FPATCH2 and BMAPFIX2 in your AUTO folder in that order.
(Unless your application has some built in fix for this, in that case I don't
know.)

Get a copy of gcc/gas/ld/make that is linked with the MiNT-Lib. Binaries
linked with the GNU-Lib have problems with long filenames if you don't
set UNIXMODE to a right value. Use 'strings', 'what' oder 'ident' to
find out, what library was used.

If I get I binary that is linked with the GNU-Lib, the first thing I
do is recompiling and linking with MiNT-Lib.

: Hmmm... There might be a 2.4.x or 2.3.x version in the MiNT
: Distribution Kit but most FTP sites are all current with 2.5.8 and they
: don't keep any older versions.

As I remember, on ftp.uni-paderborn.de is a copy of gcc 2.3.3 (MiNT-Lib)
that works really fine. I think that is the best gcc you can get today
for your ATARI. You are able to compile MiNT 1.09 on a 2.5 Meg ST!

Indeed. A little more Atari related chat over in r.g.v.atari wouldn't hurt since it's currently mainly infested by those annoying Nintendo/Amiga/3do/younameit advocates and the obligatory bunch of Atari bashers looking for cheap shots to boost their low life egos.

Maybe they're not looking to compete with the clone makers. They could build on the Jaguar/Falcon concept with great arcade quality games, exciting new multimedia applications and pro tools for the music people.

If you insist on knocking Atari, then at least get your numbers straight before posting false information.

> paid for the R&D Atari had to lay out.

Even if Atari can't match the price of mass market clones, they could still manage to grab a goodly share of the much neglected home market. All it would take is some nifty design and marketing and they could be back in business in no time. I think it would be a great pity to have a monopolized market entirely dominated by IBM and Apple, as their computers are mainly intended for pro users and not very suitable for home and hobby users imo.

3244. Falcon Blitter Speeds

Newsgroup: comp.sys.atari.st
Date: 1994-02-17 23:51:56 UTC
From: jeff@jupiter.ame.Arizona.EDU
Message-ID: <2k0vus$p7v@auggie.CCIT.Arizona.EDU>
Source record: 192701

This is a slightly delayed response to the many articles concerning the use of the blitter chip and the effects of bus arbitration with the video chip. As an empirical example of how system throughput decreases as visual screen memory increases, I ran the Blitter on 128x128 pixel sprites at different resolutions to compare overall blitting speed.

Note that normally, as you increase the size in memory of a single BLIT, you observe an INCREASE in Blitting speed (mem/sec) because of the logic involved in blitting the horizontal edges of the sprite. So Blit mem/sec is actually lower for smaller sprites. So here's my results (I only tried standard modes)

Old ST modes:

colors|xpix|ypix|Mbytes/sec|Mpixels/sec
16| 320| 200| 2.460 | 4.920 <= mem/sec winner
4| 640| 200| 2.276 | 9.102
2| 640| 400| 2.028 | 16.222 <= pix/sec winner

VGA-low -> 320 x 240:
cols|Mbytes/sec|Mpixels/sec
4| 2.301 | 9.264
16| 2.402 | 4.805
256| 2.293 | 2.254

VGA-high -> 640 x 480:
cols|Mbytes/sec|Mpixels/sec
2| 2.008 | 16.063
4| 2.226 | 8.904
16| 2.167 | 4.334
256| 1.771 | 1.771 <= Eek!

XGA-high -> 1280x960:
cols|Mbytes/sec|Mpixels/sec
2| 1.914 | 15.312 <= Double Eek!
4| 1.979 | 7.915
16| 1.665 | 3.330 <= Worst Mem/sec

Soft BLIT: 65536 col, 320x480: 1.65 MB/sec, 0.829 MPix/sec

Comparison... My STe gets about 1.6 Mbyte/sec on an 8MHz Blitter. So something must be slowing down the Falcon's blitter by 25% just to begin with.

So... What, you may ask, is the point, other than I have FAR too much time on my hands and was obviously bored?

Well.... it shows that Bus Contention IS a factor, but very minor: When visible screen memory went from 32K to 614K, nearly a 20 fold increase in bus needs,

Blitter throughput dropped less than 30%. This is more than acceptable to me
for the benefit of having a 12 Meg screen hardware scrolling about.

It shows that the blitter appears to be active in 256 color mode.

It shows that the Falcon DOES need a blitter chip, but that a 32 bit 32 MHz TT
has no use for even a 32 MHz blitter unless it can use the full bus.

It shows that you're in BIG trouble trying to animate in 640x480x256.

Also, if you noticed the strange upsets in which speed increased with screen memory,
that's because there was the slight effect that the monitor's scan rate was also
varying between 60 and 90 Hz. This was not a major factor in the highly qualitative
pseudo-scientific experiment, and I didn't want to bore you with any more details.

The consolation news is that you can at least intelligent blit 78 screens/second
in the old ST modes.

(For Simple Blitting. i.e. sprites at word boundaries such that you are actually
doing memory copying, such as whole screen copies, add about 50% to the above figures.)

Chow!
Jeff
P.S> compare with 15Mpix/Sec of top of the line IBM graphics cards & 850 MPix/sec at
24 bit color of a certain game machine.

>if you do a "clean boot" or a normal boot ... I've even tried 1024*768*256 to
>no avail ....

You had more luck than I did at first with that program:
It told me that it could only run on a Falcon!

The problem was that it only checked for TOS version 4.04 and I have 4.01.
When I had that fixed, I got the message you mention instead. :-(

Once again the failure was caused by some bad checking code, this time of value
returned by Set_mode. I had the TV mode set for PAL, but it only accepted NTSC.
A bit strange to check for that in a program that only runs in VGA mode!

If you correct those two checks the game runs as it should. It's probably
enough to change the video mode with a suitable CPX.
IMHO it wasn't worth the trouble.

From: warwick@cs.uq.oz.au
Message-ID: <2k1641$o3v@uqcspe.cs.uq.oz.au>
Source record: 192705

ipoorten@cs.vu.nl (Ivo van Poorten) writes:

>Can anyone explain why gcc needs so much memory and other c-compilers don't...

1. GCC is written to support ANY CPU. The CPU is simply (!) described
in a `machine description'. Everything else is generic.

2. GCC produces very good code.

These two factors cost both memory and cputime. So GCC is a slow memory-hog
that produces exellent code and is ported to just about any machine.

Other compilers, such as Lattice or HSC or whatever are designed with a
single cpu in mind (the 68000, and maybe also 68030). Because of this,
there must be many many shortcuts that can be taken. For example, GCC
runs the source through a preprocessor then stores the result in a file;
it them runs the compiler on that file to produces another file of assembler
code; it then runs that assembler code through an assembler. Other compilers
will often do it all in one program. But that's just not realistic for
a compiler that has to work on many different machines - some of those
machines require that you use their special assembler to assemble the
output of gcc.

3250. MultiTOS first impressions

Newsgroup: comp.sys.atari.st
Date: 1994-02-18 01:42:45 UTC
From: warwick@cs.uq.oz.au
Message-ID: <2k16el$o92@uqcspe.cs.uq.oz.au>
Source record: 192707

I suppose I'm late to the club, but I have to say that all the complaints
I've heard in the past about MultiTOS are unfounded.

Slow? Not at all. It's slow on an ST without a screen accelerator (and
warp-9 doesn't work with multi-tos). But on a TT, is fantastic. And it's
a great way to get AES 4.

Questions:

1. How do I `run' desk accessories after mtos has booted?
2. Are there any colour icon editors?

Source record: 192710

Hi,

I managed to install the ka9q package. I do have some additional questions.

1. The software doesn't seem to support any other terminal than vt52. I'd
like to have a vt100 terminal emulation. Is there a way to do this?
2. It seems that I can only make a slip-connection when I make connection
with a normal comm.program. I'd like to be able to set up the connection
with a dial-up script.
Can anybody tell me if and how this is done?
3. When I have the slip-connection, the letters I type don't allways come
through. OK, I'm not the fastet typist in the world, but I'm not that slow
either. How can I speed it up?

Any reply via email is welcome, since I don't read this group that often.

4.02
> or 4.04 machines.

I have that problem with 2.2 aswell ....set's all the colour's past 2 as black
and Despite numerous attempt's to chance the default it resett's
those
colour's as default. Does it also retrun the black color's when you exit to
the desk (From a proper set up color PGS) ? I have also found that the screen
color mapping is pretty strange as well .

I think it may be a bug in 2.2 since 2.1 worked OKay.

About the question for an RTF importer/exporter for the ST, a pretty good little word-processor that will handle RTF's has just appeared in

atari/Applications/Wordproc/

on

atari.archive.umich.edu

filename: marcel22.lzh

It's a fairly full featured word-processor, even comes complete with a pretty comprehensive dictionary, it's a bit on the slow side, (but most stuff is on my STE without NVDI 'cos I'm too poor to afford it 8-), but very usable! (No slower than 1st Word+ which is still the word processor I use the most often because it's so quick & simple to use with my cheapo 9-pin dot matrix).

The file is about 270K from memory, and the complete installation takes up about 700K. It even supports printing to Post-Script printers and the atari laser-printer!

/list
FTL sold thier rights to their Dungeonmaster series last year. Look back
to last fall's issue of Atari Explorer on-line. I believe it was
mentioned in the Atari Asylum column. A new company now is developing
Dungeonmaster III for the PC. Darn!

How about a replacement Eklipse model which tracks at 300dpi. Performs
much better than Atari's. The price is $34.00 Canadian dollars.

Let me know if you would like to order.

tfork works just fine... I guess you could consider them threads, although
they really are full-blown processes. They get their own basepage, but just
execute in the same code and data space as their parent. You definitely need
to be careful about library routines like malloc, though...

Hi!

Vincet Lefevre has mailed me the following (he has troubles with his news-reader...):

----------CUT----------

From: Vincent.Lefevre@ens.ens-lyon.fr (Vincent Lefevre)

I've found the bug (thanks to ADEBUG :-).

At the address $4AB0 of the TEXT segment, you have to write $4E71 (just after 00 1B), which corresponds to a NOP instruction, to cancel the check.

Explanations:
At the address $4AAC, one has "CMPI.W #$1B,D7", where D7 contains the graphic mode. And at the address $4AB0, one has a BNE... i.e. if the graphic mode isn't $1B, the game doesn't start. But I think that with many monitors, the graphic mode is $3B (PAL flag = 1); so it doesn't work.

Vincent Lefevre

----------CUT----------

I still haven't checked this out, but I will do soon... ;-)

Ciao, Heiko.

Yup, I've had this problem time and time again. It's ruined many a
game, especially when I've been winning. It seems to happen when a
full pitched delivery beats both bat and leg stump. The ball bounces
a couple of times, and up comes the bug error message. I've been
meaning to complain to Audiogenic for months, but haven't got round
to it!!!

Apart from that it's excellent.

Atari should split up its operations if it decides to continue selling computers. The main problem why the more "professional" computers (TT) did not sell was the "games image" Atari tried to shake. I believe that if a PPC based computer is released by Atari then it should be handled by a sub-division of the company. I know there are those who say Atari is far too small to be split. What I mean by split is a different name for the computers. Take away the name Atari and call them something else so people do not link it with the "games image". A similar split to IBM's Ambra computer range could be made.

Hallo,

ich hatte mir vor ca. 1 1/2 Jahren auch einmal das MDK geholt und einige
Probleme damit gehabt. Ich hab mir damals dann Stueck um Stueck die Tools
durch neuere Gnu-Utilities ersetzt. Ich weiss nicht, welche MDK-Version Du
hast und in welchem Tempo Simon die MDK auf den neuesten Stand bringt. Es liegt
aber nicht allein an Simon; z.B. darf Mint ab Version 0.96(?) nicht mehr als
Binary, sondern nur noch als Source weitergegeben werden. Daher die veraltete
Version 0.95 im MDK. Aktuell ist 1.09, es kommt wohl bald 1.10. Die Version
von BAsh sollte eigentlich mit 'help' rauszufinden sein. Ich habe auf ftp-
Servern bisher keinen Bash-Port gefunden, der mir voll zugesagt haette. Ent-
weder war der Portierer uebereifrig (alle Filenamen werden automatisch
auf 8.3 gekuerzt und grossgeschrieben) oder bewegte sich nach meinem Geschmack
zu weit von TOS weg (sucht nicht mehr nach 'ls.ttp', sondern nur noch nach 'ls')

> My problems:
> directory. The $HOME environment variable is properly set (was done in
> the C:\MINT\MINT.CNF file. "echo $HOME" yields a proper value.
> Furthermore bash does not recognize the executables located along the $PATH.

hast Du Dir mal mit Cntr Alt F1 angeschaut, nach welchen Files wo gesucht
wird? Ich habe auch manchmal Probleme mit den symbolischen Links, wenn
ich gleichzeitig oder nacheinander auf d:/bin, u:/bin und/oder /bin zugreife.

> The tilde-character "~" is not properly initialized. My $HOME is
> /usr/users/ad and "~/file" expands to something like "/usrusersad/file".
klingt nach Problemen mit der UNIXMODE-Environment-Variable. Wie hast Du sie
gesetzt?
>
> Already tried tcsh. But this shell complains about an unknown
> terminal "tw52" at startup and doesn't read any personalization file too.

termcap-Eintrag fuer tw52 besorgen oder vielleicht TERM auf ein bekanntes
Terminal setzen (vt52 oder st52 sind verbreitet)
>
> The gcc2.2.2 crashes during preprocessing a simple "hello world"
> program (have already downloaded gcc 2.5.8 but not tried yet).
>
Man erzaehlt sich, dass Versionen 2.33 < Vers. <= 2.57 wg. 68000-spezifischer
Probleme vermieden werden sollten, insbesondere fuer c++. Vom 2.22 habe ich
bisher nichts dergleichen gehoert. Ich arbeite derzeit mit 2.57 ganz
zufrieden, habe aber auch schon den 2.58 auf der Platte.

> I tried to setup emacs. Version 18.57 dumps properly but crashes upon
Mit emacs und jove habe ich auf dem ST bisher keine Erfahrungen.

Ich benutze Mint seit ca. 1 1/2 Jahren und bin bisher nicht auf unueberwind-
bare Schwierigkeiten gestossen. Seit ca. 2 Monaten habe ich Minix installiert,
was insgesamt mehr Komplikationen mit sich brachte (Nicht wegen Minix, sondern
wegen der dummen Anwenderprogramme). Ich bin nun dabei, so alle 2 oder 3
Wochenenden ein neues Tool zu installieren. Mehr schaffe ich aus Zeitgruenden
nicht. Empfehlen kann ich noch mfsfm, den Fileselektor von M. Haebler, die
virtuellen Consolen von J. Lock(e)?, das init-Paket von S.Usher und vor allem
Gemini(1.99), dessen Mupfel erstaunlich gut mit allem zurechtkommt (leider
bisher kein job-Control).

There is this gem.inf (I think it was called that) file and there it says that a .ACC is an executable. So you just double-click on an ACC and then it runs.

> 2. Are there any colour icon editors?

I have absolutely no idea. I'ld like one too for my Falcon. :-)

>However after that anything goes..... up to a point

My boot partition is just above 40 megs and works fine. Probably has
something to do with which HD driver you're using. I'm curently running
AHDI 5.04, but are considering switching to HUSHI (from a German vendor -
if my dealer's correct it comes with the SCSITools package and has some
additional features like HPFS support. Is that right, Julian??).

As for partitioning a large HD, I prefer the partitions as large as
possible. It'll eat some extra space on the small files, but I'd rather live
with that than a gazillion letters to choose from.

And they wouldn't -- not for a while, at least. Why kill a chance that things
might turn around, and the Jag would start selling well? No sales = IBM doesn't
get paid. Bad.

Anyway, the facts are that availability has been limited on the systems, and
after an initial rush to buy systems, the sales have slowed down. Perhaps this
will change when there are some titles for it that generate a "buzz", like
Street Fighter and MK have done for it's competitors.

>>Both companies can produce impressive lists of developers, but many of these
>>developers are taking a "wait and see" attitude before commiting resources
>>to long term projects.

>Yes, this was true for all game systems. However in the stores that I
>have talked too, they are very excited on how well the Jag is doing.

And the people who hold the purse strings are percieving it to be a flop. Not
that I necessarily agree with this perception -- I think it has been a modest
success, given the limited distribution and advertising, and small number
of titles available.

>Thats true. But the Jag will get more titles before the CD 32 even shows up so
>its probably going to be a fair fight.

Highly unlikely. The best case scenario for the Jaguar is that it will have
12 titles in 6 months. The CD32 already has at least 30. And the second
generation titles are nearing completion. No, a lot of titles don't necessarily
guarantee success -- but it helps give the impression early on that the system
has a lot of support.

>1. 3DOs price cut was based solely on supply and demand. Since the supply is
> high and demand low, I don't expect to see any sort of price cut.
> Especially when the other hardware makers appear to be backing out.
> (ei Sanyo)

That is incorrect. AT&T and Sanyo have both restated, quite recently, that they
intend to manufacture and sell 3D0 players. There is also an unnamed fourth

manufacturer of them -- probably waiting to see how it goes.

As I mentioned in another posting in this thread, it is not likely that there will be a price cut any time soon. The actual laws of supply and demand are ,of course, that higher demand equals higher price. That is not the case here. More likely is that the 3D0 is rather expensive to manufacture, and could be heavily cost reduced, given time. That, I am sure, they are feverishly at work on.

>2. The Jag is already probably a break even propsition.

Which Atari cannot afford. They must make some money on the system. They don't have a large "war chest". If there is a price reduction on the system, it will come by getting rid of the pack-in game. That won't happen until there are more than 4 games for the system.

>I was reefering to microsoft's OSes. (and 95% of everything else they make is

While I am no big fan of Bill Gates, I can't help but notice the number of people who own Amigas and clamor for a word processor "like Microsoft Word".

>>Dream on. With all the nice, alternative OS's available for Intel based
>>machines, most continue to use Dos/Windows. It's application driven. Most

>Yes and everyone said the samething about dos 3 years ago, and 3 years
>before that, it was the Commodore 64.. etc,etc..
>Markets changes.

But there has to be some continuity, or people won't buy it. Even OS/2 supports Windows applications -- do you not find something twisted about a product like OS/2 for Windows?

Yes, eventually, everyone will say goodbye to DOS (yeah!) and run a ducky OS that doesn't cripple the hardware, or force the user to work in a way that is not comfortable. But it takes time. From the reactions I am seeing to Chicago, it looks like it is a nice idea, but it still has DOS lurking underneath.

>PPC are likely to run Windows slower since it'll be emulating it.

Unless something like Windows NT is ported to the architecture (highly likely) and applications are rewritten and recompiled for it. People will be given the opportunity to "upgrade" to an application that is for the PowerPC.

>I think your assuming too much. Business wise, yes thats true, but in the
>private sector, its a different ball game. In case you haven't noticed, most
>Intel owners HATE windows. (even though they might have 3 or 4 copies)
>Out of the 50 mill copies out there, only like 10 million are in use. Since
>there are 100 million dos machines out there.. wonder what everone is using..

Pirated copies of Windows and DOS, mostly. Until Microsoft releases something better.

There's a program called MTOSACC, or something like that, that
allows you to start up accs after mtos has booted.

The only color icon editor I've seen is a German shareware demo.
Unfortunately, there doen't seem to be an address to send your
money to to get the real program. The demo will not save your
changes. I think it's called ZOOM.ZIP or something like that.

>users of the Internet than anything else.

Well, I know I've been trying to be a little bit of a "gateway" myself in moving stuff back and forth between GEnie and the Internet (for instance, the "Tempest 2000" pictures from GEnie should be available on atari.archive when they verify them). Of course, a lot of good stuff appears out on the net first (like CoNnect, MiNT sources, etc) and those can be uploaded to GEnie as well. While uploading and downloading does not cost too much (I'll download anything (shareware/pd) that looks interesting anyways), it still takes time to upload stuff (even for free)...

>I know if I understood how to PUT files better, via a dialup link to an
>Internet gateway, I'd have several files to upload. Most Atari telecomm
>users just haven't gotten Internet literate yet...

I doubt just Atari users, but point well taken. When I upload something to say atari.archive.umich.edu (assuming I can get on :-) I just do the following:

-upload a file from my Atari to the unix box that I use on the net (generally with Zmodem)

-create a readme file with a short description so the file verifiers have an idea of what the program is, and who uploaded it - for instance, if I wish to upload "gemcdrom.lzh" I'll also create a text description of it called "gemcdrom.readme" and would upload that as well...

-"ftp" to atari.archive.umich.edu

-cd to "atari/New"

-type "bin" to set transfer type to "binary"

-then simply "put" the file to the remote location, i.e. "put gemcdrom.lzh" and "put gemcdrom.readme"

That's pretty much it. The basic trick is to upload the file from
your system to a system on the internet, and then FTP it up from there...

Rob

...for the atari.archive.umich.edu crew, I have a little suggestion -
is it possible to set up a way (an anonymous login, or separate
name i.e. "uploads.archive.umich.edu") where users would simply be
able to upload files and not download them? mayble only
have access to the atari/New directory, etc? This would be nicer
than the 10 anonymous users limit, and probably wouldn't use as
much of the system's resources as all the downloading would
(since for each upload, tons of downloads probably occur). Just a thought...

Well actually, I believe there is very little software left of any value that
doesn't like TOS 1.4, Steven.

If you have no complaint with your current TOS 1.2 equipped machine, then perhaps
you should NOT upgrade ("ignorance is bliss" and all that rubbish). But believe
me, TOS 1.4 is well worth the upgrade price, IMHO. Other than a hard disk drive,
it's the most productivity enhancing upgrade you can buy for a TOS 1.0/1.2 Atari.
Heck, it's worth it just for the improved disk access speed!

Then again, you could always zoom right to TOS 2.06... now that's something else!

Cheers,

-Hutch- @ Fair Dinkum Tech

>>not exactly thrilled with Atari's computer marketing (or lack of) as
>>of lately, but they have been known to develope some incredible
>>products for a good price.

>Yes, they HAVE been known to do this. But that's past tense.

Right. They did nothing for 6 months now, and I don't think they will do
anything in that area again. obviously they drop the ST/TT/Falcon line
AND their users (and developers) in the same way they did some years
ago with the 8 bit machines...

>>Even the Falcon, yes the Falcon, is a good value (of course, I am biased
>>as I have one :)).

>Well, I have one too. But that doesn't blind me to what's going on in

I have one, too. And it's SLOOOOW. The graphic is bad compared to
moderns clones, the sound is in the $300 area (I measured the frequency
response myself), the DSP is nice for a few applications (but the TT
could do the same in C...).

>>Just look at the jaguar! People are amazed that Atari brought out that

>Quite honestly, Scott, I'm SICK of hearing about the Jaguar. It's a great
>game machine, alright, but that doesn't mean diddly to me as an Atari
>computer owner/user. And I hope you don't belong to that camp of deluded
>souls who believe that good Jaguar sales = new & improved Atari computers.

Once again, you're absolutely right! The last issue of ATARI EXPLORER
ONLINE was terrible. Jaguar all over the place! Someone seems to have
forgotten, that most ATARI users use computers - not the Jaguar!!!

What really makes me angry is the way ATARi officials talk to the
public. Just look at Bob Brodie in the latest Online Conference. He
was asked by quite a lot COMPUTER users about the future plans and
just says nothing but 'bubbles'. (and they don't do that just with
users - it's the same with developers).

In conclusion: I used ATARi computers for 10 years now, but I
probably won't use them much longer...

Actually, it's about impossible to pin down the "can't make enough" theory/ rumor. There are a number of possible reasons where Atari might not be able to ramp up production to meet "current demand", most of them run out 60-180 days from the point where they commiteed to a production version. On the other hand, Atari can decide that with the current lack of software, it isn't time to try national marketing or that a big ramp-up before the fall selling season doesn't make sense. The other possibility is that "selling faster than they can make them" is not a *market-wide* reality and the "sell through" isn't what they'd like.

THe point is that Atari hasn't released any sales or production figures yet, and it's quite difficult for an outsider to tell just where things are at. They should have a quarterly report out soon, which *may* have some useful information. Keep your grains of salt handy.

> Yes, this was true for all game systems. However in the stores that I
> have talked too, they are very excited on how well the Jag is doing.

Excitement for a product they have to sell is *always* greater than for one they don't - these are *sales* people.

There's been several posts in which people complain about Atari's support of their computer users, and people saying that Atari has finally gone to far, and it's time to leave.

There's something about this whole thing that confuses me. It's been more than 15 years like this. OK.... Atari did abandon the 8-bit, and a lot of people bought STs. But has Atari EVER been good about marketing? (Granted, you used to be able to go into any Toys R Us to buy an 8-bit computer, and now you have to mail order everything.) But I HARDLY think any of the people in this group bought their Ataris because they saw a great ad on TV, or wanted the largest possible software base.

So what is it that people are perceiving right now? That the Jaguar will stop ST production? Were ST's being produced in mass recently? Do a lot of Atari owners need new ones?

And if Atari goes to the extreme (Which they HAVE NOT yet) and officially divorces from the computer business entirely, ignoring all calls about computer lines, are things really so different then?

I'm not saying I've ever enjoyed the fact that I was using an unsupported, underground computer, but what support I did get I got from the Atari community, and they are still around.

Where do you get this "fact"? The Jaguar hasn't even been released
outside of the test markets, so how could there have been any sort
of initital rush, slowdown, etc. already? If it were available
nationwide and sales were slumping, I would probably agree with you,
but the fact is that it's not available yet.

>of titles available.

I'd love to hear who these people are, those holding the purse strings
that is. If you mean the guys on CNBC, well, I guess I just have
about as much faith in them as I do Commodore marketing.

As for advertising, I've seen more Jaguar ads in the past few months
than I can remember seeing for an Amiga in years! At least Atari is
advertising outside of the machine-specific magazines. Commodore's
approach is what I think of as "preaching to the choir." I can see
it now, they'll advertise the CD32 in AmigaWorld and AC, but not
bother with the various gamer mags where the real market is.

>>Thats true. But the Jag will get more titles before the CD 32 even shows up so
>>its probably going to be a fair fight.
>
>Highly unlikely. The best case scenario for the Jaguar is that it will have
>12 titles in 6 months. The CD32 already has at least 30. And the second
>generation titles are nearing completion. No, a lot of titles don't necessarily
>guarantee success -- but it helps give the impression early on that the system
>has a lot of support.

I'll go out on a limb and predict that the smaller number of Jag
titles will be of higher quality than the larger number of CD32
titles. Alien vs. Predator and DOOM are enough to counter the
numerous Amiga ports that are counted as CD32 titles.

As for early impressions, Atari is at least attempting to make one.
It still remains to be seen whether or not Commodore is going to
make anything but a half-hearted attempt to do so.

>>1. 3DOs price cut was based solely on supply and demand. Since the supply is
>> high and demand low, I don't expect to see any sort of price cut.

>> (ei Sanyo)
>
>That is incorrect. AT&T and Sanyo have both restated, quite recently, that they
>intend to manufacture and sell 3D0 players. There is also an unnamed fourth
>manufacturer of them -- probably waiting to see how it goes.

If the 3DO players were selling for $300, I'd bet that they'd end up
dominating the videogame industry. At $600+, they're going to attract
a much smaller number of people and will end up being like CD-i, CDTV,
LaserDiscs, and other overpriced high-tech flops.

>As I mentioned in another posting in this thread, it is not likely that there

Atari, like Commodore, will make money on the licenses for the games.
I'm not sure what Atari's fee is, but I'd bet that it is at least the
$3 that C= charges or more. This money is probably nearly all profit
and will only increase over time as more units are sold and more games
become available. Nintendo and Sega certainly can't be making a whole
lot of money on their consoles, but they aren't doing to badly. :-)

>>I was reefering to microsoft's OSes. (and 95% of everything else they make is
>>crap too) And I remember everyone writing of Sega Genesis because Nintendo has
>>all the add dollars.
>
>While I am no big fan of Bill Gates, I can't help but notice the number of
>people who own Amigas and clamor for a word processor "like Microsoft Word".

Well, I'm not even a fan of Microsoft Word, but after using a few of
the Windows word processors, it's hard to use any of those for the
Amiga and be impressed. Personally, emacs is all I need for 90% of
the things I do, but most want or need more.

>>>Dream on. With all the nice, alternative OS's available for Intel based
>>>machines, most continue to use Dos/Windows. It's application driven. Most
>
>>Yes and everyone said the samething about dos 3 years ago, and 3 years
>>before that, it was the Commodore 64.. etc,etc..
>>Markets changes.

While I hope that something better comes along to knock Windows and
DOS off the top of the mountain, I have my doubts that any of the
current contenders will be able to do so. Intel, Microsoft, and the
others involved more than likely enjoy being where they are and won't
be toppled without battle.

>But there has to be some continuity, or people won't buy it. Even OS/2 supports
>Windows applications -- do you not find something twisted about a product like
>OS/2 for Windows?

No more twisted than an Amiga user buying Emplant, AMax, BridgeBoards,
and other emulators for their systems. All methods provide a way to
run applications from more successful environments on less successful
ones.

>Yes, eventually, everyone will say goodbye to DOS (yeah!) and run a ducky

It's really too bad that IBM and Microsoft had a split on OS/2;
imagine what OS/2 might be like had all of the resources for NT,
Chicago, etc. been used on it instead...

>>PPC are likely to run Windows slower since it'll be emulating it.
>
>Unless something like Windows NT is ported to the architecture (highly likely)

>and applications are rewritten and recompiled for it. People will be given the
>opportunity to "upgrade" to an application that is for the PowerPC.

I'm still skeptical about the PowerPC, although I do like it and am
impressed by it. If and when one is available with a decent OS (i.e.,
no Macintosh crap), I'll certainly consider one. The cousin/sequel to
OS/2, the WorkPlace OS (or whatever it's called) is supposed to be
available for the PPC and may end up being an incentive for many OS/2
users to junk their Intel boxes in favor of PPC boxes.

>>I think your assuming too much. Business wise, yes thats true, but in the
>>private sector, its a different ball game. In case you haven't noticed, most
>>Intel owners HATE windows. (even though they might have 3 or 4 copies)
>>Out of the 50 mill copies out there, only like 10 million are in use. Since

>
>Pirated copies of Windows and DOS, mostly. Until Microsoft releases something
>better.

Although I'm aware of pirate copies of both being used, I also see
most new systems including both standard. Heck, at $50 or so each,
it's hard to believe that people won't just buy them. They could
also do themselves a bigger favor and just get OS/2 instead. ;-)

3299. MegaSTE schematic

Newsgroup: comp.sys.atari.st
Date: 1994-02-18 19:20:55 UTC
From: boyd@sonya.math.fsu.edu
Message-ID: <2k34en$8ar@mailer.fsu.edu>
Source record: 192756

Wanted: back issue of ST Format that had a review of the MegaSTE. Included was a schematic of the motherboard. I am looking for:

1. What the exact issue of the magazine is (i.e. July 92).
2. A Xerox copy of the article.
3. The article.

Thus, I am willing to purchase this magazine (or even a copy of this particular article). Alternately, we could work out some other favor/trade (pints of my blood?).

Also, can anyone point me to other MegaSTE articles (preferably with lots of technical info, like what chips are where on the motherboard)? I am interested in any and all I can get, excluding those in Current Notes (I have all of them). I presume some of the other Euro ST magazines also had reviews when the machine came out.

Thanks in advance.

Hey, STers!

I have three unopened classic Atari ST games for sale.

Uridium, Blockbuster, and Plutos.

All three are from Mindscape. $10 each or all three for $20.

Thanks,

3305. I need help reading old Atari ST floppies

Newsgroup: comp.sys.atari.st
Date: 1994-02-18 21:37:03 UTC
From: mmm@park.uvsc.edu
Message-ID: <CLFw1v.no@park.uvsc.edu>
Source record: 192762

This is a second try, I didn't see any responses. Could someone please help this Atari-impaired individual? It seems like something that should be in the FAQ, but I couldn't find my answer.

I need to know if there is any way to read really old Atari ST floppies on a PC. I'm trying to help a guy get some source files from an upgraded 520 ST system (GEMDOS copyright 1985). He says the floppy is dual sided double density, which made me think it might be readable on a PC 720k drive.

However, when I try to read the floppy I get a general failure. I have tried several different ways (including MKS toolkit's dd), always with the same result. Is this because of some basic incompatibility, or do I just have an alignment problem?

Assuming I am able to physically read the data, is there some kind of DOS conversion utility I need to be able to get the files? I found something that looked promising on the umich archives, ataridsk.zip, but it was only 47 bytes long.

If I can't access the floppy, I'm guessing a serial link via Kermit would probably be my next choice...

Any thoughts or help would be greatly appreciated.

Mark Muhlestein -- mmm@park.uvsc.edu

There are programs out there that will format a DOS readable disk on an
Atari. I have one called PCFormat or FormatPC or something that
worked on my old 520ST. Just find one of them, download it, and
format a new disk. You shouldn't need any kind of file conversion
util if these are just standard text files.

Why don't you just use a modem though? It'd probably be easier than
going and finding a formatting utility unless those sources are large.

Good luck,
~Adam Aulick

I do have a TT and NVDI 2.5, but I tend to disagree -- it's *slow*.

> Questions:
>
> 1. How do I `run' desk accessories after mtos has booted?

In GEM.CNF you need a line 'setenv ACCEXT=ACC'. Instead of the ACC you can
have a list of extensions seperated by comma's (ie. =ACC,ACX,FOO).
In NEWDESK.INF you have to tell the desktop that *.ACC is executable, just
copy the line for *.PRG (starts with #G) and change the number of the icon
(first number) and the extension. From my newdesk.inf:

#G 15 FF 000 *.PRG@ @ @
#G 17 FF 000 *.ACC@ @ @

Related questions:
Did anyone figure out how to get the 'setenv ACCPATH=...' working?
And the same for AE_FONTID and AE_FONTSIZE ?

> 2. Are there any colour icon editors?

Yes, the program Interface (resource builder, payware) includes one.

From: gregs@eskimo.com
Message-ID: <CLG1Ho.LI0@eskimo.com>
Source record: 192765

I have a question on the simple but very nice terminal program TEDDY TERM. I think I have version 2.10 or something like that (it's the latest release on the umich archive).

It has lots of nice features and I like the interface, but am I missing something on the control-key functions?

For instance, ^D automatically calls up your DOWNLOAD menu. For those of us who wish to use TTERM on a unix system, this simply won't do. We need the ^D character for a number of things. It also looks like the ^S key calls a function on TTERM, so that means text cannot be paused.

Is there a way around this? I couldn't find anything in the program that would let control-keys be sent to the modem.

> I was wondering what type of interface the Atari 1040ST used for floppy
> drives? Does it use the 34 pin IBM floppy drive interface (still don't
> know what they call that interface)? A friend of mine wants to replace

That would be the one. I had to replace the drive on this ST 'o mine awhile back, and it was actually cheaper for me to buy a high density 3.5" than to find a plain old DS/DD unit. Too bad the ST doesn't take advantage of it.

Well, it can, but not this one. I made up that little 4 nand gate multi-plexer for the HD circuit awhile back, and it worked for 2 days, then never again. What's weird is that the circuit is still working fine, just that the con-troller only seemed to like it for that long...

Mark Muhlestein (mmm@park.uvsc.edu) wrote:

<Mark's trying to read ST disks on a PC...>

ST users often use extended formatting (more than 80 tracks or
nine sectors per track) which won't be readable by MS-DOS. There
could be boot sector and serial number differences, too. Using
a serial link is the best bet, if somewhat inconvenient.

Straight text files will probably be compatible; anything else will
likely need some cleaning up.

I need a simple text editor that isn't too big (will take a short time to load) just to edit ASCII text (for README files etc).
I can use my wordprocessor, but it takes a long time to load and it has many unnecessary functions for that use (extra fonts etc).
I don't need text formatting (actually I'd rather not have it).
Any suggestions of which program I should use?

Hallvard Tangeraas, Oslo, Norway (hallvart@ifi.uio.no)

> enough...once the STRAM Expansion is removed...so...
> ....how can I, if possible, redirect or make the GDOS driver for SLM load it's
> document into TTRAM...?

I'm not sure if you can.. The way I understand the SLM's is that they had
not RAM on them, but worked via a DMA connection to the system RAM. The DMA
and other ST compatable chips in the TT only work in the first 4 meg range, so
you can't use the TT ram of the SLM804.

Of course, I could just be stupid and be misinterpreting your question
(nothing new). If you're really asking how you can get your program to load
itself and your doc into TT RAM, to leave that one meg open for the SLM804,
well then I'm afraid I have no idea (also nothing new).

> on a compressed file... ie: lharc.ttp runs with the argument -x on
> file foo.lzh when I click on foo.lzh...
> I've tried the install application, but it doesn't seem to accept
> arguments correctly/at all... It runs lharc.ttp without the filename!

I have zip,lzh and arc all installed OK. Remember to leave to space AFTER the
argument else it tag's it onto the filename and thus doesn't recognise
it.

So that is stzip.ttp -xr_ <-space after parameter
or lharc.ttp x /r<space>

Also install with the 'full path' button highlighted.

> Perhaps it's like teradesk where you use %f as the filename in the
> argument list...
Don't need to do that . I have actually also installed Lharc_d.ttp without any
parameter's at all ....it'll default to e(xtract) so you could try
that.

:
:
: Marco

I wrote a very small program to play .AVR files from disk an an STe.
(It plays them at the nearest STe hardware playback rate, simply by getting
the DMA system to play a loop and loading one half of the loop when the other
half is being played.) On the slow 400Kb/s hard drive I had then it easily
managed 25kHz mono. I could send you it or the Hisoft Basic source if you
like. It should be easy to play other sample formats as long as they are
signed.
I'll probably do the same for the Falcon sometime now I've got one.

3342. Re: How Fast

Newsgroup: comp.sys.atari.st
Date: 1994-02-19 15:57:00 UTC
From: Peter_Missel@m4.maus.de
Message-ID: <A3047@M4.maus.de>
Source record: 192799

>Is therea newer version of how fast??? The version I have is 1.0 and its
>German.
>
>I got this version from ftp.uni-kl.de. thanx!

This still is the only version available.

Instructions: The three sliders on the left indicate smallest and largest file size, and number of tests. On the right, select the drive you want to run the test on. There's another button where you can adjust the maximum rate displayed - default is an automatic detection, but you can enter your own max rate if the graph disappears in the menu bar :-)

To start the test, press "Run" (hmmm, this one doesn't seem German at all).

While the testing is in progress, press Escape to interrupt. Then an alert prompts you whether to continue or not. After the test finishes, the program asks whether to save the result to a disk file or not.

To exit the program, click on "exit" (surprise).

Bugs: The file size (X axis) in the graphics window is shifted to the right by one raster line.

bye, Peter

PS: Is that finally the version I uploaded to a local mailbox and some other guy transferred to an ftp server?!?

Funny, that's not what the posts I've seen from id have said; the
message I saw (from the guy doing the port to the Jaguar) said they had
some '486 system with a JAWS graphics sub-system... I'm not sure if
that's a system from Intel or what.

Not really... Even old versions of gcc really need more than 1M of RAM.

In <CL9H45.L83@cs.vu.nl>, Ivo van Poorten writes:
> Can anyone explain why gcc needs so much memory and other c-compilers don't...

gcc is for UNIX systems; virtual memory, and usually lots of physical RAM are commonplace. "Tiny" compilers like H&S C (which is based on Sozobon, which worked on 512k machines) and Pure C and Lattice C were all designed for tiny machines, like the ST or DOS (in the case of Pure C).

gcc also does a lot more optimising... optimising requires a lot of RAM when it's built into the compiler (I think), unlike H&S C, which has a separate pass for the optimiser.

> Me too. Only you have to be very careful when porting stuff from gcc to
> hsc, because gcc uses 32-bit integers and hsc 16-bit.

You can fix that problem by explicitly using "long" for 32-bit ints and "short" for 16-bit ints... only use "int" when you don't really care about the actual size. Most systems work like that (check sizeof(long) == 4 and sizeof(short) == 2 to be sure).

Greg> I have a question on the simple but very nice terminal program
Greg> TEDDY TERM. I think I have version 2.10 or something like that
Greg> (it's the latest release on the umich archive).

I too have just discovered TeddyTerm! It's a really nice program...
I just wish it had vt102 and supported the arrow keys... And that the
thing I'll mention in a second was the default, not the option...

Greg> For instance, ^D automatically calls up your DOWNLOAD menu. For
Greg> those of us who wish to use TTERM on a unix system, this simply
Greg> won't do. We need the ^D character for a number of things. It
Greg> also looks like the ^S key calls a function on TTERM, so that
Greg> means text cannot be paused.

OK, here's what you do: Press both shift keys at once. That's it!
Now none of the hotkeys will work!

I wish the programmer had realized how important control keys are to
modemers and had stuck to alt-key combinations for his hotkeys...

I plan to register this program, though. It's very good, and the
registration scheme is nice (send in what you want). It's the first
ST term program I've really felt comfortable with...

It is a bit buggy in places, though... The redialer and the font at
the bottom of the screen cause me no end of grief... And the capture
buffer is always set on unless you manually turn it off... It just
seems that some settings are bass-ackwards...

laters!

Hello there,

A friend has an Atari Falcon and a Canon BJ 10 printer. He'd like to
print out his .dvi files on his printer at 300 DPI, but he has
no suitable driver.

I think he can print out at 120 DPI.

Does he actually need a seperate driver, or can he add an entry in
mf/inputs/modes.mf and have metafont generate his new fonts?

If so, can anyone mail me such an entry..... Else, can anyone suggest
a suitable driver (and it's location)

Thanks,
Martin

3356. Cumana OS-9 for Atari-ST

Newsgroup: comp.sys.atari.st
Date: 1994-02-19 18:49:50 UTC
From: paulseniura@delphi.com
Message-ID: <Bk0I+e+.paulseniura@delphi.com>
Source record: 192613

Does anyone here run/use Cumana's OS-9/68000 for Atari-ST? I'm able to boot it up from floppy, but every time we try to access the hard drive, it's being a little stubborn. Trying to go thru ICD's AdSCSI card to a Seagate ST277N drive, some files can be copied & read back, but we also get "Not Ready" errors on other (usually larger) files. Also, when trying to do a physical format, we get Error #000:255 which means I have to turn on the "enable physical format" flag in the /H0 descriptor. Cumana was gracious enough to send me the OS-9 Technical Ref. manual (Microware v2.1 book, we have v2.3 software), wherein I know how to turn this bit on, but apparently Cumana didn't provide us with a "modpatch" tool.

The only real question of all of this is whether any of you Cumana OSKers have gotten the ICD interface working, and if so how?

(I'd appreciate a direct e-mail reply to 'PAULSENIURA@DELPHI.COM' please. I don't get to access Usenet much.)

>
> I repeat (as I have had no replies):
>
> What real advantages would upgrading to TOS 1.4 do for me???

I am an avid Neodesk user, and I can state that if you use Neodesk there is very little difference between TOS 1.2 _with some patches_ and TOS 1.4 (also with some patches, as the bugs are different, not gone). I just bought a MegaSTE with TOS 2.06, and in 8mHz mode with no NVDI or Warp9 it feels about like my Mega2ST with TOS 1.2 (not that I run it that way for any length of time). I'm not sure about the "feel" of the Atari GEM desktop, as I have not used it extensively for a long time.

In general, I disagree that TOS 1.4 is a major productivity enhancing upgrade. Instead, I would put the ~$50 toward NVDI (~$90) or Warp9 (~$40). Already got one of those? Then I would put it toward Neodesk (~$50). Already got that? Then I would put it toward Diamond Edge (~$50). Already got that? Then I would put it toward Geneva (~$60)......

In other words, there are a whole slew of things that would enhance your productivity more than a wimpy TOS 1.4 upgrade. The one feature that TOS 1.4 has that is IMHO arguably worth the $50 is the 32mb "normal" partition size, as opposed to the 16mb "normal" limit in TOS 1.2. BGM partitions (those with logical sectors larger than 512k) can get you around this limit, but they also waste disk space. I must admit that I am a bit biased against them as well, as the only data destroying problem I have ever had with any ST involved a BGM partition. There are many that state that BGM partitions are great, the wave of the future, etc. I am not one of them, and use them very cautiously :-). Anyway, bumping the GEM partition limit up to 32mb might be worth the $50.

The above is IMHO. Direct flames elsewhere.

>HARDLY think any of the people in this group bought their Ataris because
>they saw a great ad on TV, or wanted the largest possible software base.

I heartily agree. Atari has NEVER been ideal, and no Atarian I know has ever expected them to be. Possibly they are worse now than they were before; but in general, BASHING is something most Atarians have had to deal with from day one. Most Atarians I know fully realize and ACCEPT the faults of the company; it's worth it to them. Living with the endless stream of CRITICISM is the worst part I think...

> So what is it that people are perceiving right now? That the
>Jaguar will stop ST production? Were ST's being produced in mass
>recently? Do a lot of Atari owners need new ones?

It's no different now than it ever has been before. I love my Atari; I know other platforms well and I choose to keep it. And it's not because of a blind obsession; there are many logical reasons why I stay. And I'd be the first to admit I may not always be an Atarian. But I will not switch because of some schmuck's Atari BASHING.

> And if Atari goes to the extreme (Which they HAVE NOT yet) and
>officially divorces from the computer business entirely, ignoring all
>calls about computer lines, are things really so different then?

I buy Atari because they offer what I want in a computer. If they divorce themselves from the computer business, they may not continue to offer what I want. That is a reason to switch. But not a reason to bash. And I would certainly not think less of anyone who, even in the face of such a drastic move by Atari, decided to still stick with them.

> I'm not saying I've ever enjoyed the fact that I was using an
>unsupported, underground computer, but what support I did get I got from
>the Atari community, and they are still around.

I think the Atari community is the best and worst part of being an Atarian... Those who support the computer (not necessarily the company)

support it very well, but those who don't bash it hard.

Oh well. I've just come to accept the endless criticism as part of being an Atarian. I just read it and laugh. ;)

HI
Which laser printer are you thinking of buying? Or have you bought one
already?

I have a second hand HP laserjet II. I like it very much but I have
some problems using it with LDW power, SpeedoGDOS and a few minor problems with
WordPerfect and softfonts.

If you know anything about using the HP with the above, I'd appreciate
your input. If you have any questions about HP laserjets, feel free to ask.
I'll reply to the extent of my knowledge. HP is a good company and they
support their products.

HI Steve,

I like Storm, a new shareware telecom program from Alan "FLASH" Page.
You can mark blocks in such a way as to use part of a line, instead of having
to stop at the end of a line only.

However, I should warn you that the ANSI emulation is NOT good, as far
as the capture buffer is concerned. There's a big gap in the middle o each
line in the capture buffer. Other than that, it's a pretty good program, and
it's shareware, so you can try it without expense.

It's available for download on CompuServe in the Ataripro forum.

HI Waldi,

I think SCSI is better than IDE, but it does cost more. If you want to get into CD ROM, you're going to need SCSI to run that, so why not just get a SCSI hard drive to start with.

My friend can build a computer from the boards (PC's) and he reccommends SCSI, if you can pay a little extra. Most of those packaged deals come with IDE hard drives ('cause they want to keep the price attractive).

Hi Dan,

I captured you list so I can look at it more carefully. I think you've done all of us Atarians a service, even if this is only your personal opinion. Atari information is not that previlent compared to other computers.

I'm not to familiar with MIDI either. As a student of the old fashioned kind of music (piano lessons, sheet music and practicing), I find MIDI and it's output (the waves and tracks) to be very confusing.

Thanks again for a job well done. <applause>

Source record: 192643

HI Witold,

For the spreadsheet I reccommend LDW Power. You can use it with the mouse or in command mode. I think you students will like that. It also has a database as part of it, but I could never figure that out, even though I have a legally purchased copy with full docs. My knowledge of data bases is slim compared to what I know about spreadsheets.

Hi Dan,

What exactly is an Elite II? Is it some sort of high tech Atari peripheral. I thought I knew pretty much was available for the ATari, but I've never heard of this before.

I've got an ST souped up to 4 megs with a Quantum SCSI hard drive, Prometheus 2400B modem, and a used laserjet. I've also added TEC with the latest version of the ST operating system (as of last year, that is). Thought I had all the goodies, pretty much.

Who's going to develop these multimedia apps on the Jaguar/Falcon? The market has consolidated into the PC and Mac.

Am I missing something? The Mac is not suitable for the home market? Why do
you think Apple launched the Performa line? The Mac and the PC have lots of
Apps that are suitable for the homemarket. I suggest you get a catalog from
Mac and PC Connection.

hi.

try getting a replacement power-supply!
i had troubles with the original mega st4 supply working with a internal (!)
quantum lps 120 (supply to weak, 12V went down to 10V :-().
then i bought a compatible power-supply from *best-electronics* in USA. this
replacement power-
supply is stronger and fits perfectly into the mega st case.
costs were 150 deutschmarks, this is about 90 US$. it was worth it.
i am sorry, but i can't give you the address of best-electronics, i've lost it.
:-(

Folks,

I'm in San Jose, California for a couple of weeks. I was wondering
if anybody knows where I could pick up a circuit diagram of an old
STFM while I'm here. Not that I need it (yet), but it would be handy
to have for the future (I recently picked up two 520STFMs with TOS 1.2
and Double-sided drive (beats my single sided one) at an auction for
a total of 30UKP (approx $45) - not bad...and they both work!).

Any help would be appreciated. Please either post or EMAIL me (I
have a link-up with my work in Belfast, N. Ireland).

Hi Jon,

Apple products seem to be over priced, and I don't care for their pull down menus. The ST had more to offer than the small original Macs, with no color and a screen that was smaller than our first TV (back in the good old bad old days of black and white).

This first item is for any ST MIDI users:

Casio VZ-8M rackmount synth $175 obo
Uses phase distortion (similiar to FM) synthesis. 8 voice polyphony,
can be 8 part multitimbral (all sounds would be mono). Also has special
modes for guitar and wind controllers. Fairly good MIDI implementation.
Owners manual and manual on MIDI system exclusive included. Also have
two sound disks in Atari ST format.

Inventory Master software package $20 obo
Complete inventory program for any type inventory.

Thunder! spell checker $10 obo

Citizen 120D dot matrix printer $50 obo
Used for several years with an ST, no problems

Epyx 500XJ joystick $15 obo

Atari 130XE package $100 obo
Includes 130XE computer, Indus GT disk drive, AtariArtist tablet/software,
Axiom AT-846 printer interface, 2 Wico joysticks, LOTS of software.
Will also include printer in package if requested.

Buyer pays shipping. No COD's please.

I have been pondering over this idea for a couple of days, and thought I'd share it with everyone.

I am hoping what I have been reading has made it into my brain clearly

Has anyone every thought of the following:

Knowing that a PPC can emulate different processors, why could someone do for Atari, like Next did for themselves(I hope I understood the Next story). Would it not be possible to abaondon the hardware angle, write a decent OS(atari compliant of course:), and just use it on somebody elses computer? If the PPC does have the ability to emulate another chip, why not just write the OS to the new chip, in another machine?

Give me some feedback, like why it could or could not be done. Again, it is just an idea, from someone who knows nothing about hardware and software technical stuff. I am just an end user, and I kind of like it that way:)

Thanks for reading my idea

Joe

In response to requests to provide the ATC chart on a more frequent basis, this and future 'Special Reports' will do so between normal monthly GEnieLamp publication dates. Attached is a picture of the ATC chart through Friday, February 11. Below are some remarks of my own on what seems to be happening as I see it. Remember, this is only my opinion, and must not be taken as advice to trade this stock in any way. I have an investment position in ATC.

The strong downtrend which followed the peak at 12 3/4 on November 4, seems to have abated to some degree. The downtrend was marked by substantial short selling; the 'short interest' as of mid January was more than 5.6 million shares, or approximately 40% of the 'float'.

By 'float', I refer to the approximate number of shares which are available for buying and selling in the normal course of daily market activity. This _excludes_ the roughly 46% of the total shares held by the Tramiel family, the 25% held by Time-Warner, and the 4% held by various institutional investors. Other stock held by Atari employees and various private investors is probably being held off the market, so less than 14 million shares is available both to lend to the short sellers and to eventually supply them with shares to buy back for replacement of their borrowings. The relatively high degree of short interest may therefore be setting the stage for a fairly strong rise in the stock price once the short sellers become convinced that they cannot drive the price down much further.

Has this "repurchase" process started? The price has remained in a range of about 6 - 8 for over 2 months. It has twice hit what looks like a bottom -- at least a temporary bottom -- at 5 1/2, and bounced back up. The intra-day trading pattern has shown some strong buying, which may indicate the beginnings of covering by short sellers. During the past few weeks, there were several instances of heavy buying just before the close. On February 8, 300,000 shares drove the price up 1/2 point in the final minutes; on February 2, 250,000 shares were traded on an uptick in the last few minutes. Other examples of this type of activity have also showed up. Of course, some heavy selling must also be going on, which is giving the overall effect of an apparent balance or trading range.

Meanwhile, the rumors grow, some favorable, most very negative. If you want to see some, drop by topic 44 in category 14. The overall sentiment seems to be growing more negative daily, just the way it should be as a serious downtrend nears its end.

40 Day Cycle (?) My attempts at trying to fit a cycle model """""""""""""""" to ATC have not been very fruitful; however, a 40 (calender) day cycle seems to have made itself evident. The last three repetitions are marked by low points of Oct. 5, Nov. 19, Dec. 30, and Feb. 8. This cycle has just recently turned up and, if it remains effective, the price of ATC should rise during the coming week. If the

price gets above 8 1/8, then it is possible that a much longer cycle -- properly labeled a 'trend' -- has also turned up.

On the other hand, if the price does not rise this next week, then the outlook is quite negative for the next month or more. Thus sayeth the cycle model. We shall see.

A Fractal Model! Since last October, a few participants in topic 44 """""""""""""""" have been calling attention to the apparent repetiton of certain price patterns going all the way back to last April/May. Each successive repetition covers a longer time span and a wider price swing, but the essential structure seems to remain. One observer, on the basis of his understanding of fractal geometry, correctly predicted, last October, that the rise to 8 1/2 was only the beginning of a move to a high above 12! An impressive call.

Over the past several weeks, I have been refering (in topic 44) to a fractal basis for expecting a prolonged stay in the trading range where we have been stuck for over 2 months. I promised to present a chart showing what I was refering to. Attached hereto is the file 'FRACTALS.PI3'. Highlighted in the picture are the current and one previous repetition of the price pattern. Careful examination, on an enlarged scale, of the entire price chart since April suggests several repetitions of quite similar structures.

This fractal stuff has been both interesting and amusing. It has yielded some insightful forecasts. I have even found a serious book on the application of fractals to stock market forecasts; I intend to read it someday. Meanwhile, you are invited to interpret the pattern for yourself; it seems to be pointing to an interesting future for ATC. For the time being, however, it suggests to me a continued stay in the present trading range.

I'd have to disagree about Marcel's stability. Set in standard word wrap mode, it has bombed completely out on me on occasion when I delete from one line up into another... it seems to happen inconsistently, not always the same way, not at the same times, but it does happen, and it's rather irritating.

I also wish the author would have used standard key codes to let you enter extended characters. the ALT+KEYPAD method of character entry IS built into the ST through a BIOS call; I don't know why he just didn't use that...

From: diehl@r-node.io.org
Message-ID: <2k74lg$aco@r-node.io.org>
Source record: 192556

First of all in order for a floppy disk to be readable on a PC, it must be formatted to 720k (9 sectors, 80 tracks) with an IBM bootsector (which TOS does not put on as standard; most floppy formatters and copiers allow the option of formatting to MS-DOS standards). If the disk is a high density, and the drive on the PC is a high density drive, the second hole must be covered, otherwise the PC will refuse to read it, assuming it's fomatted 1.44 meg instead of 720k.

>not just write the OS to the new chip, in another machine?

James,

Many others have thought of exactly this. Not necessarily Atari themselves but 3rd Party Developers ever since the PPC was a concept. The PPC is theoretically able to perform exactly what you described i.e. it could run TOS, MultiTOS or Unix, OS/2, Nextstep...you name it (OS), it could be written for it.

However it's not that simple. Atari themselves are concentrating themselves strongly on the Entertainment Market so we won't get to see it from Atari for a long time, more than likely.

3rd Party Developers as a matter of fact have offered to do this i.e. develope an Atari OS for the PPC. However they need to get the license to it, and consequently atari's permission and support. THAT is the big problem. Atari very rarely gives anything out, TOS and related is one of those things. The fact that the Medusa/Pandora actually was allowed to use the TOS is a miracle in itself. It's part of the reason why the GeSOFT Eagle is slowed down (so I heard), is the TOS license.

The stumbling block to the future of atari computers currently is invariably atari themselves. Of course atari has nothing to lose in releasing TOS, some might say...but it appears as if atari does not like to lose control over their influence in the computer market, which is why they are so tight on TOS.

What Up All.....

Does anyone remember this BBS name from a while ago (88, 89?) It was called 'The Prarie Chip' and it ran on Forem ST software. It was based in Wyoming before the Sysop (A woman if that jars anyone's memory) moved to Denver. I believe her node was 45 on the Forem list. Due to the fact that she moved and I went into college and lost any free time 8-) I managed to lose touch, . I forgot the name of her BBS till just now (Saw a msg. from Prarienet.org; jarred the few cells!)
If anyone knows of her, drop her a note with my address or give me the info straight out. I (when able anyway....) use the name Mission: (Have since 83....) and I ran a Forem ST BBS called Graffitti BBS in NJ(Node 17!). Just want to know what became of her and if she's OK...
Hasta,
Wood

There is another tool called "CheckDisk". It's from Atari but freeware !
It can "repair" lost clusters and "compress" partitions. Works fine
with BGM-partitions and i had never problems :).

The program is called Zoom! and is basically a cut-down version of a full resource construction set called Interface (containing just the icon editor as far as I know).
Both products are German, and were distributed by Shift. According to the latest edition of Atari ST User, Shift have ceased trading, which is a great shame, but all their products have been taken over by a company called No1.
I think HiSoft are handling the UK distribution of Interface, but I'm not sure about Zoom!

Elite II is a game - sorry to dissapoint you! However, it is supposed to be
excellent (I haven't played it myself). Frontier - Elite II (to give it it's
full name) is the sequel to the ageing classic Elite (no suprises there) and
is a space trading/fighting/exploring game.....

Supposed to be pretty darned good......

1. Never install HSMODEM (DRIVIN/SCC) together with FPATCH2 or any
other Bconmap-Fix.
2. Installing FPATCH2 together with BMAPFIX2 makes no sense. BMAPFIX2
has to be the last solution for silly programs like Rufus 1.35 and
is not recommended for the standard configuration! I wish the
BMAPFIX2-Author would point this out in the documentation.

As I remember, there comes no SOUND.CPX with XControl 1.31. There is an
FSOUND.CPX and it's for the FALCON only. Just install your old
SOUND.CPX an enjoy! ;)

> Also, is 1.31 the newest version of xcontrol? Thanks in advance.

Yes. There was a modified version of XControl 1.31, called XControl
1.31modifi (xcontrom.lzh), but Wilfred Kilwinger from ATARI has
forbidden the distribution of it. All known XControls have a bug in
saving registers because of the old TurboC-Library. Recompiling
XControl with PureC would solve the problem, but it seems to be too
hard for the people from ATARI to do this.

Bye,
Knarf

In what way are Apple products overpriced? I thought that the Mac's
price/performance is cheaper than ST/Falcon now adays.

A quadra 605 is cheaper than a STE with harddrive.

In the UK 1 new STE costs $200
1 40meg harddrive $300

200+300=500 , you follow this ok Peter?

nowhere can you by a mac for $500

Bye,

3417. help with GEM programming in C

Newsgroup: comp.sys.atari.st
Date: 1994-02-20 18:14:15 UTC
From: dvasilef@copper.ucs.indiana.edu
Message-ID: <CLJBzr.49n@usenet.ucs.indiana.edu>

Is there some kind soul out there that writes GOOD GEM programs in 'C' and can mail me some example code? I'm having a hard time getting a GEM version of "Hello World" working (ie in a window). either some nice example code or the name of a decent book would be very helpful. I have professional GEM and the Atari compendium at the moment.

thanks

David

I suggest you try out my port of JOVE. It's a reasonable small, fast and powerful emacs clone. Available from ftp site "ftp.icce.rug.nl" in pub/tom/jove.

I imagine that this is going to promote quite a few responses - Elite was first developed for the BBC computer made by Acorn. Working in 32K of RAM it was a wonder of the western world.

If only Elite II (which I still play and like) had kept pace with the increases in technology - it's good but hardly revolutionary.

I would like to clarify that the BLIT speeds I posted were tested using vro_cpyfm() under standard TOS. This is the fastest way that I know of to BLIT. Does anybody out there know how "low level" a routine this OS call really is? Is there enough TOS overhead involved in these block functions to significantly effect my results? Does anyone know a faster way to BLIT?

Thanks a lot! :)
Jeff

Well try and run Connect on a normal ST running Med Res, The STORM is far far better, you get a full screen for one thing, plus background comms with out having to run it as a ACC....

I wonder if Connects Zmodem runs with the latest VMS Zmodem, THE STORM does but FLASH 2.2 does not...!!!

I will try Stalker and Connect to find out, I will leave a report here...

3425. 'Powder' PC

Newsgroup: comp.sys.atari.st
Date: 1994-02-20 21:19:17 UTC
From: donm@ucon.gun.de
Message-ID: <1994Feb20.211917.27952@ucon.gun.de>
Source record: 192582

I'm slowly getting a tad furious ;-) with all these PowerPC groupies.
I wonder how many have actually bothered to check this processor out
before drooling. So, here's a reality check.

First of all, we have to remember that in spite of being made by
Moto (traitor! ;-) the original design is IBM, ergo - garbage by
definition, particularly in the areas of software and hardware.
Other than that, it's OK... :-)

When it comes to instructions PPC (PowerPC) is a mess! As I wrote in
my local box recently, there are three types of problem instructions
on the PPC :

1. 38 unimplemented Power 6000 instructions which must be software
emulated by 601/3/4 and 620+

2. 20 Power 6000 instructions implemented on 602/3/4 which subsequent
PPCs such as 620 will not have and would therefore have to emulate

3. 47 instructions which 620 will have but 601/3/4 do not and some
instructions must, again, be software emulated.

And, of course, only a bozoid the magnitude of IBM can call a processor
with 200+ instructions a "risc".

On the hardware side the PPC looks impressive for about an attosecond.
True, 601/3/4 have the 88110 bus (Moto's own Risc) but 620 (and presumably
up) have a different bus. In "true blue" tradition the processor is
incompatible with itself which means you can forget any easy processor
upgrades. (Don't bother telling me 620 is 64-bit, I know.)

Hopefully this will help cut down on PPC salivation. Please send flames
to advocacy (I don't read it) otherwise they will be gleefully ignore.

I have the December issue of Mac Format with me. A authorized Apple reseller
mail order called Computer Warehouse has the following Mac prices:

Mac LCIII 4/80 with keyboard for 600 English pounds.
with display plus monitor 699 English pounds.

Features lacking in the STE: 25 mhz. 030, SCSI, networking, more memory and
harddisk space, higher color resolution with 16 bit color, memory expandable to
36 megs and is backed by Apple, a responsible corporation run by real superior
management!!!

In the United States a one meg STE with out harddrive is $399 if they are
available. To add a decent size external harddrive would cost $400-500 more.
For the same price you can get a 040 Quadra 605 for about $900 with keyboard.
An LCIII with keyboard can be had for about $750.

Know were in the states you can buy a Falcon with harddrive for $800 new!!!

Microsoft was just following standard Microsoft procedure and preannouncing in the face of major competition. Microsoft has spent millions developing video server technology that will run on ordinary PCs. But Oracle has cornered just about every major contract in this area. Microsoft won't be ready for another year and a half, so they did the only thing they could do, preannounce.

In this case, it won't work because ORCL just isn't the push-over MSFT's usual competitors are.

The PPC603 is slated to cost quiet a bit less than the PPC601; Atari's
main concern has always been putting cheap silicon into their hardware.

There was one just released about a month ago... I just got my copy last
week (got a free one 'cause some of my stuff is on it).

If you can ftp over to atari.archive.umich.edu or one of its mirrors,
there's a file there describing the GEMini CD-ROM from Walnut Creek...
it looks pretty good, but I haven't poked around on it yet.

How does the Marpet board attach to the ST? My ST has some seriously
mutant RAM expansions (yes, two... one is a bizarre X-Tra RAM card that
sits between the video shifter and the motherboard, with a big wire
heading off to the MMU, the other is a pair of SIMMS hardwired into the
motherboard)...

Ah, and you of course know for a fact that this is not so? Face it, if it weren't for the Jag, Atari Corp. would already be past history and there would be NO Atari computers. That's a fact for sure.

> The betting office is now open for those who think otherwise. ;-)

Ok, we now know what you, me and Chris "the Atari will never release another computer man" Herborth thinks so let's here some others. :-)

>Dungeonmaster III for the PC. Darn!
^^^

To be honest,it's only Dungeon Master II - not III.
And it is coming for Amiga/PC/Mac and maybe consoles... >(
But FTL is still developing it with some help of Interplay - their distributor.
Maybe Interplay owns the rights to Dungeon Master too now.For those who might
point out that Psygnosis has re-published the game in Europe along with the
PC-version (i'm speaking of Dungeon Master I,not II !):As far as i know
Psygnosis only bought the rights for Europe and only for DM I.

>Fruit & Vegetable is often wanted in Lalande's Bulletin board
>Robots/Computers is often wanted in Sol's Bulletin board

Crikey. It took me four HOURS trading between Sol and Barnard. Luxury
Goods (and Liquor when the stocks of that are low) to Bardard, Robots
(and Computers when low) to Sol. $50000 to $100000 per trip in a Lion
Transporter.

>- I Sold all but Hyperdrive and automatic pilot.

What about atmospheric shielding? Although I admit, I find docking in
orbitals much easier (well, launching is easier docking is of course auto)

>it was a wonder of the western world.

Sorry - i know the Acorn BBC - but it was not a very "important" machine
in germany (altough it was better than the C64 i guess).
Because of that, i did never see any Elite for the Acorn, only for the
Commodore C64 (wich also had a 6502-compatible CPU).
But this machine also had only 64k of RAM.

Ciao, Arno

>> a great way to get AES 4.

>I do have a TT and NVDI 2.5, but I tend to disagree -- it's *slow*.

Well, I tested it this weekend, with no special adjustment of
priorities, I ran a compile from bash in a MINIWIN. It took 80 seconds
under MultiTOS. I ran the same thing from a bash window under TOSWIN
running as an application (ie. not an ACC which would be slower) under
plain TOS 3.06, and that took 74 seconds.

So, MultiTOS is costing me just *** 7.5% CPU ***.

Sure, if you start running multiple applications, the machine will
slow down accordingly. But that's obvious.

Maybe it just seems slow... try turning up your double-click rate,
as that affects how quickly the system responds.

3453. HSMODA02

Newsgroup: comp.sys.atari.st
Date: 1994-02-21 09:18:02 UTC
From: wwc@dxhrb3.cern.ch
Message-ID: <CLKHu2.I3s@dscomsa.desy.de>
Source record: 192359

Concerning HSMODA02 Harun Scheutzow (the author) asked me to publish the following posting of him. (Mainly because HSMODA02 coming with the conn245.lzh distribution was one of those beta releases which I accidently took for the official one)...

Harun writes:

Somebody (I don't know who) distributed the BETAversion of the HSMODA02.LZH-package. If you find this BETAversion on your computer, in a mailbox, on a fileserver or so, please delete it or inform the sysop to delete it. This BETAversion is included in the CONNG245.LZH-package, but Wolfgang Wander did NOT the first step to distribute this HSMODA-version not made for the public.

All the drivers of the BETAversion have (not less than) one bug in the Fcntl TIOCFLUSH which may cause bombs on STs after file transfers. That's why I strongly recommend to delete the BETAversion and to use the official version, which may and shall be distributed.

The BETAversion has the following properties (if one of these points occur, delete the archive)
- Upload before January 9th 1994
- Some text files don't contain an english translation (that means, only the German part).
- The drivers (MFP*.PRG, *SCC*.PRG) have the date 1994-01-01 (January 1st 1994)
- HSMODA02.LZH is shorter than 80000 byte (is 71764 byte long).

The right official version has all the following properties:
- Upload after January 9th 1994
- All text files contain an English translation too.
- The drivers (MFP*.PRG, *SCC*.PRG) have the date 1994-01-06 (January 6th 1994)
- HSMODA02.LZH is 84598 byte long.

Greetins, Harun

From: schweitz@reich.uni-koblenz
Message-ID: <2ka3gkINN9qa@mailhost.uni-koblenz.de>
Source record: 192365

Hi folks,

since saturday I'm the (happy?) owner of a MegTT, which is a fastram card.
Currently it has got 8MB RAM and it works really nice (TeX is almost twice as
fast).
Now my problem: Since I plugged in this card, my NOVA VME plus doesn't work
anymore. Sometimes it displays nothing at all,sometimes only the menu and the
best it did was 640*480*2.

So, is it a hardware problem?
Doesn't the driver (Version 2.01) support TT-Ram?
Is the TT powersupply (64 W) to weak for 13 Mb (4ST+8TT+1Nova) ?

I'm dispaired, please help me!

Thanks in advance,
Thomas.

email: schweitz@informatik.uni-koblenz.de

Hello world,

I've got a MegTT with 8 MB. I compared some programs with and without TT-Ram access:

ST-RAM TT-RAM

TeX 3min 50s 2min
POVRay 1min 15s 0min 47s
pento 11s 6.7 s (searches for solution in the game pentomino)
mountain 59s 50s (generates fractal mountains)

Also I remeber a comparison of data transfer rates:
ST-Ram: 3.6 Mb/s
Atari-TT Ram: 6.5 MB/s
Mighty Mic: 6.6 Mb/s
MegTT: 7.9 Mb/s

Bye, Thomas

Just an interested post here......

I just read Gunter Minerup's review of the TT version of SoftPC
the software only IBM emulator that apparently worked very nicely.
It's a shame it will never see the light of day (developement was dropped
due to an argument with atari). (STUSER magazine)

(NOTE: I am NOT talking about the old PC-Ditto1 software emulator.)

This is criminal......I could almost be tempted to ask if anyone has got
the pre-release version that Gunter got from a BBS ? But it's comercial,
even if it's never getting released.....he got it of a BBS in Germany??

But... you need a HD drive for that. But... with a DD drive it's also
possible to read up to 10 sectors/track and more than 80 tracks (depending
on the drive how much tracks you can read). You only need an 'INT 13H'
replacement, which comes with several exotic formatting programs like
fdformat and fmt. These are both available at wuarchive.wustl.edu.

I just read (by complete chance) a post in the amiga group about
UMS 2 being a budget game.. I have the original UMS (Universal
Military Simulator) for the ST and while it is enjoyable (still)
its a bit slow and limited.

Has anyone heard of UMS 2 for the Atari ST at all ??

E-mail please.. my project deadline is looming (gulp)..

Ta,
Dave.

3467. NeoDesk and Falcon: Compatible?

Newsgroup: comp.sys.atari.st
Date: 1994-02-21 13:58:59 UTC
From: djs@jet.uk
Message-ID: <1994Feb21.135859.13812@jet.uk>
Source record: 192374

I had been running the well out-of-date Neodesk 2 for some time, but it is not quite right with the Falcon AES (redraws get a bit mangled, because NeoDesk 2 makes assumptions about the widths of scroll bars, for example).

After seeing someone else's Version 3 on an ST I decided to upgrade, but which versions are Falcon compatible? I borrowed 3.01, but it refused to run at all (thinks it wasn't started from the desktop). Silica shop had 3.03, but didn't know if it was Falcon compatible, and didn't want to break the seal on their copy in order to find out.

I tried asking Compo, but they are only dealing with NeoDesk from version 4 onwards, and that isn't due out until "at least April or May".

>Is that v3 dongle (red) ? Mine fits perfectly.
Yes, it is version 3. It is red (well, claret perhaps), and it does not fit. Perhaps my Falcon is a newer revision (it's quite new). Underneath the socket, protuding as far as the socket itself, is the circuit board, and under that is metal shielding.

I would call Harman Audio (the UK disributors) but I can't find an ad with their number, right now. Anyone have the number to hand? (Directory enquiries aren't very helpful when you don't know the town!).

MBB>There is a German mono game called Baller that sounds like it will
MBB>interest you.

Well, the archive may be named Baller; but the games' name is 'Ballerburg'
(Shooting-Castle to translate it dirty).

Some excerpts of the game:
You (and your oppnonent, maybe a human too or the computer with different
levels of strength) choose a castle with depots for powder, cannonballs, money,
There's a king too who comment's your playing. Then you must try to hit your
opponent's castle to destroy his cannons, depots or the king ;-)
The game it VERY old but VERY funny too. And it's PD.

Bye
Stefan

For all I know, MiNT does make use of the PMMU in that it support memory protection. Seems to me that PC Unixes are the only OSs that share this feature so far on microcomputers.
Of course, the MMU might be used more efficiently -- just recently, I was told it was possible to use it to re-map freed blocks of memory such that all free memory forms one large, contiguous block at all times and get rid of memory fragmentation. Sounds cool to me.

For myself, I can say that TOS compatibility will be a crucial difference between a future Atari computer and others. Other than that, I think it would be a good idea if Atari promoted the development of a free Unix if they want to sell high-end computers in the future. If, in a year or so, there is a power TOS machine and Linux available for that, I will likely buy that.
About the DSP, I don't care that much but it'd certainly be nice to drop it in. I can imagine that the (Multi)TOS environment is a much better basis for making use of a DSP than the crummy Mac OS.

I saw a summary table in Computer Shopper a few months ago that
said the 68060 was superscalar and had a deeper pipeline (which
should allow for a higher clock frequency). A friend threw away
the magazine before I could actually read the article, so I don't
know if there are any other major differences.

From: boyd@gauss.math.fsu.edu
Message-ID: <2kanan$1ri@mailer.fsu.edu>
Source record: 192385
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I post this once again. I have found someone that can sell me back issues of various ST euro publications (Steves Atari Store in CA). I just need to know the month and year of the issue I am looking for (though I would not turn down an offer for a Xerox for some cash, of course). If you remember seeing this or any other good discussion of the MegaSTE model, please let me know what magazine and issue it was in. Thanks in advance.

Wanted: back issue of ST Format that had a review of the MegaSTE. Included was a schematic of the motherboard. I am looking for:

1. What the exact issue of the magazine is (i.e. July 92).
2. A Xerox copy of the article.
3. The article.

Thus, I am willing to purchase this magazine (or even a copy of this particular article). Alternately, we could work out some other favor/trade (pints of my blood?).

Also, can anyone point me to other MegaSTE articles (preferably with lots of technical info, like what chips are where on the motherboard)? I am interested in any and all I can get, excluding those in Current Notes (I have all of them). I presume some of the other Euro ST magazines also had reviews when the machine came out.

Thanks in advance.

It is supposed to be compatible with the Falcon and MultiTOS. It has a
few bugs on my ST with MiNT, occasionally crashing (but hey, that
could be MiNT!).

One bug -- it cannot delete directories, because it calls Ddelete()
with a pathname with a trailing '\', which has always been illegal,
but always tolerated. Until TOS 4...

ATARI MEGA/4 STE FOR SALE

The following system is for sale. If interested please

send e-mail with questions, offers, etc, to

ad533@yfn.ysu.edu.

Mega/4 STE

*4 megs RAM-2 years old-never any problems

*TOS 2.05

*internal DSDD floppy drive

*internal Seagate ST157N 50 meg hard drive-no bad sectors

*external DSDD floppy drive

*the Link-allows you to hook up any SCSI periperal to Mega

Monitors

*SC1224 color monitor

*SM124 mono monitor

*Monitor Master-allows you to switch between monitors

I can fill the hard drive up with PD and SW programs.

Swiftcalc, Partner, DataManager by Timeworks, and

Pha$ar by Antic Publishing goes also, along with anything

else Atari I can find. (I might be persuaded to part with

my complete collection of STart magazines.)

Again if interested, send e-mail to ad533@yfn.ysu.edu.

Kevin

I was responding to other's post. I have not done anything inapropriate in
this newsgroup. So Mr. Censor have you notified the other posters?

I'm with you, Sinclair. Who appointed anyone as the Net Policeman, anyway.
BTW, as far as the Atari vs. Mac vs. PC debate goes, my read is this. Five
years ago, whenever anyone asked me what kind of computer they should buy, I'd
enthusiastically recommend an Atari ST. "Power without the Price," and all
of that. Today, I would NEVER recommend anyone buy an Atari computer, Falcon
or otherwise. They'd own an orphan, made by a company that publically stated
last week in the S.F. Chronicle (see my previous post) that they have "backed
away" from the P.C. market. I'm holding on to my Mega STe for sentimental
reasons, and if anyone can pick up a new or used on at a decent price, go for
it. It's still a nice machine, superior in some ways to the Mac.

>game that I have seen in a PD distributor. I have looked but can
>not find the afore mentioned game.

I have ported Galactic Empire years ago (to ST basic ;-) from the C-64 version,
but it does not include a nullmodem option, players take turn at the keyboard
and what is typed does not appear on the screen. Graphics are limited to an
ascii starmap. Maybe I'll write a better version in the future. There may be a
more advanced version in the PD, I don't know.

>BTW can anyone tell me anything about Storm the new licenceware
> game that's supposedly like Gauntlet but in a Alien atmosphere?

It is reviewed in Atari ST User. From the looks of it, it is like Space Crusade
in 'map' view where graphics are concerned. But it isn't a boardgame like Space
Crusade, but an action game, a bit like gauntlet I think (one-player I think)

Erlend.

Open up the unit and in the power supply area are two fuses. One is probably blown. Replace it. If it blows immediately when you turn on the monitor then keep looking, but I've done this to three SM-124s and all are still working, (I haven't had to do this in the last two years)

Brian

P.S. make sure your monitor is unplugged, and only use non-conductive (non-mettallic) tools inside the power supply area.

Tuneup had its problems (was commercial too - don't know if that early version is freely available BTW). Checkdisk can't fix cross-linked automatically, but if you can identify one of the cross-linked files and erase it manually, you're left with either lost clusters, which can, or a truncated file, which can also be fixed. Checkdisk is at least reliable in what it does. Knife v1 was released as free-demo-coverdisk some time ago, but it too has the failing of not handling BGM partitions (though it "tries"...).

>even if it's never getting released.....he got it of a BBS in Germany?
It was on several BBSs. The word went out it wasn't PD and most removed
it. I had a long chat with Insignia in the Uk about it. They were kind
enough to help me get the 'copy' I had up and running. It works and works
well. On a Falcon, the Norton SI is 0.7.

I don't want to start any blasphemous rumours,

3491. new game upload

Newsgroup: comp.sys.atari.st
Date: 1994-02-21 20:47:58 UTC
From: vicb@clark.edu
Message-ID: <2kb6lu$1g2@clark.edu>
Source record: 192398

I've just uploaded the demo of my recently-completed game, WingLord.

It's similar to Joust in concept (no pterodactyls or eggs, but a
couple of new twists), and it's been tested and runs on all
Atari 68K systems (incl. TT, but it needs to be patronized a bit...),
though it's intended for machines with DMA sound.

Uploaded to atari.archive, ftp.cs.ruu.nl, ftp.uni-kl.de, and a couple
others as well.

Hope someone enjoys it.

> appears to have a clue.

The Tramiel sons have been running the company for a while, which seems to correspond to the declining days of the ST family. It may be that Sam has pushed the other stooges aside and told Dad to take a hike, but Jack is still the major stock holder and the company is still controlled by the same characters as before.

The inital realease stuff did seem to be better organized than previously, which might have meaned that Sam had gained a clue or that they brought in someone to manage the product strategy. Take your pick.

Oh no, look who's back! :-(

> Who's going to develop these multimedia apps on the Jaguar/Falcon? The
> market has consolidated into the PC and Mac.

If there's enough of a market, there will also be developers. And the Jaguar has a huge potential market. Something a company like Id Software (Doom) has already smelled. Others will follow, I'm sure. And the Jaguar is not limited to games you know. When the concept of multimedia makes a general breakthrough, the Jaguar will be there to handle it at low cost.

> Am I missing something? The Mac is not suitable for the home market?

: TOS's might not have this problem, I'm not sure).

[stuff deleted]

Actually, from the experiences I've had installing IBM floppies in STs, I
have found a fairly easy way to hook up any drive.. Most IBM drives have a
'disk ready' switch either beside the write protect, or the HD switch.. If you
either cut the pin, or open up the switch, so it always looks like the disk
is in, the drive will perform media changes, properly...

Sorry, but this part is pure nonsense. FPATCH2 contains, apart from the Bconmap fix, a sound initialiser that is required for some programs to run properly on the Falcon. Therefore, it DOES make sense to use BOTH programs. The reason to use BMAPFIX2 is to get a safer and better fix for the Bconmap call as pointed out in the docs. I don't know what you mean with "silly programs". I use it mainly to run the Semper mailer and it's not silly in any way, I can assure you.

> first developed for the old Commodore C64 :-).

Not quite. Elite was first developed for the BBC micro, an early eigthies
british home/school computer if I remember correctly. Rumour has it some people
bought the computer just so they could play this game. :-)

Later versions appeared for almost every other major computer including the
Spectrum, C64, PC, Amiga and Atari ST.

Btw, the newsgroup rec.games.video.atari is much better suited for discussions
about video games in general and Atari games in particular.

Yeah, I also got the same problem! I still need the sound cpx though, so
where can I get it?

Actually using the Desktop's format option under Tos 1.4 and later, you do
get a perfectly IBM readable/writable diskette. Apparently all it was missing
in the first place was a single measly media descriptor byte.

Just a hint to anyone else, if you will be using the disk more from the IBM,
do not format it with twister. PC's bios/dos (not sure which is responsible)
is faster at reading a disk without sector skewing.. the twister disks are
actually slower access (on the order of double time obviously) on most of the
PC's I have taken ST disks over to.

What's up with Atari. I ordered a Falcon from my local dealer almost 2 weeks ago and it still isnt here. Supposedly it was out of stock. I dont know if that is bad or good. Bad cause I don't have it or good cause that means they are seliing. It was the 4 meg 85HD version. He called three different suppliers and none had them. They had the 1 meg no HD and other variations but not what I wanted.
As for those who talk about a Power PC machine, If I wanted a PC I would have joined their message base. I want a TOS machine and even If the Falcon isnt the top of the line machine these days, it is a faster machine than my STe.(A faster TOS machine)

Well, I got a working one from an older copy of xcontrol that I had (v. 1.0).
As you seem to need it, I'll stick it on ftp.math.fsu.edu (192.12.122.28). It
will be in /pub/atari.

Toad computers (1-800-448-TOAD) sells a couple of different types. Other
folks should at least have the Monitor Master, which does have stereo
output. Hope that helps.

>color mapping is pretty strange as well .
>I think it may be a bug in 2.2 since 2.1 worked OKay.

Actually, it turns out that a suggestions made by someone here resolved the
problem. The particular installation of PageStream was done by copying the
files from a monochrome ST system to a Falcon via a Syquest cart. That
meant that the PGS2.INF file was created on a system that HAD to have all
the color registers set to black...

The solution was to blow away the PGS.INF file, then launch PageStream and
let it rebuild the file automatically. Voila. PGS now runs in color.

Source record: 192538

Okay, a simple solution for the problem:/

Not _all_ PC's will read ST disks. The newer the machine, the better the chance of a PC being able to read it.

A lot of PC's I've seen are incapable of reading Twisted/Skewed (Fast Format) disks, and the majority are incapable of reading 10 sector per track disks (Except for a lot of the machines with High-Density drives, which must be capable of reading (I think) at least 16 sectors per track in order to get the extra 720K.

Usually the easiest, and most efficient way to get files transferred from an ST to a PC is this.

Format a disk on the PC in 720K mode (Something like FORMAT /F:720 type FORMAT /? for more information).

Copy the files onto the disk from the ST, and then read them with the PC.

If the machines aren't in the same building, this can be a problem, so using something like DC-Format on the ST to format the disks as:

9 Sectors Per Track
80 Tracks
2 Sides
Standard (Non-Skewed) sectors.

Then write an MS-DOS boot-sector to the disk. (BTW, Anyone who doesn't have DC-Format should get it, it's 'Write Bootsector' option has all sorts of handy uses!).

Using this has never failed for me.

There is a utility for the PC, filename something like ATARIDSK.??? which allows a lot of them to manage some of the slighty more non-standard formats (Skewed sectors etc.).

This util' _should_ be in the ./atari/Diskutils directory at atari.archive.umich.edu

Hopefully that is of some help.

I can't remember who'd asked about this before, but after talking with others who are using their Falcon030s for 8-track digital audio, I can assure you that you don't need a 1800K/sec. fast SCSI-II drive to do it. I talked to one person who was using a Maxtor 7213 and Rodime 3058 regular SCSI drives and has no problems doing 8-track digital audio on them ("as long as I keep them defragged"). I've asked him what the data transfer/seek rates are, but haven't received a reply yet.

Yes I have also started using it. The arrow keys are usable by the thing
that you mention next:

>OK, here's what you do: Press both shift keys at once. That's it!
>Now none of the hotkeys will work!

>I wish the programmer had realized how important control keys are to
>modemers and had stuck to alt-key combinations for his hotkeys...

Yes agreed. There are very few BBSs even that don't require control-key
combinations somewhere in there message editors. As for Other online
systems, it is very necessary.

>It is a bit buggy in places, though... The redialer and the font at
>the bottom of the screen cause me no end of grief... And the capture
>buffer is always set on unless you manually turn it off... It just
>seems that some settings are bass-ackwards...

Yeah, I can see why he's done this though. In the manual he states that
he started out writing a term program that was easily useful for
novices, but also flexible for those who want more power. I guess it
is a matter of opinion what people want as a default. Anyway you can
save your settings!

My brother (we're a family of Atari wonks!) recently bought a Casio CTK1000 keyboard to use with his STE (2mb) to begin to play with the rudiments of MIDI. He's a bit of a neophyte with MIDI (I am too, actually), and he therefore needs a bit of help...

Therefore, any recommendations as to software (PD or Inexpensive--he knows about and can't afford Cubase) or as to whether this is a proper keyboard for basic uses (at $350, it was right w/in his price range), will be greatly appreciated.

Thanks a lot.

Hi,

I used to succesfully apply the following trick:

Start Norton Commander on a PC in maintenance mode (-m) and modify the first
three bytes in the boot sector.

How to modify them? Examine the first three bytes of a disk formatted
on that PC. I had acces to a PS/2 and there I had to write

EB 34 90 or something like that.

> Unix, OS/2, Nextstep...you name it (OS), it could be written for it.

Oh c'mon... The same can be said for *ANY* processor. PPC is nothing special, it's just a processor! OK? So enough with those silly rumors about PPC being able to emulate everything under the sun. That's just patent nonsense! THERE IS NO HARDWARE EMULATION OF ANY TYPE IN THE PPC!!! Period! For goodnes' sake the PPC is not even compatible with itself let alone other processors! It can't even emulate the Power 6000 without software!!!

People, please read the spex before playing into IBM's hands and spreading this false propaganda. I wrote a message about this a couple of days ago - maybe it got lost so here it is again:

Don

donm@ucon.gun.de
donmaple@cix.compulink.co.uk
Don_Maple@kr.maus.de

--- cut -------------------------
I'm slowly getting a tad furious ;-) with all these PowerPC groupies. I wonder how many have actually bothered to check this processor out before drooling. So, here's a reality check.

First of all, we have to remember that in spite of being made by Moto (traitor! ;-) the original design is IBM, ergo - garbage by definition, particularly in the areas of software and hardware. Other than that, it's OK... :-)

When it comes to instructions PPC (PowerPC) is a mess! As I wrote in my local box recently, there are three types of problem instructions on the PPC :

1. 38 unimplemented Power 6000 instructions which must be software emulated by 601/3/4 and 620+

2. 20 Power 6000 instructions implemented on 602/3/4 which subsequent PPCs such as 620 will not have and would therefore have to emulate

3. 47 instructions which 620 will have but 601/3/4 do not and some instructions must, again, be software emulated.

And, of course, only a bozoid the magnitude of IBM can call a processor with 200+ instructions a "risc".

On the hardware side the PPC looks impressive for about an attosecond.
True, 601/3/4 have the 88110 bus (Moto's own Risc) but 620 (and presumably
up) have a different bus. In "true blue" tradition the processor is
incompatible with itself which means you can forget any easy processor
upgrades. (Don't bother telling me 620 is 64-bit, I know.)

Hopefully this will help cut down on PPC salivation. Please send flames
to advocacy (I don't read it) otherwise they will be gleefully ignore.

I wonder why Atari can't supply hard-drives and tell you to go to
Aus Tech P/L?

: Not acording to Bob Brodie, Atari OZZ made a profit last year..???
: and a few people here have been talking to them, dealers users etc....

Selling what? Atari 2600's? Lynx's? There the only two items that
seem be stocked in mainstream stores. Certainly not the Falcon, or
to a large extent now, the Atari ST range. Lynx games are usually
in the bargain bins, along with the C=64, Atari ST and old Amiga 500
games.

Ask the Candians when they're going to get their Jaguars. Then ask
yourself if the Australian/New Zealand market is any bigger, or going
to be more profitable.

> Thanks very much.

> Andrew Sage

If you download the file from the FTP site you have some options to fit it onto
several 720 Kb disks:
- uncompress on your site and recompress it in several smaller files.
- use the UNIX-commands 'split' and 'cat' to split it.
(cat to reassamble it, you need cat for the atari though)
- UUENCODE the file. Split it in several files. (Compress them)
When at home, uncompress the files, make one UU file (if you have
a hard disk) and UUDECODE them.

Good Luck.

I'll be the first to admit that Commodore haven't advertised much in the past
, but then neither have Atari . When it comes to the CD32 , it is a different
story (well , it is here in Europe!) the CD32 has been advertised on T.V and
satellite (MTV Europe) and on billboards (like the one outside Segas European
HQ ..."To be this good will take Sega ages..."). It has also been reviewed
etc in gaming magazines (not just Amiga magazines) . The opposite is true
of the Jaguar . It hasn't been released over here ....well, if it has , it
isn't being advertised anywhere , nor do any large electrical or computer
stores sell it .
I believe that Commodore's Ad campaign will be lower key in the U.S.
but this won't be due to C= not knowing how to market machines , it'll be
due to lack of financial resources . (money...something Atari don't have much
of either) . However the money they are making will probably partially go
towards advertising in the U.S (not just in AC and Amiga World)
At first the U.S Amiga mags will be the only place it is advertised
but it will catch on... (it is a nice earner for C= here in Europe).

Jerry,

Well, he does have a few valid points, but in general I think he's
just blowing his horn. I'm not a programming expert, but I've read
the PowerPC instruction set and architectural definition. I know and
understand the hardware interfaces of the 603 and 604 enough to be
considered an expert, and I spent nearly 3 months studying the 620's
bus. I'll try and respond to Mr. Maple's comments by interleaving
mine with his. You may post this to the Atari newsgroup if you'd
like, but be sure and preface it with this paragraph. The views that
I express are my own and are not the official views of anyone other
than myself! ;-)

BTW, I will not be available to respond to any follow-ups to what I
say here as I am leaving at noon on Tuesday to fly to San Fransisco
to attend the WinHEC '94 at the Musconi Center.

I saw the very first 603 run on a printed circuit board. I saw the very first 604 run on a printed circuit board. (No, that's not a typo.) I think I have a pretty good idea of what kind of performance these chips are capable of. I'm drooling all the way to the stock broker to buy as much Motorola stock as I can. (Of course, Motorola stock prices are mainly dominated by the Communications Sector. That's my reality check!)

>]First of all, we have to remember that in spite of being made by
>]Moto (traitor! ;-) the original design is IBM, ergo - garbage by

>]Other than that, it's OK... :-)

Thanks for the vote of confidence for Uncle Mo! The 601 instruction set was defined by IBM. The 601 is a one-chip implementation of the 9 (?) chip implementation in the original Power processor found in the RS/6000 workstation. I believe that the 601 did not implement ALL of the Power instructions.

The PowerPC architecture and instruction set was co-developed by IBM, Apple, and Motorola here in Austin. The PowerPC instruction set is a subset of even the 601 instruction set. Therefore, the 601 has several instructions that are not part of the official PowerPC instruction set. I guess the architects deemed that they weren't necessary at all or were used so seldom in systems that emulating them with a handful of alternate instructions wouldn't hurt overall performance any noticeable amount. Also, some of the instructions were tossed out because they used microcode or could not be "sped-up" by utilizing super-pipelining and/or super-scaler techniques.

So maybe some of the "garbage" was tossed out. I would think that the savvy software writers would avoid the "601-only" instructions so that it will also run on the "real" PowerPC implementations without any tweaking.

Also see above. BTW, what's a 602?

>]3. 47 instructions which 620 will have but 601/3/4 do not and some
>] instructions must, again, be software emulated.

I must confess that I didn't read all of the 620 Book IV document (which
describes the instructions that that processor implements in addition to
the PowerPC required instructions), but I would tend to think that Don
is referring to the 64-bit instructions.

>]And, of course, only a bozoid the magnitude of IBM can call a processor
>]with 200+ instructions a "risc".

At first reading the PowerPC instruction set looks awfully big, but then
you realize that the "Load 16-bits" instruction is listed separately from
the "Load 16-bits and Zero the upper 16-bits while you're at it" instruc-
tion! There must be well over a dozen "Load" instructions and well over a
dozen "Store" instructions! Anyone familiar with the 68000 assembly
language mnemonics would find this rather strange (the 68k User's Manual
described the MOV instruction as a single instruction).

>]On the hardware side the PPC looks impressive for about an attosecond.

>]upgrades. (Don't bother telling me 620 is 64-bit, I know.)

You are correct about the bus on the 60X devices. It is a "split" bus
where in a multiprocessor environment it is entirely possible to have a
seperate master of the address bus than the data bus at any given time.
The 60X bus is a 64-bit data bus that is "flow controlled" by the memory
subsystem. The 620 bus has a 128-bit wide data bus that is "flow controlled"
by the data provider (620 on a write, memory on a read). Furthermore,
the 620 bus is a "split transaction" bus where the processor puts out
a "tag" during the address phase, and when data is returned on a read
that has that same "tag", the processor knows that that data is what
it asked for earlier. Several bus cycles may be "outstanding" on the
bus at any one time. No, this 620 won't be an "overdrive" for a 60X,
but BFD. Sometimes to make a quantum leap in performance, you have to
break from the past. Anyway, the end user and programmers will never
know. (Which 68k devices would work on the same bus?)

>]Hopefully this will help cut down on PPC salivation. Please send flames
>]to advocacy (I don't read it) otherwise they will be gleefully ignored.

Maybe, maybe not! It's going to be a VERY interesting year. ;-)

Ofir meant the GEMDOS call Malloc(), not the libc malloc(), by the
way.

Each extra 'folder' added only takes up 132 bytes or so, so you can
quite happily added 2-300 folders without worrying about wasting memory.

Well, I think this topic is of interest! I, too, have a Falcon at college and have the option of an ethernet port. I believe that there are no internal ethernet cards available for the Falcon (anybody?), but wouldn't it be possible to use an external ethernet box with the SCSI-2 port on the Falcon? I know it would cost more (much as external hds do). Are there any programs for the Falcon such as Fetch for the Mac which would make FTPing much easier?

Hi there,

In some UK Magazine I saw adverts of STfm/STe mother boards.
They are only 49.99 UK pound (First Computer Centre),
I wonder if the mother board comes fully equipped with all
the chips, less the RAM memory of course, and I wonder if I can
swap a 1040Stfm with a 1040 Ste board directly using the same
Power Supply, Keyboard, Floppy, mouse, video and case (maybe
drilling it a bit..)?

: >3) Is there any advantage in getting an internal HD drive, given that
: > I have pleny of space on SCSI externals?

You get considerably more software from Atari if you buy a Falcon with an
internal Hard Drive. In use, the IDE's are usually slower than an
exeternal SCSI. (obvioulsy this depends on individual drives and the
operations expected of them.

: Other items on my shopping list would include NVDI, SVGA monitor,
: screenblaster or hardup.

Marcel 2.2 has been released as shareware! Personally, I thought
that it was worth the commercial price. At the time it was very
nice being able to take my files from my 1 meg STe and go down
to the school's computer cluster to print them out from MS Word
on a laser printer! I still use Marcel to do my word processing
and only use AtariWorks to print. Marcel is quick while Atariworks
sometimes needs to "catch up" to my typing, even on a single-tasking
Falcon. Any owners of Marcel 2.1 get the upgrade to 2.2 for $1!
sincerely,
scott tirrell

Specially to Alan Parker:

It has been achieved for long by European coders: left, right, top and bottom overscan as well as full-screen (all directions at the same time). The first full-screen (by Level16 in "The Union Demo") featured only a little sprite, soundchip-music, and vertical scrolltext. The latest versions of such screens featured hardscroll, soundtrack at 16Khz, big sprites, even 3D-full graphics !!! Get demos on FTP, you won't regret it!

3564. Overscan on the desktop on a Falcon

Newsgroup: comp.sys.atari.st
Date: 1994-02-22 15:44:58 UTC
From: bourlon@gla.ecoledoc.ibp.fr
Message-ID: <2kd99q$ped@vishnu.jussieu.fr>
Source record: 192421

I don't remember the exact position of the parameter to set. So, proceed
like this:
Save your desktop in ST-LOW. Search in your newdesk.inf for the
string:
00 A2 if you've got a color monitor at 50 Hz
00 82 if you've got a color monitor at 60 Hz
00 12 if you've got a VGA monitor

Reboot, and save THE SAME DESKTOP CONFIGURATION, but in ST-MID. Normally
the only change in your newdesk.inf file should be the string you found earlier,
and it should be
00 A9 if you've got a color monitor at 50 Hz
00 89 if you've got a color monitor at 60 Hz
00 19 if you've got a VGA monitor

If you fail, stop here.

Otherwise, now that you've got the good number, save your desktop as
you like, but in the video mode you want to "overscanize". For example,
640x200x16 colors. Now, your newdesk.inf should have a new value. Just replace
the former 00 by 01. That's done.

If ever you misacted, and your Falcon bombs when you boot, press control
during the boot-sequence, until you get the desktop, then erase you newdesk.inf

That's all folks.

By the way, the best mean to get GREAT video modes is to use
FalconScreen from Martin Backshat if I'm not wrong, or better, my own version.
For example, I always work in 800x288x16c, which is REALLY good. Too bad I
haven't spread it yet, but it'll perhaps be done in a near future. Only if
people are interested, of course.

Hello to all Falcon owners in the world.
You've got a very good machine, but there are very few games on it.
That's why I decided to make games on the Falcon. But I don't want to sell them, coz games I want to code must have too expensives licences (SuperBomberMan, StreetFighter II, etc...)

In a few days, I'll be able to start coding all my time. I will do DynaBlaster/SuperBomberMan on the Falcon. It won't be a shareware, since I haven't bought the rights! But I plan to do an EXACT conversion of the SuperNes game. But I would like to know if I can hope making money - I have to live, U know? -. My aim is to offer the best at the lowest cost: no licence paid, no distributors, etc... That's why I would know how many people would pay if I do such things: remember, it wouldn't be sharewares, only public domains, and money I would receive would be gifts... I was thinking of 20$ gifts, for "per-fect" conversions...

The aim of this letter is to ask Falcon owners how many Falcon owners they know would pay for games. I mean, WOULD pay really! And, also, make a little survey to know which games are most wanted on Falcon.

Thank you in advance.

I have been considering writing a sort of conversion to that game on the ST. However I lack the knowhow on how to do some of the more advanced effects (falling dirt, "fractal" explosions, etc.). It IS an incredibly simplistic game, and a whole mess o' fun playing with other people... I may attempt an ST conversion, but perhaps I'd be better passing it along to someone who's better qualified to handle the more intricate routines...

Two weeks is blazing speed for getting Atari products. Amazingly, marketing
techniques which other companies believe are unacceptable are considered
standard in the Atari world.

> As for those who talk about a Power PC machine, If I wanted a PC I
>would have joined their message base. I want a TOS machine and even If the
>Falcon isnt the top of the line machine these days, it is a faster machine
>than my STe.(A faster TOS machine)

Actually the Falcon is a PC (Personal Computer). And some Atari computer
may use the Power PC chip in the future. TOS is just the operating system
and could be ported to many computer architectures. Like Univell's UNIX
operating system, TOS is written mostly in C. With much less effort than
was required for the 68000, Atari could move their incantation of TOS to
the Power PC, Alpha, or the Jaguar CPU. Actually TOS was available on the
Intel 80x86 based machines before MS Windows was available. Unfortunately
Apple sued DRI over the trash can, and severely crippled the future of DRI's
TOS.

My point is that people tend to associate the operating system and the user
interface with the hardware. So someone, like my wife, may see a nice color
point and click interface on an Apple computer and say, hey that's a really
good computer, look at those colors/pictures and the mouse interface; when
really all of those things are on lots of computers and exactly (for the
MacIntosh) on the Power PC. If you look at my .signature, you'll see that
I am horribly biased too. :-)

>Probably... [g]

VDI_FIX.PRG fixes a bug in the handling of virtual workstations.
The VDI manages a linked list of virtual workstations, and if
sevaral virtual workstations are opened and then closed in a
certain sequence, the VDI messes up the list and keeps passing
out the same virtual workstation handle upon all subsequent
v_opnvwk() calls. This bug is only present in certain TOS
versions, I think VDI_FIX checks the TOS version first and
installs the patch only if needed.

Message-ID: <1994Feb22.162537.19608@porthos.cc.bellcore.com>
Source record: 192428

I was having problems with disk A of Amberstar (needed
to use the install program) with read errors. So I decided
to try to copy files to a blank disk that needed formatting.
Through a combination of idiotic moves I un-write-protected
disk A and proceeded to format it, thus solving my read error
problems but good. I called the vendor who sold it to me
(TOAD Computers - very good people, by the way), but they
have nary a copy, though they will try to procure one from
England in a later shipment. They suggested I might get
help from a bbs service, so I'm trying the net. Would one
of you be willing to receive disk A (the original obviously
or I wouldn't be in this mess) and a couple of $ to
cover shipping and copy disk A for me?

Well, other RISC processors exist and they are also impressive.
As far as I know (I don't know much about 60x, x>1), except for
marketing reasons, the PowerPC doesn't have much more potential than
POWER or MIPS or ALPHA or HPPA or SPARC or ...
Especially given that the architectures are basically very close (same
number of registers same kind of addressing modes, ...)

> >]First of all, we have to remember that in spite of being made by
> >]Moto (traitor! ;-) the original design is IBM, ergo - garbage by
> >]definition, particularly in the areas of software and hardware.

Hahaha !! good start !
What exactly do you know about IBM's prestations except being the
originator of the big PC-mess industry (I know IBM should be ashamed
of that, but he's not the main reason of the mess: he never intended
to used the ISA-bus with a 386, for example)

> >]When it comes to instructions PPC (PowerPC) is a mess! As I wrote in

> >]on the PPC :
> >]
> >]1. 38 unimplemented Power 6000 instructions which must be software
> >] emulated by 601/3/4 and 620+

Well, given the PowerPC is supposed to be another architecture (though
partly compatible), it's not that bad: MIPS code is much harder to
run on a SPARC station, for example.

> >]2. 20 Power 6000 instructions implemented on 602/3/4 which subsequent
> >] PPCs such as 620 will not have and would therefore have to emulate

see above

> >]3. 47 instructions which 620 will have but 601/3/4 do not and some
> >] instructions must, again, be software emulated.

Is upward compatibility a bad choice ?
Do you mean the PowerPC should be totally frozen and never evolve ?

> >]And, of course, only a bozoid the magnitude of IBM can call a processor
> >]with 200+ instructions a "risc".

Hahahaha !!!!!
One more "sentence of the week" !
Only an total ignorant of computer architecture could say that !

- First: how do you define the number of instructions ? don't forget the
68030 has about 50 opcodes and 50 addressing modes, so that it's
number of instructions is of the order of 2500 (well, some
instructions don't allow all addressing modes, but others can combine
two of those addressing modes so I think my estimate isn't so far from
reality). That's 10 times more !!
- risc isn't about the number of instructions but about the kind of
instructions (especially the addressing modes). Most other RISC
architectures also have between 100 and 200 instructions.

> >]On the hardware side the PPC looks impressive for about an attosecond.
> >]True, 601/3/4 have the 88110 bus (Moto's own Risc) but 620 (and presumably
> >]up) have a different bus. In "true blue" tradition the processor is
> >]incompatible with itself which means you can forget any easy processor
> >]upgrades. (Don't bother telling me 620 is 64-bit, I know.)

So blue tradition is "incompatible with itself".
Of course, that's why the 360 architecture is more than 30years old
and still selling.

Oh well, he probably believes that pentium is a CISC processor with a
RISC implementation !

There are quite a few accelerator cards for STs including 28 & 36Mhz. Reasonably priced and with NVDI, it makes a hell of a difference..

In <PERBANDT.94Feb17185531@sv5.mch.sni.de> perbandt@sv5.mch.sni.de (Perbandt.Adalbert T 7651 R 92-508 WS tx30) writes:

>My problems:
>The bash does not execute the startup file .bashrc located in my home
>directory. [...]

This problem, as well as a few others that you describe, might be caused by the UNIXMODE environment variable not being set. Try "setenv UNIXMODE /rU" in mint.cnf (oops -- mint.cnf doesn't use csh syntax, but you'll figure it out).
A few words of explanation: UNIXMODE is a hack that is supposed to add features like long file names, case sensitivity and some others to the TOS file system. This doesn't involve any tweaking of the file system itself, rather, an additional layer of interpretation of file names is established by the library functions for file access. These library functions can make up short "TOS-ized" file names for long file names, create a special file called .dir where they store the mappings between UNIXMODE and TOS file names, convert slashes to backslashes and so on. These features are activated by setting the UNIXMODE environment variable. The characters for the UNIXMODE variable suggested above mean:
/ : allow '/' to be used instead of '\'
rU : use U as root drive (i.e. let /foo.bar mean U:/foo.bar really.
For a complete description of UNIXMODE see the file UNIXMODE.doc in the mintlib (or gnulib) sources.

>Furthermore bash does not recognize the executables located along the $PATH.
>$PATH is initialized to \bin in C:\MINT\MINT.CNF. I change its value
>to something like "/bin:/usr/bin:/usr/local/bin:/usr/local/emacs/etc"
>(maybe not all these directory are physically existent this time) but
>no one of the executables spread over those directories is recognized.
>Currently the only way to execute a program is to type its absolute path.

Check the docs that came with your bash port. There ought to be something said about how the port deals with the problem that you have to specify a drive along with the path with the drive letter separated from the path by a colon (as in "c:/bin"), but the list in the PATH variable is supposed to be colon-separated. I only know about the tcsh port, it uses the prefix "/dev/X" instead of "X:" to specify a drive, thus eliminating occurrences of colons within elements of the path list. This way, the colon can still be used as a separation character.

>The tilde-character "~" is not properly initialized. My $HOME is
>/usr/users/ad and "~/file" expands to something like "/usrusersad/file".

This looks like your slashes are treated as escape characters.

>The gcc2.2.2 crashes during preprocessing a simple "hello world"
>program (have already downloaded gcc 2.5.8 but not tried yet).

What are the symptoms of the crash (bombs, error messages...)?
gcc 2.2.2 is not quit up to date, but it worked to compile more
than a "hello world" for me.

>All that together is really frustrating, isn't it?

Yep. But don't give up, keep trying. Believe me, the result is
rewarding.

Granted, you will never see Microsoft Word for an Atari, but it is simply not true that software is non-existant. The problem is that you often cannot choose from brands; and in several areas, there is almost no software at all (I've seen hardly more than 5 molbio programs for the Atari).

I was wondering if there are any programs and/or libraries out in net
land that offer more (different) icons on the desktop (tos 2.06) than the
standard that comes with the ST.

Wondering...

Subject: Need documentation on Atari ST

I know nothing about Atari computers, but my brother in Denver has
an Atari ST and asked me if I could find a source for the following
documentation.

Video Tutor I. He said he already has Video Tutor II.
Beginners Guide to Atari St.
How to use Video word writer.

Any source near San Jose, California, or Denver would be
appreciated. Thank you.

>The game seems to assume we all run in NTSC ... tss tss ... those americans ...

Yeh, how dare those Americans only write games that work on 'their' television standard. After all, any public domain or shareware Atari programmer should be forced to run out and buy PAL, SECAM, SECAM II, and _any_ other TV standard to be sure of supporting all Atari users around the world... all 500 of 'em. :)

Give him a break, Rickard. I agree that PAL is a _much_ nicer standard than NTSC (Never The Same Color) but it's unreasonable to expect such demands from hobbyist programmers, don't you think?

Would that we HAD only one broadcast standard... and one line voltage rate... and one universal system of measurement... and one... (ad nauseum). Of course, then I reckon the world would be a tad bit more boorish, eh?

Cheers,

>
>What real advantages would upgrading to TOS 1.4 do for me???

Gee, it's been so long since TOS 1.4 (more accurately, 1.04, but who cares?) was introduced I've forgotten most of it's features. But as memory serves, it corrected most of the more annoying bugs that existed in TOS 1.0 and 1.2. I don't honestly recall if it took care of the 40 folder limit, but I think so. It came with a much improved file selector dialog (although still far short of Universal Item Selector, IMHO) and improved hard disk and floppy disk access. I remember it eliminated two disk swaps when doing a floppy disk copy when you have only one drive (argggh! very painful). I'm sure others here can reiterate the features 1.4 includes. I do recall, however, that I thought it was _well_ worth the upgrade price at the time. Of course now, I'd recommend going with TOS 2.06, even if you have to buy an adapter board (like the TEC from CodeHead) as I reckon it's well worth it.

Just my $.02 but I'd say definitely upgrade your TOS 1.0 to 1.4 or 2.06.

I successfully used my drive f: for a minix partition for 6 months. My hd is formatted with AHDI ver 5.? Did you try accessing the minix partition from Tos without running Mint? I think the docs warn against that-it corrupts the partition. Try zeroing the partition or backing up to floppy and then reformat the whole hd. I know you don't want to do that, but...Or maybe you were just unfortunate enough to find a weird bug!

>Could someone please tell me how I can create a signature in NEWS.

If you are using a UNIX based newsreader, then just create a text file of your desired 'signature' and save it to your home directory with the filename .signature (so that it's a hidden file). Whenever you send mail or post a message to a newsgroup, your system should automatically append the .signature text file to the bottom of your post.

But please... be nice and try to keep your .signature file to 5 lines or less, OK? Really BIG signatures are sometimes neat to look at for the first time, but get a quite tiring after awhile (especially for those who have to *PAY* for their net access). Thanks for your consideration.

Actually I was one of the foolish that bought Microsoft Word for the ST.
What a piece of ...

Of course that was many years ago, and Microsoft did not port the newer version to the ST, because sales of the original port were so bad. The really sad part was that the ST version worked exaclty like the Mac version! But that was the state of the art for the Mac.

So since we did not support their really mediocre (read horrible) version Microsoft will not support TOS/GEM.

Brian
